STATE OF VERMONT

S.115 - Prescription Drugs, Regulation

January 26, 2007

APPEARANCES:

ROBIN LUNGE, LEGISLATIVE COUNSEL

STEVE KAPPEL, JOINT FISCAL OFFICE

Job Number: 894085

PROCEEDINGS

CD2007-24_Track 1

MS. LYONS: Go ahead.

MS. LUNGE: You start.

MR. KAPPEL: Okay. I'll start.

With the Obligatory, Steve Kappel. And --

MS. LUNGE: Robin Lunge.

MR. KAPPEL: From wherever we're from this week.

MS. LUNGE: The pink lady.

MR. KAPPEL: From across the way.

So, this is either part two of a two-part presentation, or the second presentation, we're not sure which, about pharmaceuticals and various things thereof.

I brought copies of the handout from yesterday for folks who weren't in Finance. So, I can circulate a few around.

(Whereupon, copies of handouts were distributed, after which the following was had:)

MR. KAPPEL: And then before we --

UNIDENTIFIED ATTENDEE: We saw this one too.

MS. LUNGE: You did see some of these slides, yes.

UNIDENTIFIED ATTENDEE: Okay. We've seen some of them.

MR. KAPPEL: Parts of them.

UNIDENTIFIED ATTENDEE: Okay. All right. Sorry.

MR. KAPPEL: And then the other thing I have before we start the presentation is, there were a couple of numbers questions. So, I have here a sheet, which on one side is enrollment in all the state pharmacy programs. And on the other side are the ever popular FPL stuff. So, if you ever wondered what the family poverty level for 185% of poverty in a family of three in 2007 you will now know.

UNIDENTIFIED ATTENDEE: Okay.

MR. KAPPEL: Okay. Onto actual content.

Today's presentation.

UNIDENTIFIED ATTENDEE: May I ask a question about the family poverty level?

MR. KAPPEL: Oh, sure.

UNIDENTIFIED ATTENDEE: You give monthly and yearly. Are there federal programs that use one and then a different then for the other?

MR. KAPPEL: No. They all use yearly, but some people think monthly.

UNIDENTIFIED ATTENDEE: Oh, okay.

MR. KAPPEL: So, a lot of people would ask, well, what is that for monthly wage?

UNIDENTIFIED ATTENDEE: Oh, okay.

MR. KAPPEL: So that's why I just do it both ways.

UNIDENTIFIED ATTENDEE: All right.

MR. KAPPEL: So, the main topics of today's presentation will be, how do we save money in pharmacy programs and to what extent have we evaluated how well we've done that?

So, bottom-line, in order to achieve savings, you have to affect one of the three big drivers of pharmaceutical spending, which is utilization, intensity and prices. So, any -- any approach you're contemplating has to affect at least one of those. And it's actually better to affect more than one. Because what will frequently happen anywhere in healthcare is, you control one of them and the other one pops up to offset it.

UNIDENTIFIED ATTENDEE: Define intensity.

MR. KAPPEL: Intensity is the mix of different drugs that you're buying. So, the example that probably makes the most sense to people, prices. You buy the same groceries every week. The store raises its prices. You're spending goes up, even though you're buying the exact same basket of goods.

Utilization. You're having some friends over for dinner one night, so you buy some more groceries. So that's, utilization's a measure of how much you're buying.

Intensity's the mix of things you're buying. So,

you may switch from store brand tomato juice to fancy PhD organic tomato juice. That's a change in intensity. More to the point here, if you switch from aspirin to Cellbex, that's a change in intensity. And that switch can increase spending. Even if utilization stays exactly the same, one pill a day, prices stay exactly the same for both products.

UNIDENTIFIED ATTENDEE: Okay. Thank you.

MR. KAPPEL: Ways to achieve savings, as far as prices; you can reduce reimbursement. If you're the government, you can reduce reimbursement by law. If you're not the government, you can reduce reimbursement by negotiation. Or, you can increase rebates. And we'll talk a little more about rebates. Or, a third option, you can purchase internationally.

Important distinction; where exactly the savings are coming from. When the state, for instance, chooses to save money by reducing how much the Medicaid Program pays a pharmacy, the savings in that case come out of the pharmacist's pocket. If instead the state pays the pharmacist exactly the same thing, but manages to obtain more rebates from the manufacturer, then the savings comes out of the manufacturer's pocket. Real different consequences, local economy.

Important point to understand, how this stuff does

Page 6

1 savings, you have to move volume in order to do this. If
 2 you go to a manufacturer and say, I'd like a bigger
 3 discount, please, the manufacturer's likely to say, oh,
 4 that's very nice, thank you for your time. If you go to a
 5 manufacturer and say, I can move half of the business you
 6 currently get over to your competitor, then the
 7 manufacturer's a whole lot more likely to start talking
 8 discount. So, any way you want to reduce prices, unless
 9 you're the state and can do it directly, you have to be
 10 able to demonstrate that you can move volume around.

11 So, how do you move volume? Couple of really simple
 12 ways; a preferred drug list. One of the basic ideas
 13 behind a preferred drug list is, you steer people to one
 14 or more therapeutic alternatives. When manufacturers see
 15 preferred drug lists actually working, their market share
 16 starts to decline, their market share starts to increase,
 17 then they're a lot more interested to talk about price.

18 You can further move volume when you start
 19 consolidating your purchasing, so when state programs
 20 start mixing. If, for instance, the state employees and
 21 Medicaid use the same preferred drug list, that increases
 22 the affect of the list because you're buying for more
 23 people. Get even bigger state programs and private
 24 programs within Vermont; get really big multi-state
 25 purchasing agreements. So, when several states get

Page 7

1 together and talk to manufacturers, manufacturers tend to
 2 pay a lot of attention.

3 One thing you'll hear a lot of discussion about
 4 right now is, in Congress there's discussion of whether
 5 they will change the Medicare Part D Law to enable the
 6 government to negotiate directly with manufacturers.
 7 There's been a lot of difference of opinion among
 8 economists as to whether the government negotiating for
 9 what is a huge purchase will actually be able to negotiate
 10 better deals if they don't have a preferred drug list. If
 11 they say, we're just negotiating for all of the same drugs
 12 that are being sold now; I'm not sure what manufacturer's
 13 incentives are to give them better deals. But that's the
 14 thing that's gonna play out in Congress.

15 Savings on the utilization side; a couple of ways of
 16 doing this. Some states have things like brand name
 17 limits in their Medicaid Programs. So, this says, doesn't
 18 really matter how many drugs you actually need, Medicaid
 19 will only pay for three or five brand name drugs a month.
 20 So, it tends to truncate those folks who are taking lots
 21 and lots of different pharmaceuticals.

22 UNIDENTIFIED ATTENDEE: That seems a rather
 23 arbitrary way to -- to cut down on -- on costs. I mean,
 24 it's you're only allowed three, what are you supposed to
 25 do for the -- for everything else that you need?

Page 8

1 MR. KAPPEL: It's certainly not a way I would ever
 2 recommend.

3 UNIDENTIFIED ATTENDEE: Okay.

4 MR. KAPPEL: But some states do have that.

5 UNIDENTIFIED ATTENDEE: That just -- That seems
 6 bizarre to me. But, anyway. We probably
 7 see stuff like that, caps or rebates.

8 UNIDENTIFIED ATTENDEE: Don't health insurance
 9 policies do that? I mean, you get something.

10 UNIDENTIFIED ATTENDEE: I don't know.

11 UNIDENTIFIED ATTENDEE: Get care up to so many
 12 thousand dollars and then --

13 UNIDENTIFIED ATTENDEE: They cut you off in dollars,
 14 but not the number of brand name.

15 UNIDENTIFIED ATTENDEE: Yeah. But most of them have
 16 to be generic.

17 UNIDENTIFIED ATTENDEE: Right.

18 MR. KAPPEL: Yeah.

19 UNIDENTIFIED ATTENDEE: If it exists.

20 MR. KAPPEL: Generics or you just do without.

21 UNIDENTIFIED ATTENDEE: Or, if it exists.

22 MR. KAPPEL: Yeah.

23 MS. LUNGE: Yes.

24 UNIDENTIFIED ATTENDEE: Okay.

25 MR. KAPPEL: Okay.

Page 9

1 UNIDENTIFIED ATTENDEE: I wasn't asking you to
 2 defend it.

3 MR. KAPPEL: Not a problem. I wasn't going to.

4
 5 Other way to achieve savings and utilization is
 6 what's called prior approval. So, this is a process where
 7 for certain drugs, typically a focus process, a
 8 third-party manager of benefits typically has to approve
 9 the prescribing of that drug for that person. There'll be
 10 questions like, why does the person need the drug, what
 11 evidence do you have that the person has the condition the
 12 drug is designed to treat? It's just kind of a little way
 13 to step on the brakes slightly.

14 MS. LUNGE: We talked about this a little bit in
 15 terms of our current Medicaid preferred drug list.
 16 Because we -- why we have a preferred drug list, you can
 17 access drugs off the list with prior approval or prior
 18 authorization. So, it's the same sort of concept.

19 MR. KAPPEL: You can't have one without the other.
 20 But I think putting both together is probably the best way
 21 to approach it.

22 How to achieve savings in intensity. A lot of
 23 interest in this area right now, some pretty
 24 straightforward ways, mandatory generic substitution. So,
 25 just saying unless, as Vermont does, the doctor says

specifically fill the brand, pharmacists are required to substitute generic drugs where they're available.

Changing position behavior, a lot of this going on. Counter detailing. This is typically a process by which an academic group or some other credible organization goes into physician offices in an effort to offer a different opinion from what the marketing folks do.

Other kinds of feedback; sometimes docs just get reports how their prescribing patterns are different from their -- their compatriots.

Other way to do savings in intensity, change patient expectations. There's been a lot of discussion about the pros and cons of direct to consumer advertising. Clearly, direct to consumer advertising has an affect on patients. I would argue, the pharmaceutical manufacturers know this or they wouldn't do the advertising. So, one possibility, with some Constitutional questions is, to ban direct to consumer advertising.

UNIDENTIFIED ATTENDEE: Used to be banned.

MR. KAPPEL: Yes.

UNIDENTIFIED ATTENDEE: Or was it -- Was it voluntary or not done?

MR. KAPPEL: I think it was -- Do you know?

MS. LUNGE: I'm not positive. But if it was not allowed, it was at the federal level.

instance, Maine has a proposal that allows the Attorney general to pursue violations of the federal law relating to misleading advertisements, which is sort of the next step down from this, in terms of giving AG's enforcement in advertising areas. But I can double-check on that.

UNIDENTIFIED ATTENDEE: Okay.

MR. KAPPEL: Two other ways to deal with intensity, as we discussed before, preferred drug list and prior approval. I think the main advantage of those two is, they can affect more than one of the three variables; they can affect both prices and intensity. So, again, tools that affect more than one thing tend to work better.

The interesting challenge we face is, to evaluate the savings. Vermont has done lots of things. Other states are doing lots of things as well. It's hard to get real good credible evaluation of different programs. And we'll talk about why that is.

Probably two different ways of evaluating savings, one of which is to have a comparison group. So, for instance, subject half of Medicaid to a preferred drug list, the other half of Medicaid not, and then compare the drug spending. It's probably the gold standard, because it most clearly defines the effect you're trying to test and isolates all the other effects away from that evaluation. But it's almost impossible to do in an

MR. KAPPEL: It was federal law.

MS. LUNGE: And so there is federal law right now about what's allowable in advertising. And there are other options on the advertising front included that aren't quite as -- go this far.

UNIDENTIFIED ATTENDEE: Okay. How does the state do that?

MS. LUNGE: Ban direct. Well, that's where we get into the Constitutional questions.

So, --

UNIDENTIFIED ATTENDEE: The commerce clause.

MS. LUNGE: Yeah. So, --

UNIDENTIFIED ATTENDEE: Even if you could -- Even if you could do it Constitutionally, I don't know how stop various cable signals and magazine subscription sales.

MS. LUNGE: I think it's usually combined with some sort of right of action by the Attorney General to enforce it. So, they can sue.

UNIDENTIFIED ATTENDEE: Is anybody trying this?

MS. LUNGE: You know, I should -- I think Sharon Treat can talk to you a little bit more about that next week when she's here.

I haven't -- I can't recall off the top of my head if what other states have done in this area. There certainly has been action in other states in terms of, for

ongoing program. I don't think it -- You wouldn't do that kind of a laboratory model in an ongoing assistance plan.

The other big way is historical. Much easier to do, because you've got last year, this year, kind of spending comparisons. The limitation to historical is, it's much harder to look at the effect of your specific program as compared to all the other things that are going on.

Couple of other ways people have taken, and we'll have some examples of these in a few minutes; surveys, surveys of beneficiaries, surveys of prescribers. How have your prescribing patterns changed as a result of our program kinds of questions. Are you aware of, are you more likely to kinds of questions. But, again, those are once removed from what you really want to examine.

Last couple of issues, establishing causality.

Again, this is the problem of we have our program, the feds are doing something else, there's more broad system changes going on that nobody quite knows the reasons for. So, isolating what we're trying to look at gets tricky.

There's also a question of scope. When you evaluate the savings in a pharmaceutical program, do you look at just the savings inside the pharmacy budget or do you also look at potential what are called spillover effects? Have I saved \$100 million dollars in my pharmacy program to

Page 14

1 increase my spending on physicians by \$120 million? Gets
2 a lot more complicated, but it's probably a more valid way
3 to do an evaluation, if you can figure out, again, all the
4 causal effects.

5 So, to give a little structure to the rest of the
6 presentation, we started making a list of all -- Yes.

7 UNIDENTIFIED ATTENDEE: Excuse me. I think stepped
8 out for just a second. I apologize. You may have talked
9 about this.

10 Included indirect effects, like increased physician
11 costs in prescribing. What are the costs like? And if
12 you already went through this in great length we'll talk
13 later.

14 MR. KAPPEL: No. No problem. I'm glad you asked.

15 Let's suppose you do something to reduce your
16 pharmaceutical spending, like that three- prescription
17 limit kind of program. And in response to that, people
18 get a little sicker, so they go to the doctor more, they
19 go to the hospital more. That's the spillover effect I
20 think we need to be concerned about, depending on what
21 kind of program we do.

22 UNIDENTIFIED ATTENDEE: So, it's costs for
23 physicians, not physician's, apostrophe S, costs?

24 MR. KAPPEL: Yes.

25 UNIDENTIFIED ATTENDEE: Okay.

Page 16

1 UNIDENTIFIED ATTENDEE: That's quite a disclaimer as
2 we start through these. But keep going.

3 MR. KAPPEL: I'm always pleased to explain how
4 little I know.

5 So, evaluation of preferred drug lists; probably the
6 most mature. Just as a reminder, preferred drug lists
7 focus on therapeutic categories where there's lots of
8 spending and multiple brands, so there has to be a choice.
9 Not much point in having a preferred drug list when
10 there's only one drug in the category.

11 There's a professional review trying to look at
12 safety and efficacy. And then once the alternatives have
13 passed those tests, the accountants come in and they start
14 looking at prices. So, two drugs, equally safe, equally
15 effective, the preferred drug list is going to try to move
16 people toward the one that costs less.

17 One issue we'll talk about a couple of times is, the
18 ability to compare efficacy. Because the FDA approval
19 process just looks at whether the drug works better than a
20 placebo, there really isn't a good way of testing whether
21 Celebrex is better than Vioxx or Vioxx is better than
22 Celebrex.

23 There is one program out in Oregon that's starting
24 to do this, and it's actually being supported by I think
25 seventeen other states at this point, trying to actually

Page 15

1 MR. KAPPEL: Yep.

2 UNIDENTIFIED ATTENDEE: Thank you.

3 MR. KAPPEL: Mischievous apostrophe needs to move
4 around.

5 Vermont has done lots and lots of things; the quick
6 list; preferred drug list; multi-state purchasing;
7 non-profit pharmacy benefit manager; some coverage for
8 over the counter drugs where they are prescribed by the
9 physician; generic substitution laws; price disclosure;
10 counter detailing; marketing disclosure; promotion of the
11 use of 340B providers, we'll talk about that in a second;
12 and re-importation, in particular, the I Save Rx Program.

13
14 So, given all of the things we've done, one of the
15 evaluation challenges is, all the things we've done. We
16 can say the aggregate, we've had all these neat effects on
17 spending, but we -- it's much harder to say, and 20% of
18 the effects is because of this and 5% of the effects is
19 because of that.

20 UNIDENTIFIED ATTENDEE: We know one of them that
21 didn't do anything, counter detailing.

22 MS. LUNGE: Because it hasn't been implemented.

23 MR. KAPPEL: Well, it has the potential to. The
law's in place.

MS. LUNGE: Right.

Page 17

1 give states information on head-to-head comparisons; this
2 drug is 20% more effective than this drug. Which makes
3 the preferred drug list process a little better informed,
4 because then you can think about whether it's a good or
5 bad investment, a 5% less for a drug that's 20% less
6 effective. You could integrate the efficacy information
7 more clearly.

8 Couple of things that have been done about preferred
9 drug lists. There was a JFO report four years ago now,
10 looked at the efficacy of Vermont's preferred drug list a
11 couple different ways. One of which was to look at a few
12 categories and look at the spending year over year in
13 those categories where the preferred drug list had kicked
14 in, and there was substantial savings. They looked at
15 antacids. I don't remember the other three categories,
16 but it was very clear and obvious that the PDL had reduced
17 spending in those categories.

18 The other thing, the secondary consequence of
19 preferred drug lists is, supplemental rebates. So, this
20 is the ability of the state Medicaid Programs to go to
21 manufacturers and say, we've got this preferred drug list,
22 we'd love to include you, how much of a rebate will you
23 give us in order for us to do that? In 2006, we got about
24 \$10 million in supplemental rebates. So that's direct,
25 off of the top, savings in the state program.

1 MS. LUNGE: Can I ask you a question before you move
 2 on? So, --
 3 MR. KAPPEL: Does that follow our protocol?
 4 MS. LUNGE: Yes.
 5 MR. KAPPEL: Okay.
 6 MS. LUNGE: So, in terms of savings, is there a way
 7 to -- to sort of suss out how much is the PDL itself and
 8 how much is multi-state purchasing?
 9 MR. KAPPEL: This one, I believe, was before the
 10 multi-state.
 11 MS. LUNGE: Okay.
 12 MR. KAPPEL: I don't think that's real clear as soon
 13 as you start integrating.
 14 Couple of other states have also evaluated the
 15 preferred drug lists. Florida saved about \$81 million,
 16 much bigger program, so about 4% savings. And that was a
 17 study done by their own Office of Public Policy and
 18 Government --
 19 MS. LUNGE: Accountability.
 20 MR. KAPPEL: -- Accountability. Something like
 21 that. OPPAGA.
 22 UNIDENTIFIED ATTENDEE: Sounds like a Florida town
 23 name.
 24 MR. KAPPEL: Nowhere near as catchy as JFO.
 25 Indiana, they estimated about 12.4 million savings.

1 Interestingly, offset by a reduction in rebates of about
 2 3.5 million. So, they saw a smaller but still substantial
 3 savings. That reduction in rebates, something I don't
 4 think a lot of other states have thought about. When you
 5 move people away from the real high priced, high rebate
 6 drugs, onto drugs that are lower priced but carry a lower
 7 rebate, you give up some of those savings. So, what
 8 Indiana did was, net the effect to come up with that
 9 roughly \$9 million savings. And they did specifically
 10 look at that spillover effect, was there increases in
 11 other kinds of health services, and didn't see any at all.
 12
 13 UNIDENTIFIED ATTENDEE: Now, for both Florida and
 14 Indiana, given the size of those two states, that doesn't
 15 seem like a lot of money to me. Dangerous for a
 16 politician to say. Any amount of money is not a --
 17 doesn't look like a lot of money. But for the size of
 18 those states, that wouldn't seem to be significant.
 19 MR. KAPPEL: It sort of depends on how you define --
 20
 21 UNIDENTIFIED ATTENDEE: I mean, 12 million in
 22 Indiana.
 23 MR. KAPPEL: You're talking about one or two percent
 24 of your spending. Which is, when you look at a billion
 25 dollar program, not a whole lot of money. But when you

1 look at how tightly Medicaid tends to get managed every
 2 year, --
 3 UNIDENTIFIED ATTENDEE: You'll take it, yeah. It's
 4 just not dramatic, I guess, is what I'm saying.
 5 MR. KAPPEL: Yeah. Yeah. There's no -- Nothing I
 6 can foresee that's gonna do the 33% reduction in drug
 7 spending. I can't imagine a way of doing that. So, in
 8 effect, what you have to look for is, --
 9 UNIDENTIFIED ATTENDEE: So, looking for a percentage
 10 point here and a --
 11 MR. KAPPEL: -- a lot of percentage here, percentage
 12 there, kind of programs.
 13 UNIDENTIFIED ATTENDEE: -- and a percentage point
 14 there. And pretty soon it starts to add up.
 15 MR. KAPPEL: Yes.
 16 UNIDENTIFIED ATTENDEE: You got two percentage
 17 points then.
 18 MR. KAPPEL: Yeah. Vermont's pharmacy spending is
 19 probably around a hundred and -- was around a 150,000
 20 million before Part D. And Part D took a whole lot of
 21 that away.
 22 UNIDENTIFIED ATTENDEE: Okay.
 23 MR. KAPPEL: Evaluation of generic substitution.
 24 One of the nicer ways to look at this, we talked yesterday
 25 and it's in the handout, about the Express -- Oh, boy.

1 Oh, boy. It is Friday afternoon, isn't it? -- the
 2 Express Scripts Drug Trend Report. So, this is an annual
 3 report that that particular PDM does on its own book of
 4 business. But they -- What they report is, a pretty
 5 substantial downward pressure on growth directly as the
 6 result of switching from brand to generic. And that
 7 effect grew from about 1.4% of trend to about 2.7 over the
 8 last five years. So, a definite reduction in growth, and
 9 that reduction itself is growing. So, I think that's
 10 pretty good news.
 11 Counter detailing in Vermont.
 12 MS. LUNGE: So, as we've discussed in -- in both of
 13 the committees, as you know there is language in our
 14 current statute which requires OVA to do an evidence-based
 15 counter detailing program that I don't believe has been
 16 implemented at this point. We have requested the 2005
 17 report. And I think it may be in my
 18 E-mail this afternoon, so I can get that for you next
 19 week. And that report was requested from OVA to describe
 20 how they would proceed with that program.
 21 There's also a question, -- And I apologize. I
 22 can't remember who asked it.
 23 -- as to whether or not OVA had included in their budget
 24 request, money to implement this program. And I did talk
 25 with Stephanie and Maria at the Joint Fiscal Office. And,

Page 22

1 basically, our -- our budgeting processes, in order for us
2 to really determine that, we'd have to physically go back
3 through the files. So, we haven't determined that yet.
4 But they're -- OVA's gonna be here next week, so that's
5 certainly something that you can ask them as well.

6 UNIDENTIFIED ATTENDEE: So, why hasn't this moved
7 along more quickly? Was it not required, or, they just
8 not getting to it? What's the story?

9 MS. LUNGE: It was required. It was a shall in the
10 statute.

11 But I think you really should ask OVA about that.
12 My understanding is, because there was no money budgeted
13 for it. But -- Which I think is why someone asked, well,
14 did they ask for it? And I don't know. So, I think
15 that's something you should discuss with them?

16 UNIDENTIFIED ATTENDEE: Is the AHEC and the OVA
17 effort connected? Because after I asked the question in
18 our committee, --

19 MS. LUNGE: Yes.

20 UNIDENTIFIED ATTENDEE: -- Blair pulled me to the
21 side and referred me to a report, which I still haven't
22 had time to read. But --

23 MS. LUNGE: I -- I did look up some information
24 about AHEC and what they're doing on counter detailing.
25 And I do have a handout for you on that.

Page 24

1 an education program directly to providers, a credible
2 program by professionals, in the hopes of changing their
3 prescribing patterns.

4 So that was the goals of the evaluation. Do
5 behaviors change, do the way docs write scripts change?
6 And, interestingly, they specifically asked, can the
7 changes be attributed to the program? They used a
8 provider survey, asked a lot of questions about how the
9 providers value the program; do they find it helpful, is
10 it informative, is it credible? But they didn't really
11 determine anything about specific outcomes. They didn't
12 report anything about behaviors changing or money being
13 saved.

14 Marketing --

15 UNIDENTIFIED ATTENDEE: They didn't find any
16 evidence? Does that mean it doesn't exist?

17 Or, --

18 MR. KAPPEL: They weren't able, based on their
19 survey, to identify it. I think the --

20 UNIDENTIFIED ATTENDEE: Okay.

21 MR. KAPPEL: -- survey was a good try, but it
22 definitely didn't get them where they wanted to go.

23 UNIDENTIFIED ATTENDEE: But did they come to the
24 conclusion that it's not saving any money?

25 MR. KAPPEL: No.

Page 23

1 Would you like to hand that out for me?
2 (Whereupon, copies of handouts were distributed,
3 after which the following was had:)

4 MS. LUNGE: And it -- From what the information that
5 I've been able to get so far, it doesn't look like they're
6 necessarily connected. The statute did not make any
7 connection.

8 But AHEC, which is the Area Health Education
9 Centers, which is affiliated with UVM, does provide a
10 one-hour case based interactive session at a doctor's
11 practice. And they have a team of a clinical pharmacist
12 and a physician providing the evidence based information
13 to doctors. And in 2006, they have three areas that they
14 are providing education on, management of hypertension,
15 cholesterol and heartburn.

16 So, we do have a small counter detailing program
17 operating in Vermont through that operation. And I think
18 it's -- I'm still trying to track down exactly if that has
19 any connection with what we had asked for, a statute, or
20 if it's completely separate and AHEC just decided it would
21 be a good opportunity for them.

22 MR. KAPPEL: One of the most comprehensive
23 evaluations of counter detailing was done in Pennsylvania.
24 Pennsylvania has a program called Independent Drug
25 Information Service. And it's designed specifically to do

Page 25

1 UNIDENTIFIED ATTENDEE: Or, are they just saying
2 they couldn't figure it out?

3 MR. KAPPEL: They couldn't conclude either way.

4 UNIDENTIFIED ATTENDEE: Either way. Okay.

5 MR. KAPPEL: But what they did conclude was, the
6 doctors found the program helpful and useful.

7 UNIDENTIFIED ATTENDEE: Okay.

8 MR. KAPPEL: So that was enough for them to keep
9 going.

10 UNIDENTIFIED ATTENDEE: Did they save any money?

11 UNIDENTIFIED ATTENDEE: Clearly, it blows my --

12 MS. LUNGE: We don't know.

13 UNIDENTIFIED ATTENDEE: -- prescribing habits.

14 Thank you.

15 UNIDENTIFIED ATTENDEE: But this was desperately
16 needed.

17 MS. LUNGE: I can call Pennsylvania and see if we
18 can get more information on that. But at least the
19 materials that we were able to find, that were publicly
20 available, didn't really address the -- the cost savings
21 issue. It just addressed more physician participation and
22 satisfaction with the program.

23 UNIDENTIFIED ATTENDEE: Made everyone feel good.

24 MR. KAPPEL: Marketing disclosures. This has
25 actually gotten a lot of attention in the Medical

Page 26

1 Journals. Journal of the American Medical Association,
2 New England Journal of Medicine, have both written on
3 this. JAMA specifically cited the Vermont program as a
4 good start. But JAMA pointed out there really, again, is
5 no concrete evidence that these have an affect.

6 So, there's a report filed with the Attorney
7 General's Office. The most recent was June 2006. It's
8 very informative, which companies are spending how much
9 money kinds of things. But once more, you've got
10 information, but you haven't got a real good evaluation
11 tool.

12 340B providers.

13 MS. LUNGE: So, --

14 UNIDENTIFIED ATTENDEE: For Finance, tell us what
15 340B is.

16 MS. LUNGE: 340B. I can do better than tell you. I
17 have a chart.

18 There are two terms that we use in this area, FQHC
19 and FQHC look-alikes.

20 UNIDENTIFIED ATTENDEE: Those we know.

21 MS. LUNGE: And those particular entities are able
22 to get what's called 340B pricing.

23 340B refers to some section of federal law. But,
24 basically, you can see from this very colorful chart,
25 which Steve will go through in more detail, where 340B

Page 28

1 through this in detail. But it gives you a very nice
2 snapshot of all the different benefits that the health
3 center gets with this designation and the differences
4 between the two types of entities.

5 So, the other handout that I wanted to --

6 UNIDENTIFIED ATTENDEE: Excuse me.

7 MS. LUNGE: Yes.

8 UNIDENTIFIED ATTENDEE: How do -- How does Section
9 340B result in lower --

10 MS. LUNGE: Drug prices.

11 UNIDENTIFIED ATTENDEE: -- lower drug prices?

12 MS. LUNGE: It's set by federal law. So, federal
13 law, in Section 340B, is the section of the federal law
14 which discusses the pharmacy pricing for this particular
15 program. So, it gets the cheaper, I believe it gets the
16 cheaper prices, because the federal government has set it
17 at a particular level.

18 UNIDENTIFIED ATTENDEE: So, they've set what they --
19 what they will pay to the pharmaceutical companies.

20 MS. LUNGE: I believe so. I -- I can double-check
21 and do more research on exactly how that works.

22 UNIDENTIFIED ATTENDEE: Why didn't they do that with
23 Part D?

24 MS. LUNGE: Hold on. Let me channel to Congress. I
25 don't know.

Page 27

1 pricing compares to other pricing.

2 So, 340B is the red, small but low line, on the back
3 page of your handout, your PowerPoint. Which is what --
4 And because it is one of the lowest costs available, that
5 is one reason why there -- many states have focused on
6 trying to increase the number of federally qualified
7 health plan look-alikes that are able to obtain this
8 pricing for their patients.

9 So, the handout that Steve just passed around is a
10 list on one side. The first two boxes are the FQHC's and
11 the FQHC look-alikes in Vermont. We have five FQHC's,
12 each with multiple sites.

13 It's on the back of this.

14 UNIDENTIFIED ATTENDEE: Do you have more of them?

15 MS. LUNGE: Were there not enough? I'm sorry.

16 MR. KAPPEL: Oh, there's plenty.

17 MS. LUNGE: Sorry. So, -- So, you can see from this
18 list exactly where each of the five FQHC's are and where
19 their additional sites are. And it gives you everything,
20 including their address and phone number. And then it
21 also shows you our two look-alikes, one of which in
22 Lamoille County has five sites in total.

23 So, on the front of that page, it compares the
24 differences between FQHC's and FQHC look-alikes, which was
25 a question yesterday from Senate Finance. And I won't go

Page 29

1 UNIDENTIFIED ATTENDEE: That was a huge debate.
2 That was more of a rhetorical question.

3 But what I'm hearing is, when they choose to for
4 limited populations, and whether it's -- whether it's the
5 FQHC's or the Veteran's Administration, they'll negotiate
6 like on other areas they're reluctant, for broader
7 populations, --

8 MS. LUNGE: Right.

9 UNIDENTIFIED ATTENDEE: -- they have been reluctant
10 to do that for whatever the reason might be.

11 MS. LUNGE: Right.

12 UNIDENTIFIED ATTENDEE: But they have been willing
13 to do it in certain -- for certain distinct populations.

14 MR. KAPPEL: Well, it's actually a combination of
15 setting a statutory cap and then even negotiating below
16 that, which is how the VA gets the best prices around.

17 MS. LUNGE: So, while I don't -- I wasn't able to at
18 this point find Vermont's specific data. Which doesn't
19 mean it's not there. I just wasn't able to spend enough
20 time looking for it to track it down, if it exists. I was
21 able to find a NCSL brief from last January, which talks
22 about community health centers in general. It doesn't
23 have specific finding on drugs. But it did find -- It did
24 review studies on this type of health center, and found
25 that money invested in health center reduces Medicaid

Page 30

1 expenditures and national healthcare spending. And then
2 there's some specifics about that on the -- on the second
3 page. So that gives you a little more information about
4 this type of entity and -- and some of the studies that
5 have been done on that area.

6 Next, I also said I would follow-up on our I Save Rx
7 Program. This is our program that we joined that is run
8 prescription drugs through Canada, Europe, and Australia,
9 and New Zealand. And I was able to get our cumulative
10 numbers through December 2005, which are 242 enrollees and
11 752 orders that have been placed through that web-based
12 service.

13 Now, on their website, I Save Rx estimates savings
14 of 25 to 80% from U.S. retail prices, depending on the
15 medication. I don't know the specifics for our 752
16 orders, 'cause I wasn't able to obtain that information.

17 But there are additional reports on the I Save Rx
18 website, including a report on potential savings to the
19 Illinois Retiree Program, if they used the program for
20 those folks. And also reports on the safety and ethicacy
21 kind of questions that come up often when people are
22 discussing reimportation. And so they have one on Canada,
23 one on Europe, and one on Australia/New Zealand. So
24 that's a little more information about I Save Rx than we
25 had the last time we talked.

Page 32

1 the pharmacy, you know. And that's -- that's the reality.

2 UNIDENTIFIED ATTENDEE: Rather than going home and
3 going to a website.

4 UNIDENTIFIED ATTENDEE: Yes.

5 MS. LUNGE: It's --

6 UNIDENTIFIED ATTENDEE: There was some outreach.
7 But, you know, you almost have to question whether we even
8 get our moneys worth on that. So, --

9 MS. LUNGE: It's also, I would mention, because it
10 is a mail order service, it's
11 mostly -- it's -- I think it's only --

12 UNIDENTIFIED ATTENDEE: Maintenance.

13 MS. LUNGE: -- maintenance medication that people
14 use it for.

15 So, if you, you know, need penicillin or, you know,
16 some sort of antibiotic, you wouldn't use this for that.

17 UNIDENTIFIED ATTENDEE: Okay. It's limited too.

18 UNIDENTIFIED ATTENDEE: Yes. And they don't do any
19 -- Yeah.

20 MS. LUNGE: And there's certain categories of drugs,

21 --

22 UNIDENTIFIED ATTENDEE: Drugs.

23 MS. LUNGE: -- which they don't provide because of
24 either FDA restrictions or concerns about that.
25

Page 31

1 UNIDENTIFIED ATTENDEE: When will we get information
2 through the end of '06? This looks like a very small --
3 small program at the moment.

4 MS. LUNGE: Let me just double-check. I didn't --

5 UNIDENTIFIED ATTENDEE: We predicted that.

6 MS. LUNGE: I'm sorry. That's '06.

7 UNIDENTIFIED ATTENDEE: We predicted that.

8 MS. LUNGE: I made a typo there. It should be '06.

9 UNIDENTIFIED ATTENDEE: That should be '06.

10 MS. LUNGE: Yes. I apologize for that. Thank you.

11 UNIDENTIFIED ATTENDEE: Yeah. We had started it at
12 the '05 session.

13 UNIDENTIFIED ATTENDEE: Oh, okay.

14 MS. LUNGE: Right. We passed it in '05, so I think.

15 UNIDENTIFIED ATTENDEE: So what -- Ken, why did you
16 predict that it wouldn't be -- it wouldn't be a larger
17 program?

18 UNIDENTIFIED ATTENDEE: Because it's not easy. It's
19 not easy. People -- To make something easy for people to
20 get cheap drugs, it has to be not something that they do
21 out of the ordinary. You know, when people are used to
22 going to the doctor, getting the prescription, going to
23

Page 33

1 UNIDENTIFIED ATTENDEE: You can't get Oxycodon that
2 way.

3 MS. LUNGE: Right.

4 UNIDENTIFIED ATTENDEE: Thank you.

5 MR. KAPPEL: Okay. Lastly, the triple, colorful
6 graph, which despite it's garish colors, is not something
7 I did.

8 This graph was done by a guy named Bill VanOssen
9 (Phonetic), who is probably one of the smartest guys
10 nationally on prescription drug pricing. He's done a lot
11 of presentations for NCSL and knows this stuff better than
12 almost anybody.

13 So, this graph has a couple different things. The
14 heights of the bars are the relative prices that each
15 different pricing system pays. So, what you can see is,
16 preferred PBM's and other private insurance typically pay
17 about 80% of retail; Medicaid, about 60%; FFS is the
18 Federal Supply Schedule, about 51.7. And then the 340B's
19 and the VA negotiate down from there.

20 The width of the bars gives you his estimate of the
21 market share that each one of those entities has. So,
22 what you can see is, about 25% of customers pay cash; the
23 lion's share, about 60%, gets that discount. And the guys
24 who get the really big discounts are not necessarily big
25 market share organizations. But despite that, they're

1 able to negotiate pretty substantial discounts.

2 UNIDENTIFIED ATTENDEE: Steve, the argument, 'cause
3 we keep hearing the argument, that if we do anything to
4 PBM's it'll cost money. Is the argument that the
5 manufacturers can afford to give these small groups big
6 discounts because the big groups are paying more? And so,
7 if we equalized it, the argument might be that we'd bring
8 everybody maybe to the yellow line or slightly above, but
9 the Veterans and everybody else would come up. Is that --
10 If we went national.

11 MR. KAPPEL: Wow. That's a tough one to answer.

12 UNIDENTIFIED ATTENDEE: The leveling effect.

13 MR. KAPPEL: Clearly, you wouldn't get everybody
14 down to the VA.

15 UNIDENTIFIED ATTENDEE: Down to the purple.

16 MR. KAPPEL: I think part of the question is, where
17 that line winds up in part is how you implement that line,
18 and in part, what your expectations are of the
19 manufacturers. Because I think you can sort of average
20 this out if you assume they're going to keep their current
21 levels of profit and current levels of investment, things
22 like that.

23 UNIDENTIFIED ATTENDEE: And marketing.

24 MR. KAPPEL: If you start pushing it down below
25 what's the weighted average of these, then you're gonna

1 countries.

2 UNIDENTIFIED ATTENDEE: Okay.

3 MR. KAPPEL: There's even some counter-argument,
4 because the U.S. pays lower prices for generics than a lot
5 of foreign countries, whether you offset your savings in
6 brand with having to pay increase generics or whether you
7 just say, we'll buy brands there and generics here. I
8 think it's -- it's clear that prices are lower
9 internationally, but exactly how much gets much more
10 subtle.

11 UNIDENTIFIED ATTENDEE: But I know you can't buy
12 Pepcid Complete in Canada.

13 UNIDENTIFIED ATTENDEE: You can't?

14 UNIDENTIFIED ATTENDEE: Can't.

15 MR. KAPPEL: And that -- that's our presentation.
16 We'd be happy to take questions.

17 Okay. Either we were perfectly clear or it's Friday
18 afternoon.

19 UNIDENTIFIED ATTENDEE: You were perfectly clear.

20 MR. KAPPEL: And it's Friday afternoon.

21 UNIDENTIFIED ATTENDEE: I think you've run us
22 through this basic thing a couple times, so we're starting
23 to grasp it.

24 UNIDENTIFIED ATTENDEE: What were the other two of
the next step above -- two steps above VA for?

25 UNIDENTIFIED ATTENDEE: To the right.

1 start eroding either their profits or their investment, or
2 some combination of the two.

3 UNIDENTIFIED ATTENDEE: Do we have any indication
4 where foreign sales are at, where their pricing is at?
5 Canada, England.

6 MR. KAPPEL: Well, I think Robin's I Save Rx numbers
7 were saving 30 to 80%.

8 MS. LUNGE: Depending on the drug.

9 UNIDENTIFIED ATTENDEE: On the drug.

10 MS. LUNGE: So, it -- it -- it -- I think there's a
11 lot of variation, depending on --

12 UNIDENTIFIED ATTENDEE: Oh, yes.

13 MS. LUNGE: -- what drug you're talking about.

14 UNIDENTIFIED ATTENDEE: Where it's manufactured.

15 MR. KAPPEL: The international comparisons, lots and
16 lots of folks have gotten their PhD's doing that kind of
17 analysis. And it's --

18 MS. LUNGE: And they're not sitting here today.

19 MR. KAPPEL: And they're not sitting here, neither
20 one of them.

21 But I think it's another one of those places where
22 evaluation gets a little tricky, because the discount you
23 report depends on what basket of drugs you buy. There's
24 not kind of this standard market basket of drugs that
25 everyone uses to compare different pricing in different

1 black and white.

2 MR. KAPPEL: Yes. FSS is Federal Supply Schedule
3 and 340B is what we just talked about.

4 UNIDENTIFIED ATTENDEE: Okay.

5 MR. KAPPEL: Okay.

6 MS. LUNGE: Thank you.

7 UNIDENTIFIED ATTENDEE: Thank you.

8 (Whereupon, the foregoing proceedings were
9 terminated.)

Page 2

PROCEEDINGS

CD 21/TRACK 1

ATTENDEE 1: This is a meeting of the Senate Health and Welfare Committee and the Senate Finance Committee joined here in room 11. Today is Wednesday, January 31st, 2007.
(Conclusion of CD 21/TRACK 1.)

Page 4

I thought I would begin and give a brief overview regarding prescription drugs and the programs and initiatives that we are involved with at the agency, and then I would ask the Acting Commissioner of Health, Ms. Sharon Moffatt, to speak to the programs in her area, and Joshua Slen, who's the director of OVHA, to speak to the programs that he manages.

With that said, it's, you know, no surprise to anyone that prescription drugs are a major, major health issue nationally. There's certainly an issue with Vermont and I don't think there's anyone that's not concerned about the direction that things are headed. Certainly medical professionals are, the pharmacists are, consumers and insurers are all very, very concerned. I think the pharmacists clearly are concerned about the cost of doing business and I think they're also very concerned about the impact of recent reimbursement protocols from private payers as well as insurers.

There's also no doubt in my mind that everyone has the same goal in mind and I think that we are trying to provide clinically appropriate coverage and access to clinically

Page 3

PROCEEDINGS

CD 21/TRACK 2

ATTENDEE 1: Okay. We're going to start off. This is our joint meeting on -- today's topic is impact and evaluation of Vermont's initiative and we've got (inaudible) administration come in to talk to us about what we have done and what their impact has been and we're going to start with Secretary Cynthia LaWare.

MS. LAWARE: Good afternoon. It's nice to be here. What I thought I would do today -- for the record, Cindy LaWare, Secretary of the Agency of Human Services. Get back into the swing of things. What I'd thought I'd do this afternoon is just take a very brief moment and review the prescription drug issues that are involved -- that we're involved with at our agency.

ATTENDEE 2: Excuse me, could you put the microphone up a little more.

(Static.)

MS. LAWARE: Let's try this again. Why don't I start over. For the record, Cindy LaWare, Secretary of the Agency of Human Services. It really is a pleasure to be here and

Page 5

appropriate medications at the most effective cost, and that -- that's a challenge.

Now, as I mentioned, I'll discuss the I-SaveRX program and we could start right there. I think as you all recall, the I-SaveRX program began by legislation in the 2005/2006 season.

In essence, it is a program that would -- it was designed and developed by the State of Illinois and it's a program that would allow residents to purchase less costly brand drugs from outside the country. And they worked closely with Canada, Ireland, as well as the United Kingdom, and there may be a few other countries that -- I know they were looking into Australia and a few other countries as well.

Now, it was in the spring of 2005 that we signed an MOU with Illinois to participate specifically in the program. And then we began to work -- we, the Agency of Human Services -- to work diligently with a variety of our partners, those including AARP, the Vermont Coalition for Disability Rights, area agencies on aging, to create a communication plan so we could get the information about this program out to Vermonters so that they could make some informed decisions

Page 6

1 about whether they wanted to participate or not.

2 And the communication plan that we
3 established, we certainly developed a Web site
4 first and foremost, we -- in consultation with
5 Illinois and our community partners, we created
6 various pieces of descriptive material, fliers
7 and the like. The Department of Health
8 distributed the information through all their
9 district offices. Our Department for
10 Disabilities Aging and Independent Living,
11 working through their network distributed the
12 information to the area agencies on aging, adult
13 daycare centers, anywhere that we thought that
14 folks would have an interest in having access to
15 this particular program. We worked closely with
16 the Vermont healthcare ombudsmen and their
17 hotline had information about the program and
18 directed them to where they could get either a
19 hard copy and/or the Web information. AARP,
20 Vermont legal aid offices. So we really did --
21 the Bi-State Primary Care Association. So we
22 covered the waterfront in that regard.

23 Currently, Acting Commissioner Sharon
24 Moffatt is a member on the joint work group which
25 is, I would say, in some respects, a governing

Page 7

1 body for I-SaveRX. There is a representative
2 from each state that participates and they review
3 the program, how it's working, and they also
4 review any additions or deletions to the
5 prescription drug list. So Sharon is
6 participating in that on a regular basis.

7 We also receive monthly reports from
8 I-SaveRX so that we have an understanding of the
9 actual impact that this program has had on the
10 residents of Vermont. And the most recent report
11 that we've received is as of December 31st of
12 '06. And that indicated to us that there were
13 242 enrollies, Vermont enrollies, and those
14 enrollies had placed 752 specific orders for
15 drugs. So it has been up and running for a
16 little while and you can see the participation
17 level.

18 ATTENDEE 3: When -- excuse me. When did
19 you say this started?

20 MS. LAWARE: In '0- -- the spring of '05.

21 ATTENDEE 3: So in two years you have 242
22 enrollies signing up?

23 MS. LAWARE: Yes.

24 ATTENDEE 3: How would you characterize that,
25 successful, unsuccessful --

Page 8

1 MS. LAWARE: Weak.

2 ATTENDEE 3: -- too soon to -- weak?

3 MS. LAWARE: Weak. Very weak.

4 ATTENDEE 3: Thank you.

5 MS. LAWARE: And I think that there was a lot
6 of discussion in controversy around the program
7 relative to reimportation of drugs.

8 ATTENDEE 4: (Inaudible) comments
9 (inaudible).

10 ATTENDEE 5: Yeah.

11 ATTENDEE 4: Can I just ask what -- I -- you
12 referred to a document. Is there a document
13 that's been passed out? Because we haven't seen
14 it down here. You stated as you can see, and I
15 didn't know if there was something you handed
16 out.

17 MS. LAWARE: No.

18 ATTENDEE 4: Okay.

19 MS. LAWARE: Sorry. You can see just from the
20 figures.

21 ATTENDEE 4: Okay.

22 MS. LAWARE: I apologize.

23 ATTENDEE 4: Figures.

24 MS. LAWARE: I think there certainly was
25 some concern. There was a tremendous amount of

Page 9

1 debate when we were discussing the program during
2 that session as to the legality of the program.
3 I think there were additional issues relative to
4 how quickly the drugs might be able to cross the
5 border. And, you know, all of my sense is that
6 it's those kinds of questions and concerns that
7 may have impacted our -- the choices that our
8 residents made as to whether to participate in
9 the program.

10 And I think the other thing that's very
11 important to understand is this is really for
12 brand drugs only. You can purchase generic drugs
13 in the United States for much less money than you
14 could even go to Canada and purchase a brand drug
15 for. And I think there's no doubt that everyone,
16 consumers as well as physicians, are much more in
17 tune with the cost of prescription drugs, and I
18 believe that the generic script writing is
19 increasing every day. And that could be another
20 reason why the participation might be lower.

21 ATTENDEE 5: You might have said this and I
22 missed it. When you said that you thought it was
23 weak, do you -- do we have a sense of how many
24 people in Vermont would -- because people with
25 coverage -- with prescription coverage can't

Page 10

1 access this, right, it's only for people without
2 prescription coverage?

3 MS. LAWARE: No, no. People with coverage
4 can access it.

5 ATTENDEE 5: Oh, they can?

6 MS. LAWARE: And then they submit a claim
7 through their insurance company.

8 ATTENDEE 5: Okay. (Inaudible.)

9 MS. LAWARE: It would depend on the
10 coverage --

11 ATTENDEE 5: Right.

12 MS. LAWARE: -- because in recalling some of
13 the testimony as, you know, I recall talking
14 about, let's say, the state employee plan --

15 ATTENDEE 5: Uh-huh.

16 MS. LAWARE: -- the prescription drug
17 benefit under the state employee plan at that
18 time was so generous that very quickly it
19 wouldn't make any sense for a state employee to
20 use this program because they would have received
21 100 percent coverage for any drug that they
22 needed. So it also depends on the coverage that
23 someone has.

24 ATTENDEE 5: (Inaudible) 242?

25 MS. LAWARE: If it helps one person.

Page 12

1 things aren't working then we would want
2 something else. If there's a reason this one's
3 not working, then -- if it can be fixed, I think
4 we'd want to know that too so we can fix it.

5 But just getting a sense of the cost with
6 your 722, I would like to continue, but the
7 questions are going to be what's wrong with it
8 and can it be made right.

9 MS. LAWARE: Other -- other questions
10 regarding I-Save?

11 ATTENDEE 7: Well, actually to follow up to
12 what Doug just asked, Senator Racine has asked,
13 in the budget adjustment, does AHS got anything
14 in there for -- anything at all in the Budget
15 Adjustment Act? I assume you must.

16 MS. LAWARE: Anything at all in the Budget
17 Adjustment Act?

18 ATTENDEE 7: Under Agency of Human Services.

19 MS. LAWARE: We are not asking for any
20 general fu- -- any additional general fund money,
21 but there is a variety of adjustments that we
22 need to make --

23 ATTENDEE 7: Okay. Are there any that are
24 targeted to replace ones that were used on this
25 program setting it up?

Page 11

1 SENATOR RACINE: How much did it cost to set
2 this up?

3 ATTENDEE 6: How much did it cost to what?

4 SENATOR RACINE: Set this program up. I'm
5 just wondering on a cost per person (inaudible)
6 what it's cost the State to provide this benefit.

7 MS. LAWARE: There were no additional funds
8 appropriated to set this program up. It was the
9 cost of developing the Web site, developing --

10 SENATOR RACINE: Somebody did that.

11 MS. LAWARE: -- the marketing materials.
12 It was absorbed in our department and I don't
13 have an absolute cost associated with it.

14 SENATOR RACINE: Okay. So we don't know how
15 many -- one person spent a week setting it up or
16 six months setting it up, we don't know how much
17 those materials cost us?

18 MS. LAWARE: I don't have that number today.

19 SENATOR RACINE: I'm just wonder- -- I'm
20 just trying to get a sense. I'm not trying to
21 put you on the spot.

22 MS. LAWARE: No, I understand.

23 SENATOR RACINE: Just trying to get a sense of
24 where -- one of the things we're trying to do
25 here is see what's working and what's not, and if

Page 13

1 MS. LAWARE: No.

2 ATTENDEE 7: Okay.

3 MS. LAWARE: Thank you very much.

4 ATTENDEE 7: Are you done?

5 MS. LAWARE: Yes.

6 ATTENDEE 8: Oh, (inaudible) ask my question,
7 then. What are you -- how are you responding to
8 what you characterize as weak participation? Are
9 we going to redouble our efforts, are you going
10 to back off, are you going to recommend to the
11 legislature that this one just be forgotten?

12 Where do we go from here or do we accept this and
13 look at other things? I don't know where to go.

14 MS. LAWARE: Well, we still believe that the
15 program is not legal.

16 ATTENDEE 8: Oh, okay.

17 (Static.)

18 ATTENDEE 8: I might agree with them, but I
19 doubt it. But given that, does that mean there's
20 no -- there- -- there's no continuing effort to
21 make this work? I just -- I don't know what that
22 means.

23 ATTENDEE 6: Did you say not legal?

24 MS. LAWARE: Yeah.

25 ATTENDEE 8: Yeah, that's what she said.

Page 14

1 (Inaudible.)

2 MS. LAWARE: Well, I haven't been arrested
3 yet and, you know, the authorities are -- there's
4 considerable debate as to whether sponsoring
5 organizations were going to run into any
6 particular issues if they were sponsoring
7 programs of this nature. There was -- I think
8 maybe Springfield, Massachusetts, was one of the
9 first cities that sponsored a reimportation
10 program. I know Burlington has done so.

11 It is my understanding that none of the
12 programs had taken off and we're the be all and
13 end all panacea to the escalating cost of
14 prescription drugs that folks thought they were
15 going to be. And, again, I think it is because
16 generics are much less expensive.

17 ATTENDEE 9: So assuming you still think
18 it's illegal, that would be the Administration's
19 position?

20 MS. LAWARE: Yes.

21 ATTENDEE 9: And I wasn't here, so I'm not
22 aware of the history, but I assume that means the
23 governor did not sign this into law, is that
24 correct, or did he sign it?

25 ATTENDEE 10: Yeah.

Page 16

1 would be closer to that.

2 ATTENDEE 6: Okay.

3 ATTENDEE 12: Now, so the issue of legality
4 obviously goes beyond the state. It's not
5 something that would be under consideration in
6 this state, but it's a federal issue. But one of
7 the concerns that's raised consistently about
8 reimportation is the quality of the drug for
9 treatment. And are there any indications that
10 the drugs that have been received in this program
11 through reimportation are any less medically
12 effective than those that are purchased in the
13 United States?

14 MS. LAWARE: I have not been made aware of
15 that. You know, I think there are also issues
16 associated with drugs that need to be temperature
17 controlled and I think that -- when we started
18 out you have the whole gamut of drugs and then if
19 you begin to chop off all the generics -- and
20 then again, nothing that is a narcotic can go
21 across a border and then temperature-controlled
22 drugs cannot go across a border. Then you really
23 do get down to a much smaller group of
24 pharmaceuticals that could potentially be
25 involved in this program.

Page 15

1 ATTENDEE 11: Yes, he did.

2 MS. LAWARE: I believe he signed it.

3 ATTENDEE 9: He did sign it even though he
4 thinks it's illegal. Okay.

5 Now, my question still remains, because of
6 your position that it's illegal, does that mean
7 you aren't committed to trying to expand it or
8 are you trying to expand it and expand
9 participation or is it just on life support now?

10 MS. LAWARE: We are not aggressively selling
11 the I-SaveRX program.

12 ATTENDEE 9: Okay.

13 MS. LAWARE: We are providing information
14 through the networks that I have mentioned before
15 so that if people do have an interest in the
16 program we can be responsive to give them as much
17 information as possible.

18 ATTENDEE 9: Okay.

19 ATTENDEE 6: And what -- if I'm remembering
20 it correctly, that some 40 percent of healthcare
21 dollars are spent with prescript- -- prescription
22 (inaudible) -- no -- yeah, sensory
23 pharmaceuticals, drugs.

MS. LAWARE: I don't have that percentage
off the top of my head. Maybe Sharon or Joshua

Page 17

1 But I've not heard of anything. And in
2 cases where shipments have been delayed, then
3 I-SaveRX and the distributors out of Canada or
4 the other countries I know have been replacing
5 the orders if there's any question.

6 ATTENDEE 13: What -- you said Illinois
7 started this. What other states did you say are
8 participating in this?

9 MS. LAWARE: There's Illinois, Wisconsin,
10 Kansas, Missouri, and Vermont.

11 ATTENDEE 13: And do you have any
12 information on participation rates in those
13 states? I see somebody nodding (inaudible).

14 MS. LAWARE: I don't have any here, but we
15 have access to that information.

16 ATTENDEE 13: And do you have any -- do you
17 know enough about the numbers to know -- to make
18 any judgment on whether their enrollments have
19 been stronger than ours based on a per capita
20 basis, I guess?

21 MS. LAWARE: I'll say it's my recollection,
22 the last time that I looked at all of the
23 numbers, that they were disappointing as well --

24 ATTENDEE 13: In all states.

25 MS. LAWARE: -- but whether they were as

1 disappointing in other states, we can get that
2 information.

3 ATTENDEE 13: Okay. Maybe we could find the
4 state that's the least disappointing and find out
5 what they are doing to market this program so if
6 this legislature wants to do something more
7 aggressive with this program, and we could
8 provide construction to the administration on
9 other things, that could be done.

10 MS. LAWARE: I'd be very happy to get that
11 information.

12 ATTENDEE 13: Thank you.

13 ATTENDEE 14: My question is along the same
14 line, but what did you do -- you said you're not
15 doing anything aggressively to market this now
16 and so what you did before was aggressively
17 marketing would you say? Before you made -- were
18 notified through the channel that you had at your
19 disposal.

20 MS. LAWARE: Well, I -- certainly I believe
21 that we are trying to get information proactively
22 into the hands of those that we believe would be
23 most able to take advantage of the program. So
24 to that extent, yes. We clearly didn't go
25 knocking door to door nor did we put ads in

1 papers and whatnot.

2 ATTENDEE 14: Right. Nor on public service
3 announce- (inaudible) --

4 MS. LAWARE: Right.

5 ATTENDEE 14: -- TV or nothing in the paper,
6 it was just through the clients that you -- the
7 channel you usually go through?

8 MS. LAWARE: Yes.

9 ATTENDEE 14: Health Department.

10 MS. LAWARE: Area agency on aging, senior
11 daycare centers.

12 ATTENDEE 14: Right. Thank you.

13 ATTENDEE 15: Do you think the Medicare Part D
14 had any impact, though?

15 MS. LAWARE: I think Medicaid -- Medicare
16 Part D impacted a whole host of things, but --

17 ATTENDEE 15: Well, we indicated --

18 MS. LAWARE: -- clearly if --

19 ATTENDEE 15: -- this Part D wasn't in effect.

20 MS. LAWARE: We could clearly go back and look
21 at the numbers and see if there was any major
22 shift in the numbers as we brought that program
23 on-line.

24 ATTENDEE 16: Thank you.

25 MS. LAWARE: Thank you very much.

1 ATTENDEE 17: Thank you.

2 ATTENDEE 18: I've got people in order, but
3 do you want to do a deliberate order (inaudible)
4 Sharon Moffatt in that order. Do you guys have a
5 different --

6 MS. MOFFATT: I guess it doesn't matter. We
7 don't have a strong feeling that maybe I can
8 follow up on --

9 ATTENDEE 18: Okay.

10 MS. MOFFATT: -- what this --

11 Hello. Sharon Moffatt, Acting Commissioner
12 of Health. Actually what I hope to do is touch
13 on a couple of different things a little bit more
14 on the program that Secretary LaWare was speaking
15 to. I also want to bring your attention to a
16 study you asked us to do last year in terms of a
17 drug repository and what the benefits of that
18 might be. I'm also prepared to talk to you about
19 how we actually fund our immunizations in the
20 state because I think there's some opportu- --
21 more opportunities, but I also want to have you
22 understand what's also coming at us from another
23 expense. So those are the things that I could
24 particularly be able to speak to you today about.

25 The program that Cindy was -- Secretary

1 LaWare was just speaking to, I say -- in
2 September 19th of 2006, the Illinois state
3 auditor actually released a rather scathing --
4 and rather is my word -- scathing report on the
5 state's administration of I-SaveRX. And in
6 particular what they felt was that the program
7 was illegal, so that's also another point if we
8 -- if you would like us to get that further
9 documentation of the audit done by the Illinois
10 state auditor.

11 In addition, their other comment was it was
12 also very, very low enrollment. I think for the
13 whole community of Illinois or whole state of
14 Illinois it was in the low 3,000s, so certainly
15 under 5,000. So again, for the administrative
16 cost and then the enrollment they actually felt,
17 you know, it was -- they really questioned it.

18 Also -- and again, we can get you this
19 further documentation if you'd like, but in
20 November of this last year the Rutlin Harrell
21 (phonetic) actually did a limited survey and
22 actually based on their survey results they
23 indicated that I-SaveRX actually charges two and
24 a half times what it would cost to pick up the
25 same generic drug at Wal-Mart.

1 So as you can see there's certain areas that
2 we need to keep on our radar screen and I'll get
3 that further documentation to you in that regard.

4 ATTENDEE 19: How about your local
5 pharmacist?

6 MS. MOFFATT: We could also --

7 ATTENDEE 19: Are we talking Wal-Mart's \$4
8 generics?

9 MS. MOFFATT: Right. That's what their --
10 that's what Rutlins compares -- we can get you
11 actually their report and their survey results
12 and also you have further information on that
13 particular --

14 ATTENDEE 19: You said the health department
15 took it out of the newspaper or did you
16 collaborate that and send somebody out or is this
17 just a newspaper article?

18 MS. MOFFATT: No, this was a newspaper
19 article that was brought to our attention.

20 ATTENDEE 19: (Inaudible) not anything
21 official from the State Department --

22 MS. MOFFATT: Not anything that we had done.
23 So I'm just referencing two other points of
24 information that we can get you and further
25 documentation to Secretary LaWare's statement.

1 I'd also -- will mention that AARP actually
2 in the initial outreach, they also sent out a
3 flier and did some -- and again, no cost to us as
4 an organization, but they were a partner in the
5 early outreach in terms of this, so . . .

6 ATTENDEE 6: What do you think auditor
7 (inaudible) would find -- do you think he'd find
8 things consistent with the --

9 MS. MOFFATT: Oh, I dare not guess, but he
10 may benefit significantly by looking at the state
11 auditor in Illinois' report and see if there was
12 a mutual agreement in terms of that.

13 ATTENDEE 6: (Inaudible.)

14 MS. MOFFATT: That's true, he may want to do
15 his own separate audit.

16 Shall we move on to another topic?

17 ATTENDEE 22: Yes.

18 MS. MOFFATT: Okay. I apologize. I don't
19 have copies for everyone here because I -- this
20 is a report that we did, and let me just pass
21 around what copies I do have. This is a report
22 actually requested of us last year by the
23 legislature. It was to look at drugs in medical
24 supply repository. The notion behind this, if
25 you will, and the discussion that happened in

1 ATTENDEE 20: Does this run out of your
2 department or the secretary's office?

3 MS. MOFFATT: The secretary's office -- we
4 -- what our role in the health department has
5 been is to be on these joint work groups and on
6 -- particularly what we do is myself and also
7 Dr. Cortloff (phonetic) and actually now Dr. Don
8 Swartz (phonetic), who's our medical director,
9 actually participate in these costs. Usually the
10 costs are around what the formulary is, is really
11 whether -- are there new medications,
12 prescriptions being added to the list, do people
13 agree that they should be added to the list. And
14 also that's the level that's being done and
15 that's where a lot of that committee work is
16 done. Less on the outreach aspect.

17 Yes, sir.

18 ATTENDEE 21: Yes. How much time is put
19 into all that, just upkeep?

20 MS. MOFFATT: From sitting on the phone
21 calls or whatever, it's probably an hour a month
22 at the most that, you know -- and if we were
23 looking at a more expensive person that might be
24 one of our medical physicians, so it would be the
25 time devoted to that.

1 committee asking us to actually do this study was
2 -- and again, I apologize that I didn't make
3 copies for the whole committee or whatever.
4 (Inaudible.)

5 MS. MOFFATT: I also would say that any of
6 the legislative reports are actually up on our
7 Web site if people need to get easy access to
8 them.

9 I'm not going to go through this whole
10 report, but I wanted -- I'm sorry.

11 ATTENDEE 23: I saw this (inaudible) last
12 year. Can you just give us --

13 MS. MOFFATT: Give you a grounding?

14 ATTENDEE 23: Yeah.

15 MS. MOFFATT: Okay. This came from the notion
16 of were there medications -- it came from two
17 places. Were there prescriptions that were being
18 put into landfills and actually creating a toxic
19 situation, so it came from that aspect. Or also
20 creating a situation where drugs that were not
21 used could be diverted if they were thrown away,
22 so there's that aspect. And then another aspect
23 of it was could these drugs be recycled. And I
24 mentioned drugs and pharmaceuticals in
25 particular, so this study that we were --

1 initially there was some talk to actually pilot a
2 program. And based on what we understood was
3 happening in other states, we were actually
4 cautioned not to go out and immediately do a
5 pilot because the first thing you do is a study
6 and present to you the study and then actually
7 decide where we want to go next and on your
8 advice. So that's essentially the essence of
9 where this study came from and all.

10 So -- and we were asked to look at other
11 states that may be actually tackling this. We
12 were also asked to look and coordinate across
13 other parts of state government. So our medical
14 practice board, OVHA, obviously public safety,
15 and also the Department of Aging and Independent
16 Living were key partners that were specifically
17 needed to outreach.

18 And I'm not going to go through all the
19 detail of this, but I think what's probably most
20 important for me to do is bring you to the last
21 page, page 14, which is our findings and
22 recommendations. And then I'd be happy to speak
23 to whatever point.

24 As far as the costs that we looked at, it
25 de- -- depending on the state, they had spent

1 and then it's used and put back into the --
2 particularly the state stream to help reduce
3 Medicaid funding.

4 What -- and I just want to be careful not to
5 jump to conclusions, but basically what we're
6 seeing from other states, there's probably a lot
7 of good reasons to do this from rec- -- from a
8 collection and diversion place. We would
9 probably want to go very, very cautiously if we
10 were to talk about trying to reclaim and recycle
11 these drugs. In particular, the states that have
12 recycled them is often in nursing homes where the
13 drug -- or in a hospital setting where it's been
14 under the control of a healthcare professional
15 and is able to be reclaimed in that situation,
16 not from individuals' homes or donations of that
17 sort and all.

18 But I just wanted to -- want again to make
19 the committee aware of one other study. So we're
20 real cautious going forward and we're happy to
21 talk to you further about this if you should want
22 us to consider piloting it. I think from a
23 diversionary place there's probably some real
24 wisdom here. Beyond that, I'm not sure that
25 we're going to see some significant savings in

1 from zero to set up the program to as much as
2 \$400,000 to set up the program. Most of the
3 states are voluntary in nature. So, for example,
4 in Maine, what they've done is more of a
5 collection so it's not going into the landfills
6 and it's also not getting diverted, if you will.
7 They have not gotten into the recycling of the
8 drugs.

9 Yes.

10 ATTENDEE 24: Testimony judiciary that if --
11 when you die in Florida that the police arrive
12 and confiscate your medications. What's that
13 about?

14 MS. MOFFATT: That's further supported in
15 here. Now in some states, and Florida I believe
16 is one of them, they confiscated -- or -- if you
17 will, maybe that's not right -- quite the right
18 word, but they actually take that drug so it
19 can't be diverted, but then because it hasn't
20 been used and they -- many states have actually
21 -- are recycling it. The package has to have not
22 been opened, so it can't be a partially used
23 bottle, whatever -- the blister pack can't be
24 opened and all. The pharmacy board actually will
25 then, you know, okay whether it can be recycled

1 that area.

2 ATTENDEE 6: You stated that the only drugs
3 that you can do that with, and maybe I
4 misunderstood, it sounded like even the diversion
5 and not necessarily the recycling, but the
6 diversion or just moving it from the waste stream
7 would be only those that are blister packed.

8 MS. MOFFATT: Oh, I apologize. Only the
9 blister packed or the unopened, you know, totally
10 sealed would be for recycling.

11 ATTENDEE 6: Okay.

12 MS. MOFFATT: But in Maine, for example,
13 it's similar to how we do in Vermont, have a --
14 you know, a pla- -- a paint -- if you want to
15 drop off your house paint, there's recycling
16 centers around that kind of move around the
17 state. That's essentially how Maine is. They've
18 had little activity in the first run with that.
19 They believe it's just more informing they've got
20 to do.

21 That's a situation where you take it from
22 your home and instead of necessarily putting it
23 down the toilet or in the wastebasket or
24 whatever, you just drop it off at the site and
25 then it's disposed of.

1 ATTENDEE 6: Right. I guess the question --
 2 even if you -- let's say we were going to go to a
 3 recycling mode, let's just say it assumes we
 4 figured that part out, how would we do that?
 5 Because it seems to me there'd be very few drugs
 6 that are -- I have a maintenance drug that I --
 7 and it's not a blister pack when I get it, and I
 8 get a three-month supply. It comes in a package
 9 via the mail.

10 MS. MOFFATT: Right. It doesn't have to be
 11 blister packed for it to go to a recycling
 12 center, to be taken into a waste center.

13 ATTENDEE 6: To go -- I'm talking about if
 14 we decided to recycle the drugs.

15 ATTENDEE 25: Use reuse instead of recycle.

16 ATTENDEE 6: Reuse. Okay. Reuse the drug.

17 MS. MOFFATT: Reuse. Okay. Reuse. Okay.

18 ATTENDEE 6: We try to reuse the drug.

19 MS. MOFFATT: Right.

20 ATTENDEE 6: Very few are blister packed or
 21 sealed when you get them in a tube.

22 MS. MOFFATT: Right.

23 ATTENDEE 6: I mean, you can get them in a
 24 bottle --

25 MS. MOFFATT: Right.

1 ATTENDEE 6: -- and you just open it up and
 2 use them. There's no seal on it.

3 MS. MOFFATT: Well, and that's exactly your
 4 point, I mean, that's where it's certain to have
 5 the savings and given the administration and
 6 oversight -- because you then have to have it
 7 overseen by usually a board of pharmacy. There'd
 8 be very few -- there would be a limited number of
 9 drugs --

10 ATTENDEE 6: Right.

11 MS. MOFFATT: -- even in a nursing home or
 12 hospital setting that would be able to be used.
 13 So again, I think the study speaks more to that
 14 that, you know, if you can keep your costs down,
 15 if you could do it in a very controlled way, you
 16 may be able to get some benefit. I'm not sure in
 17 the volume in Vermont that we would be able to
 18 take care of that, but again, we're very open to
 19 talking with you further around this. I'm just
 20 not sure that this is a magic bullet, if you
 21 will.

22 Shall I move on?

23 ATTENDEE 26: I would like that.

24 MS. MOFFATT: Okay. The next area, and I do
 25 have enough copies of this, and this is to start

1 the discussion around immunization funding. What
 2 -- and again, I'm going to just step back a
 3 little bit because I'm not sure that everyone
 4 understands how currently immunization funding
 5 has occurred in our state. And I'll -- what you
 6 have is -- oh, I apologize.

7 So for well over 20 years in our state we --
 8 and by -- I say we, let me back up and say the
 9 health department has an advisory board around
 10 immunization, particularly children's
 11 immunizations, and on that board sits
 12 representation from the world of family practice,
 13 nurse practitioners, and pediatricians. That is
 14 our Vermont essentially immunization advisory
 15 board.

16 So as a new vaccine becomes available at the
 17 national level, there is a national advisory
 18 board. They determine who the children should be
 19 that -- and whether it should be a recommended
 20 vaccine. Then that comes to our state and we
 21 essentially bring that group together to help us
 22 make that decision, should it become part of
 23 Vermont's package, if you will, available
 24 vaccines.

25 Actually, the advisory board worked

1 extremely well until several years ago when we
 2 had a shortage of the flu vaccine. We brought
 3 them together and they actually helped us figure
 4 out how we could redistribute and get to the gaps
 5 in the state. So that's a place where policy
 6 decisions around vaccines are made.

7 And actually Dr. Cortloff, our state
 8 epidemiologist, who actually oversees our
 9 immunization program, he's the one that actually
 10 conducts and oversees and chairs those -- that
 11 advisory group.

12 Over 20 years ago we as a state made a
 13 policy decision to have universal access. By
 14 that I mean that any child walking into any
 15 pediatric care provider setting would have a
 16 vaccine available to them and that that
 17 healthcare provider would not have to go to the
 18 refrigerator and figure out, well, this is my
 19 shelf for BlueCross vaccines, this is my shelf
 20 for state vaccines or whatever, that it would be
 21 one fridge, all the same vaccine, everybody would
 22 get the same access.

23 ATTENDEE 27: (Inaudible) that's all free.

24 MS. MOFFATT: And actually virtually all
 25 children's vaccines are (inaudible) free, other

1 than some of the flu vaccines for children, but
2 that's a discussion for another day, right?

3 So that's been the policy decision and I
4 will tell you in our state that's been a high --
5 a reason one -- for years we've actually had very
6 high vaccine rates because any door was open and
7 people didn't have to worry about how they were
8 going to bill.

9 The health department actually receives
10 federal funding and there's two streams of
11 federal funding, and this goes into it in more
12 depth. There's the Vaccines for Children
13 program, that's funding that comes from the
14 Center for Disease Control, comes to the state.
15 We essentially purchase that vaccine that we need
16 to take care of all children birth to 18. And
17 then we actually have a distribution center that
18 we're responsible -- we actually store it in the
19 health department. We then distribute it out
20 through our district health offices throughout
21 the state and then they move it out to the actual
22 healthcare providers based on their orders or
23 sometimes it goes directly to them. For example,
24 in Burlington it goes directly to the healthcare
25 providers wherever.

1 We then have a whole quality program around
2 the safe storage of that. One of the things
3 that's really critical in vaccine storage is the
4 temperature, and that's one of the issues
5 actually facing Vermont right now. We've
6 actually long been one of the leaders in
7 children's vaccinations. We're not -- once you
8 look at chicken pox, and in part because chicken
9 pox has to be frozen it can't be in one of those
10 stacked refrigerator -- freezer and refrigerator
11 because the temperature changes, so then you have
12 an unusable vaccine. So in our state some
13 providers have chosen not to vaccinate for
14 chicken pox, have children go elsewhere for that.
15 So we've got some work to do in that area.
16 Discussion for another day. So from a funding
17 place, the VFC program, the federal program, has
18 long carried Vermont in terms of getting its
19 children vaccinated.

20 There's also a section 1 -- 1 -- 317 federal
21 funding available. That funding can be used for
22 adults also. In our state, though, we prioritize
23 that 317 funding to go first to children. So
24 it's only when there's money left over that we've
25 been able to use it for pneumococcal for adults

1 and all. So the 317 funding has been level
2 funded for several years now and currently we're
3 ver- -- continue to be very concerned that that
4 funding is not going to be changed.

5 There are -- you have private insurers that
6 are also paying, and also Josh will speak to the
7 Medicaid's program. This is where -- before I
8 tell you where we are, let me just go -- and I
9 think the graph shows this. The cost to
10 vaccinate children has grown exponentially, and
11 there's a smaller graph, but the larger one I
12 think shows a better picture of this. And I can
13 actually provide you with a few copies in color
14 and try -- I think it would explain it a little
15 bit better and all. I think, though, graphically
16 what this shows is the enormous expense of now
17 vaccinating a child from 20-odd years ago when we
18 decided as a state to go universal vaccine. So
19 we're starting to hit a significant wall around
20 how we vaccinate and paper vaccine for our
21 children.

22 Let me also emphasize, the \$894 figure here,
23 no, that does not include the now HPV vaccine for
24 cervical cancer, which on the market is \$360 for
25 the three-course dose, so -- no, I'm sorry.

1 That's -- that's for one vaccine. That's for one
2 vaccine, it takes three courses. So this doesn't
3 represent what that potentially could mean.

4 Where we are right now -- and we have an
5 immunization study that we've just completed.
6 We're going to be working -- and Josh Slen and I
7 have already started working this and we've
8 already worked -- I'm sorry.

9 ATTENDEE 6: The cervical cancer vaccine,
10 are you getting a lot of resistance from, you
11 know, extreme right religious right type --

12 MS. MOFFATT: I will say no, we haven't, and
13 actually we have a cervical cancer report. I
14 didn't bring that with me today. Actually there
15 ha- -- there -- I will say we have not had that
16 type of call come to the health department, and
17 even as that cervical cancer study was done,
18 there was lower concern that -- because the focus
19 was cervical cancer protection. So most
20 individuals -- and there was quite an array of
21 individuals as part of that cervical cancer
22 study, and as they explored that did not find
23 that to be the case. But perhaps others of you
24 have heard --

25 Yes.

Page 38

ATTENDEE 27: I have a question about the cervical cancer vaccine. It's a three-part vaccine over a year or so, is it, or year and a half --

MS. MOFFATT: That's the ideal, yes.

ATTENDEE 27: So is that window -- does the state cover people who get that vaccine --

MS. MOFFATT: It's not at this point a recommended or required vaccine, HPV. And that's something in the next several months that I think as a state -- and I believe there is actually a bill that Representative Barnard (phonetic) is putting forward to have that public policy discussion about should it be a recommended or required vaccine. But at this point it isn't, so what you're finding is individuals, their insurers are actually vaccinating if the child and the parent actually request it. And Josh can speak specifically to Medicaid and how they're managing at this point. But at this point it's not required.

ATTENDEE 27: When is the age -- (inaudible) is it 15 or is it 18?

MS. MOFFATT: FDLE allows it from 9 to 26. The national advisory recommends 11- to

Page 40

resources together if we could be wiser in how we purchase vaccines in the state. So (inaudible) -- and beyond that I don't have a lot more detail for you today.

ATTENDEE 28: Just one question about the federal funding, the level funding. Where does that -- where does that emanate from? Is that a CDC or is it a --

MS. MOFFATT: It's through CDC -- CDC is the -- it's health and human services.

ATTENDEE 28: (Inaudible) making in Congress?

MS. MOFFATT: Yes.

ATTENDEE 28: (Inaudible) from? Okay.

MS. MOFFATT: Yes.

ATTENDEE 29: Yes. On the graph here, 2006, is there a reason why they're stacked in the order they are or is that just when they came on?

MS. MOFFATT: Usually it's when they came on and all, so you can see how we've continued to add on in terms of the number of vaccines that we have available for children which is certainly the good news.

ATTENDEE 29: Yeah. We're getting different -- so it's stacked by priority of importance.

Page 39

12-year-olds. So it -- I guess what I wanted to finish with is just the next step. So one of the things that not only Josh and I are doing with Medicaid and state funds, but also working with the primary provide- -- insurers in the state. BlueCross BlueShield and MVP in particular have come to the table to see if we could work out and be wiser in how we use our resources to purchase vaccine.

Let me make it clear, in some states you'll hear, in Rhode Island, North Dakota, and also in New Hampshire, they have a waiver on their CDC grant which allows insurers to buy on the CDC rate. It is the absolute lowest rate available. That was an old waiver they got under the cover. We weren't able to use that.

But Vermont also uses a Minnesota purchasing agreement that actually has a very low rate also. Not as good as the CDC rate, but lower. And actually I would say on comparison, actually very, very competitive if not lower than what even BlueCross BlueShield can buy through their marketing or purchasing ability.

So that's the discussions we're in right now, is to see whether -- as we could bring our

Page 41

MS. MOFFATT: We -- I think we'd end up -- we'd end up with the exact same cost --

ATTENDEE 29: (Inaudible) cost as much as -- the stack look any different or did we bring them on as we thought that this was the more important that we had or --

MS. MOFFATT: Usually it was exactly how they rolled out into the market as it became available, you know, essentially where we are with HPV. It's brand new to the market. And it's not unusual with any of these vaccines. We were actually in this situation about ten years ago with Hepatitis B, when we as a state made a -- tried to make a decision of should the Hepatitis B vaccine be available and be required for entry into 7th grade and at that point we as a state made that policy decision that it would be required for entry. That was about ten years ago with Hepatitis B, so it's kind of -- each vac- -- usually they're not so maybe contentious as Hepatitis B and potentially HPV could be, but we've got more talking to do together to get to that policy decision.

ATTENDEE 30: (Inaudible) prepared to go forward (inaudible) the fact that (inaudible) get

1 to buy three immunizations (inaudible) signing
2 yesterday (inaudible) report back when we served
3 on that committee in Bloomsburg (phonetic) we
4 (inaudible) --

5 MS. MOFFATT: I'm working --

6 ATTENDEE 30: -- any type of town
7 (inaudible) list or --

8 MS. MOFFATT: -- working on that right now
9 with Susan and actually trying to make sure that
10 coordinates also with Medicaid, so that -- but
11 again, as far as children we certainly would hope
12 that we would be able to support exactly what
13 we're doing (inaudible). I think ultimately what
14 we want to aim for is -- and actually (inaudible)
15 Hall speaks to this and I -- you know, I think we
16 need to recognize how significant the recognition
17 was around immunization as a prevention tool and
18 that we needed to invest in that area.

19 ATTENDEE 31: What's the timeline for us
20 getting the list?

21 MS. MOFFATT: I would think within less than
22 a month and maybe even sooner than that.

23 ATTENDEE 32: (Inaudible) is there
24 disagreement on which ones should be offered
25 or --

1 which we did this year. And it's a rather thick
2 study and so if some of you want it and some of
3 you don't, we're happy to give you them, they're
4 right here in the boxes. But we also brought a
5 copy of our preferred drug list. This is by drug
6 all of the drugs that we're actually managing on
7 that preferred drug list since it was one of the
8 items that you asked for us to talk about.

9 Again there's an enormous amount of detail
10 in this document. We have copies of it here
11 enough for the committee, and if not all the
12 committee members don't want copies today, we're
13 happy to make those available to the members of
14 the audience also, but --

15 ATTENDEE 36: (Inaudible) try to get just
16 one copy for our committee library.

17 MR. SLEN: That's absolutely fine, and we're
18 happy to give those directly to staff if you'd
19 like and have them put in your library.

20 ATTENDEE 36: (Inaudible).

21 ATTENDEE 37: I think it's a good plan.

22 ATTENDEE 36: I'm trying to save --

23 ATTENDEE 37: (Inaudible.)

24 ATTENDEE 36: Yeah. We have a larger plan.

25 MR. SLEN: I can talk for quite a great deal

1 MS. MOFFATT: No -- I think -- I will tell
2 you one of the stumbling blocks is HPV, whether
3 that should be in or not and what that would do.
4 I think we're right now looking at modeling in
5 terms of, given the resources, what would that
6 do, and you are essentially weighing HPV against
7 other adult vaccines. So that's the, if you
8 will, touchstone force right now.

9 ATTENDEE 32: Okay. Thank you.

10 MS. MOFFATT: Certainly. Thank you.

11 ATTENDEE 33: Joshua, are you next?

12 ATTENDEE 34: First time he's ever testified
13 below the (inaudible.)

14 ATTENDEE 35: He had it, I saw him bring it
15 in.

16 MR. SLEN: I left it in the back.

17 Good afternoon. I'm Joshua Slen, I'm the
18 director of the Office of Vermont Health Access,
19 and Ann Rogue (phonetic) is our pharmacy director
20 and she's not here with me today, but she would
21 be happy to come if there's questions that I
22 can't answer or there's items that are additional
23 items that you'd like to talk about with her.

24 I have in boxes, and we can give them to you
25 or not, our Medicaid generic reimbursement study

1 of time about the Medicaid program and I don't
2 want to do that, and also on the pharmacy
3 program.

4 ATTENDEE 37: Sounds like a threat.

5 ATTENDEE 38: Please don't.

6 (Static.)

7 ATTENDEE 39: We have a phone conference at
8 3:15.

9 MR. SLEN: Okay.

10 ATTENDEE 39: We're hoping to get a break, but
11 I don't think we're going to get a break.

12 MR. SLEN: Well, Senator, I think that's up
13 to you and the other members.

14 ATTENDEE 39: (Inaudible).

15 MR. SLEN: What I'll do is give a brief
16 overview of the different things that we're
17 doing, a very brief overview, and then I'll
18 answer questions instead of spending a lot of
19 time with a lot of detail.

20 ATTENDEE 39: (Inaudible) healthcare
21 industry (inaudible) finance this morning, do you
22 have any assessment as to how successful this is,
23 how much money are we saving?

24 MR. SLEN: First of all, there's been a lot
25 of changes to the pharmacy program over the last

several years and the newest change was in last January when the Medicare Modernization Act started covering drugs for elderly and disabled folks across the countries and in Vermont also. That moved about 30,000 people off our pharmacy programs and had a dramatic change in our total spending and the composition and the types of drugs that people were buying on -- that the Medicaid program was paying for. So --

ATTENDEE 39: Did that loss of monies have any effect on our ability to bargain with the now 30,000 less people? Did that diminish our ability to bargain with pharmaceutical companies for better prices because (inaudible)?

MR. SLEN: I can talk a little bit about that. We -- we have changed our supplemental rebate pool that we participate in and we currently participate in -- it's called the SSDC, which is the Sovereign States Drug Consortium, and it includes Maine, Ohio, and Vermont at this point in time, and there's several other states that are considering joining it.

That's a supplemental rebate grouping that we use to poolize Medicaid lives across multiple states in order to negotiate rebates beyond what

bucket for money.

In state fiscal year 2006 we spent \$168,000,000 on drugs.

ATTENDEE 41: 168-?

MR. SLEN: \$168,000,000, yeah.

ATTENDEE 42: In '06?

MR. SLEN: Yeah, in state fiscal year 2006.

ATTENDEE 43: (Inaudible).

MR. SLEN: The total budget in the state fiscal year 2006, I apologize, I don't have it in front of me. Something just south of a billion dollars, a little south of that, a billion.

ATTENDEE 43: 168- in drugs only.

ATTENDEE 44: (Inaudible) ask you a question, when you were talking about the drugs and this \$10,000,000 coming from supplemental and there's overall a 20 percent discount because of the programs we're in, did you say that 20 percent was a discount?

MR. SLEN: From the over 90 rebates, the rebates that we've received from the negotiations that the federal government does with all drug manufacturers, we received a discount off the -- what would be the price we would pay without the discount of about just something -- just over 20

are the OBRA rebates or the rebates that are required for participation in the Medicaid program across the country.

So we receive rebates that amount to something north of 20 percent on average of the price of drugs through the OBRA program, and then we receive an additional -- additional rebates. Last year we received \$10.4 million in supplemental rebates through the SSDC. So -- and that was formulating more than the year prior, so just as a --

ATTENDEE 40: What happens to the rebate when you get the rebate, where does it go?

MR. SLEN: It offsets our spending, so we offset it in our system against the actual spending for drugs. In comes in --

ATTENDEE 40: Does it stay in the pharmaceutical?

MR. SLEN: -- it come- -- no, it comes in and it's deposited through the -- I'm sorry?

ATTENDEE 40: Go ahead.

MR. SLEN: It comes in and it's deposited into our healthcare fund, so it goes into the Medicaid program. It doesn't actually sit in a pharmacy-only bucket. We don't have such a

percent on average across all. For some individual brand drugs we may receive discounts of 70, 80, 90 percent. But we don't -- on average it's just over 20 percent.

ATTENDEE 44: So then I guess my question, then, would -- you know, having been around -- or on committees discussing the -- all the ABCs of the drugs, but our pharmacists in Vermont are not necessarily involved in all of this; is that right? I'm trying to look at this \$10,000,000 and did any go back to the pharmacies in Vermont? But not everybody gets their drugs from our Vermont pharmacies. Is that what you do? Because we're talking all about the OBRA Medicaid drugs, right? And that's Vermont pharmacists.

MR. SLEN: Senator, the rebates accrue to the state.

ATTENDEE 44: Yes.

MR. SLEN: So we pay -- at the pharmacy we pay average wholesale price minus 11.9 percent for a brand-name drug at the pharmacy currently and we pay a \$4.75 dispensing fee for when our pharmacist dispenses that drug. That's our pricing methodology for brand-name drugs at the pharmacy.

1 We then -- we then send a file that allows
2 us -- that goes through our system and goes out
3 and we get out to CMS and we get a rebate that
4 comes back in, retrospectively, of course, for
5 that list of drugs that we dispense. And so all
6 of those drugs get allocated out by manufacturer
7 and go to each individual manufacturer for a
8 check, then it then comes back to the state and
9 offsets future spending.

10 So it doesn't actually get -- there's two
11 separate distinct processes.

12 ATTENDEE 44: I don't see it, though. I
13 have heard in the past from the local pharmacies
14 -- I don't know how to put it, but they -- you
15 know, guess what Medicaid or OBRA did to us now,
16 or that they're -- they don't seem to get -- they
17 do a lot -- they have to follow a lot of rules
18 and they don't seem to get any reimbursement for
19 the amount of work that they're out there doing.

20 MR. SLEN: Senator, I'll get to that. We
21 have a rather lengthy study that was done on
22 reimbursement and dispensing fees at the pharmacy
23 level and I'm happy to talk about that at length
24 today. It -- as it -- let me just run through a
25 couple of other things because that's a meaty

1 pharmacy team within the Office of Vermont Health
2 Access and our pharmacy benefit management
3 company, which prior to 2006 -- calendar year
4 2006 was First Health.

5 We did a procurement and First Health was
6 not the successful bidder on that procurement and
7 we currently have MedMetrics, which is a company
8 affiliated with University of Massachusetts.
9 It's a non-profit pharmacy benefit manager and
10 they have been active since January of 2006 in
11 managing our pharmacy spending. The total -- the
12 total contract costs over a three-year period for
13 that MedMetrics contract are \$1.1 million less
14 than what the three-year bid by First Health was
15 for the same period.

16 ATTENDEE 45: And what is the total? What
17 do we pay them?

18 MR. SLEN: I apologize, I don't have my --
19 yeah, I have my budget document in my bag, so I
20 can answer that question for you, but I don't
21 have it on me right this second.

22 When Medicare came in -- when Medicare came
23 in, about half of the individuals with
24 disabilities that were on our caseload moved over
25 to Part D and almost 96 percent of the elderly

1 subject in and of itself.

2 Last summer we did a study about generic
3 dispensing and it turns out that in Vermont just
4 over 62 percent of all of the drugs that Medicaid
5 pays for are generic drugs. So more than half of
6 all of our prescriptions that we pay for are
7 generic drugs.

8 Another statistic that's important in
9 concert with that one is that when a generic
10 equivalent's available, 98 percent of the time a
11 generic is what we fill. And so that means that
12 only two percent of the time when there's a
13 generic available is there a physician override
14 that says, no, give them the brand anyway.
15 That's a pretty high -- that's a pretty high
16 percentage. It's a very high percentage
17 actually.

18 Vermont has had a preferred drug list since
19 2002 and on our preferred drug list -- that's
20 managed through a group called our drug
21 utilization review board, which is made --
22 composed of doctors representing several
23 different specialties as well as pharmacists.
24 And that drug utilization review board manages
25 our preferred drug list with the help of the

1 that were on our caseload moved into Part D. And
2 so when you think about the caseload in Medicaid
3 and who's left, you know, who are we paying for
4 drugs for, we're paying for medications mostly
5 for adults under the age of 65 and kids and some
6 -- a few -- some disabled folks that are still on
7 the caseload also, but mostly adults and kids,
8 that's it.

9 ATTENDEE 46: Is that why it's skewed to
10 about 50 to 60 percent of drug costs as opposed
11 to the 48 percent that occurred?

12 MR. SLEN: Yeah. The fact is that the
13 individuals that moved off tend to take more --
14 have more prescriptions and different types of
15 prescriptions. We don't prescribe a lot of
16 arthritis medicines to kids, for example, and we
17 have more kids than anyone else on the program
18 now.

19 So Medicaid -- so, for example, the Medicaid
20 program pays for a lot of labor and delivery. We
21 pay for a lot of labor and delivery charges and
22 the medicines associated with pain relief for
23 that procedure in the hospital and afterwards.
24 And that's just a demographic in reality.

25 One of the other things that's happened as

1 we've managed the preferred drug list over the
 2 last year or so is that the drug utilization
 3 review board put in some additional edits into
 4 the new system that our MedMetrics contractor is
 5 utilizing and we've actually seen a dramatic
 6 reduction in the total number of prior
 7 authorizations that have been requested. And the
 8 reason for that is, one, because we have fewer
 9 people on the program, but it's even -- it's been
 10 more dramatic than even that. And one of the
 11 reasons is because the system that we're
 12 utilizing with the new vendor is an actually more
 13 efficient system at identifying specific
 14 instances where age and gender and diagnosis
 15 would allow an override automatically. And so
 16 our system is more efficient today, much more
 17 efficient than it was a couple of years ago. And
 18 that's not just a vendor -- a new vendor issue,
 19 that's also a change in the system overall.

20 So overall the vendors have gotten better
 21 at, and we've gotten better at, detailing the
 22 pharmacists at the -- at the point of sale and
 23 making sure that as many transactions can go
 24 through as possible. And so we've actually --
 25 we've actually dropped from 42,000 prior

1 under 18 because clinically it's inappropriate.
 2 And so when you have a new formulation that, say,
 3 takes two drugs that used to be only available as
 4 two separate pills and squishes them together and
 5 says now you can have it, you know, this new
 6 formulation for whatever the price is -- and that
 7 happens continually.

8 The manufacturers are every month coming out
 9 with new formulations and new varieties,
 10 fast-dissolving pills, liquids, gels, all kinds
 11 of things. And as those new formulations come
 12 out, in order to actually allow them to be
 13 purchased at the pharmacy counter, there has to
 14 be all of the appropriate edits in the system.

15 And so what I was responsive -- I was
 16 attempting to say was that sometimes, you know, a
 17 large system like this, those edits don't all get
 18 put in place correctly. And so there is -- it's
 19 a -- it is a system that is constantly being
 20 overseen and we have to be continually right on
 21 top of.

22 But I'm not aware of any specific individual
 23 beneficiary case where there was a problem that I
 24 could talk about right now.

25 ATTENDEE 49: No. That's the one I was

1 authorization requests down to 20,000 prior
 2 authorization requests.

3 To put that in context, on an annual basis
 4 we process almost two and a half million pharmacy
 5 claims, and so we're talking about very small
 6 numbers that are actually requiring some sort of
 7 action by a physician and/or pharmacist in the
 8 form of overriding.

9 ATTENDEE 47: Do you keep track of any
 10 mistakes or blocking people or any of the
 11 problems in the system? I mean, there was one, I
 12 think, a year ago --

13 MR. SLEN: There's always -- in any large
 14 system like this there's always some problems, if
 15 you will. There's always some things that are
 16 not going exactly according to plan. And those
 17 often have to do with new formulations of drugs
 18 that don't have the right edits put on them when
 19 they get entered in the system right away.

20 ATTENDEE 48: When they don't have the right
 21 what?

22 MR. SLEN: When they don't have the right
 23 edits on them, and so -- an edit is a -- it's
 24 like a little wall in the system so that you --
 25 that says you can't prescribe this to someone

1 thinking of. And then the only other one I was
 2 thinking of was people getting told that they
 3 don't have coverage any more. There was a couple
 4 of situations that I've run into and then they --
 5 we call -- a lot of them call and call and then
 6 they say, oh, yeah, that was a mistake.

7 MR. SLEN: I encourage all of you to contact
 8 me or my office -- Stephanie Beck, who's back
 9 here and is our legislative liaison -- with any
 10 of those individual issues because there are --
 11 especially in the pharmacy area.

12 As you know, the state of Vermont has
 13 expanded pharmacy benefits pretty dramatically.
 14 We cover individuals up to 225 percent of federal
 15 poverty with a pharmacy benefit. And even with
 16 Part D, we're wrapping individuals, meaning we're
 17 provi- -- we're paying all of -- for drugs that
 18 are not covered by the federal program and we're
 19 paying for cost sharing for that federal program
 20 for individuals that were on all of our programs
 21 in the state prior to Part D coming into place.
 22 And so we're still the secondary payer for the
 23 vast majority of individuals that were on our
 24 programs before.

25 ATTENDEE 50: Josh, we've only got a couple

1 minutes left and I'm looking at the PBMs and just
2 wondering in -- who negotiates the drug price
3 with the drug manufacturers for our prices? Does
4 your office or does the PBM do it? And what role
5 does the PBM play in (inaudible)?

6 MR. SLEN: Senator, the formulary -- the
7 preferred drug list that we work off of was
8 developed by our drug utilization review board.
9 The pharmacy benefit management company, First
10 Health previously, MedMetrics today, provides
11 staffing and staff reports and expert testimony
12 to the board to help them identify what agents
13 are appropriately placed on the preferred drug
14 list and what formulations might be restricted in
15 some way.

16 ATTENDEE 50: So they have an advisory, but
17 an expert opinion advisory role in the
18 development of the preferred drug list.

19 MR. SLEN: That's correct. And now Vermont
20 has what you can consider a mature preferred drug
21 list. So we're not adding new classes and
22 wholesale like states that might have just
23 started a year or two ago creating a preferred
24 drug list. What we're doing really is managing a
25 preferred drug list that's been functional in its

1 there is significant movement in that list over,
2 say, a 12-month period.

3 ATTENDEE 51: No, I don't want -- I think
4 you're misunderstanding me. You have a drug
5 utilization review board which is, I assume, a
6 separate board that does the reviews, all
7 additions or removals, deletions from the
8 preferred list. Have you or anybody in your
9 agency asked, requested of the drug utilization
10 to take and remove a drug or add a drug to the
11 preferred list?

12 MR. SLEN: Senator, the drug utilization
13 review board is an advisory review board to me,
14 to the Office of Vermont Health Access, so that's
15 exactly what we do --

16 ATTENDEE 51: Okay.

17 MR. SLEN: -- is we come to -- with a
18 package for this month that gets sent out several
19 weeks in advance of the monthly meeting and --
20 for the board members to review and then we
21 provide presentations at the board for drugs that
22 should -- for discussion about taking them on or
23 off of the list as well as all the formulation
24 and other --

25 ATTENDEE 51: Let me -- let me just -- a

1 current form for a long time. We did add, for
2 example, mental health drugs by act of the
3 legislature to the preferred drug list last year
4 and we grandfathered everyone that was on
5 medications to stay on those medications without
6 being subject to the preferred drug list.

7 We've been tracking as individuals have come
8 on to see how many overrides were requested from
9 the preferred drug list for mental health drugs
10 and they have not varied from that very small
11 percent across all drugs that we've been talking
12 about which tells us that at least at this point
13 that new folks that are coming on are being able
14 to find the medicines they need on the preferred
15 drug list, which is a good thing.

16 ATTENDEE 51: Along that same discussion
17 line, have you or anyone within your agency asked
18 the drug utilization board to remove or add a
19 specific drug from the preferred list, either
20 remove one or add one to it?

21 MR. SLEN: Senator, on a monthly basis --
22 and I don't attend all of the monthly meetings,
23 but on a monthly basis there are drugs that come
24 -- that may come off of the preferred drug list
25 or be added to the preferred drug list, and so

1 very popular drug, Lipitor, is that on the list?

2 MR. SLEN: I don't know the answer to that
3 question directly. You probably do.

4 ATTENDEE 51: I don't. I'm asking. It's a
5 popular drug.

6 MR. SLEN: Senator, I can -- let me not try
7 to answer that question while I'm sitting here.
8 Instead, I will make sure I pull the preferred
9 drug list that has all of the preferred agents on
10 it and I'll let you know.

11 ATTENDEE 51: Okay. What would be the
12 reasons why a drug might be removed from the
13 list?

14 MR. SLEN: If there was an equivalent, a
15 drug in that same class, therapeutic class, that
16 was providing a significant cost discount to the
17 state of Vermont, we would -- we would remove
18 potentially as long as the drug utilization
19 review board felt that it was clinically
20 appropriate to do so. We would remove the more
21 expensive agent and place it on the non-preferred
22 list.

23 So remember the preferred drug list is a
24 cost control mechanism that has to be done in a
25 clinically appropriate fashion. So the reason

1 for all the medical and pharmaceutical folks on
2 the board is to make sure that nothing is done
3 that's clinically inappropriate.

4 Meanwhile, placing a drug as a preferred
5 agent on the preferred drug list has a
6 significant impact on the number of -- on the
7 percentage of the market that that individual
8 drug will have in a state like Vermont. And so
9 that's why a preferred drug list brings
10 manufacturers to the table to negotiate
11 supplemental rebates with the state.

12 ATTENDEE 52: Okay. (Inaudible).

13 ATTENDEE 53: So going back to the
14 MedMetrics and First Health, can you talk a
15 little bit about how -- because I can't remember
16 or maybe I never knew -- how we went from First
17 Health to MedMetrics. Was it a bid process? We
18 saved \$1.1 million and then at some point would
19 it be helpful to look at what exactly it costs us
20 to gauge the PBM?

21 MR. SLEN: It was a full bid process. It
22 was a full procurement process following all of
23 the state's procurement guidelines, an RFP
24 process, request for proposals process. That
25 took a better part of a year to do. And the

1 ultimate where it was the best proposal -- the
2 best price and best proposal for support. And
3 I'm happy to provide you the cost and breakdown
4 for the new contract.

5 ATTENDEE 53: Okay. (Inaudible) just one --
6 is there an incentive within the contract for a
7 savings for the state?

8 MR. SLEN: There are a number of different
9 incentives in the contract, and so I'm happy to
10 talk about those.

11 ATTENDEE 53: Okay. Okay.

12 MR. SLEN: What we didn't get to, and I know
13 you're out of time, and I apologize, is this
14 reimbursement study, so I'm happy to talk about
15 that at another time. I'm sure that others in
16 the industry will be talking to you about their
17 reimbursement study also, if they haven't
18 already, and we're happy to come in -- Senator
19 was saying to your committee if that's where that
20 will be discussed, and go through it in more
21 detail.

22 ATTENDEE 54: Thank you.

23 MR. SLEN: Thank you.

24 (Conclusion of CD 21/Track 2.)
25

PROCEEDINGS

2 ---

CD 22/TRACK 1

4 ATTENDEE 1: Yeah. Okay. Okay. And Senator
5 Racine is here and Robin has passed or is passing
6 out your document, I believe, I'm looking for it
7 here and -- okay. We have that. So the floor is
8 yours and I think we're looking for your advice
9 for things that have happened elsewhere in the
10 nation and things that Vermont might consider as
11 part of our ongoing effort to control the cost of
12 prescription drugs.

13 MS. TREAT: Okay. Well, thank you very much
14 for the opportunity to testify, and I want to say
15 thank you to Senator Cummings (phonetic) and
16 Senator Racine and it's always a pleasure to
17 return, even if telephonically, to my home state
18 of Vermont.

19 I have put together a kind of a laundry list
20 and I know there's going to be some repetition.
21 Your staff was very helpful in sending me the
22 materials that they've already distributed and I
23 know there will be some overlap. And I have
24 tried to tailor this to the programs you already
25 have, but I have to say that I've heard of other

1 (inaudible) and wasn't able to fully (inaudible).
2 I may talk to you about plans that were already
3 done, but I tried not to do that. But as long as
4 you understand that right from the get-go.

5 ATTENDEE 1: Okay.

6 MS. TREAT: What I've done is kind of come
7 up with a list of actually 11 or 12 policies that
8 I've broadly grouped into certain categories, and
9 I thought I'd just run through them. You know, I
10 have some thoughts (inaudible) I think some of
11 them are more successful and less successful than
12 others. I haven't gone into a lot of detail
13 about the cost savings, but I know you have a
14 separate presentation on that. But you're
15 welcome to, you know, interrupt at any time.
16 It's a little weird by telephone, so -- but, you
17 know, I'd appreciate if you'd stop as I go along
18 and -- you know, if things need clarification.

19 ATTENDEE 1: Okay. And -- if --

20 MS. TREAT: So I don't know what -- you
21 know, how you want to run this.

22 ATTENDEE 1: Okay. I think we'll probably
23 end up interrupting you a couple of times as
24 hands go up. It would be helpful if you know
25 anything about savings of individuals and which

1 is the most successful just to kind of indicate
2 that as you go through the programs --

3 MS. TREAT: And I do have some separate
4 documentation, some of which I've provided
5 already to your staff about some of these
6 programs. (Inaudible) you know, sending the
7 25-page documents.

8 ATTENDEE 1: No.

9 MS. TREAT: Already I believe it could be
10 longer.

11 So anyway, the first thing I started talking
12 about here are pricing provisions. You know, it
13 -- Vermont really was a leader on this early on
14 when they (inaudible) and those of you that were
15 in the legislature at this time may recall that
16 the original version of Maine (inaudible) Vermont
17 (inaudible) actually established prices for
18 medication in the state and it evolved into a
19 discount drug program basically referencing
20 (inaudible) on a large (inaudible) pool as well
21 as in Maine a provision that connects the
22 Medicaid preferred drug list to the Maine RX
23 program in that it's an opportunity for the state
24 to put drugs on the preferred drug list or rather
25 on the prior authorization list should a company

1 not be willing to negotiate with a company good
2 prices to benefit not only the Medicaid program,
3 but also the discount drug program. And I know
4 that you have a healthy Vermont (inaudible)
5 program, it does not have that leverage provision
6 in it, but you do have the (inaudible) for that
7 kind of approach.

8 There are other states that have taken a
9 crack at this pricing issue with some different
10 legislation, and I want to state right off the
11 bat that there are some complex legal issues
12 here. It's not entirely clear how far states can
13 go with all of this. And those issues are being
14 worked out in the courts right now, although
15 there are certainly measures that states have
16 taken in other states that have not been
17 challenged. I also don't know to what extent
18 they've actually been implemented.

19 Just right off the bat with the Maine RX
20 approach in terms of the leveraging provision has
21 been upheld in Vermont including (inaudible)
22 Supreme Court. Other approaches that are on the
23 books right now include the District of Columbia
24 which has a law which provides for judicial
25 remedy including damages and injunctive relief

1 where a drug price is in excess of 30 percent
2 over (inaudible) income. That is a law that has
3 been on the books for a couple of years now.
4 It's been going through the court system what was
5 initially enjoined by the District Court in the
6 District of Columbia, the federal court there,
7 and it's now on appeal. And actually we've
8 submitted a (inaudible) that. It is something
9 that might -- our view is that it might be
10 possible to draft a law that takes this approach
11 that is perhaps better drafted.

12 There are some problems with the way this
13 law was drafted. It only applies to patented or
14 brand-name medications, so there was a question
15 -- legal questions right off the bat. So that --
16 it takes the reference price that you would look
17 to to find out whether either the drugs are
18 overpriced to prices in other countries, only it
19 doesn't look to prices within this country. And
20 it doesn't have a very good (inaudible) showing.

21 I mean, you could come up with a law that
22 looks particularly at drugs that benefitted,
23 let's say, people who have cancer or who are in a
24 life or death situation where the drug price is
25 particularly high. And perhaps a targeted

1 approach to this, you know, might have a
2 different legal consequence if it were
3 challenged.

4 I can push to the Colorado type (inaudible)
5 statement that (inaudible) and this is just one
6 example of it. The thing about these laws is
7 they're mostly focussed on their payment
8 situation, you know, so outlying activity that
9 were (inaudible) prices that -- in a state of
10 emergency. So it's a very limited provision, but
11 it does give you an example of some of the legal
12 approaches that the states have been taking and
13 those weren't generally challenged.

14 Pennsylvania has a really interesting law
15 which is still -- and the courts are implementing
16 and also what I would call reference pricing law
17 where they pick a price -- in this case the
18 federal supply schedule was used by the medical
19 administration as a reference prices of -- price
20 that -- their price, I guess you would say, in
21 the case that (inaudible) is going to come up
22 with an appropriate price for medication based
23 on, you know, all the prices out there, you're
24 looking at what's there, the most fair price and
25 the federal supply schedule (inaudible). They

1 also have an intent to back out the costs that
2 are marketing and advertising as being not an
3 appropriate price -- part of the prices charged
4 to their state's revenue.

5 They're, as I said, in the process of
6 implementing that. They've just come out with
7 rules about advertising and marketing. It's
8 something that they feel that Vermont's already
9 done. Obviously Vermont's way ahead in that
10 regard in terms of having that information if you
11 were interested in following along with something
12 that West Virginia has done.

13 The Maine RX law actually has a very
14 specific provision separate from this leverage
15 provision I'm talking about which actually does
16 say that the state has authority to go in and
17 require prices to come down to a fair level, that
18 level being around what the price for Medicaid
19 is.

20 And this provision, however, is a wonderful
21 provision on paper, but has never been
22 implemented. It was enjoined initially at Maine
23 RX litigation and what happened is that the state
24 I think in part confirming those resources in
25 terms of legal research versus the financial

1 myself back to the legislature, (inaudible)
2 myself, so I thought you might be interested as
3 well, but it was something I learned about by
4 (inaudible) that apparently (inaudible) have been
5 made. I even have insurance where your co-pay is
6 actually more than what the drug costs, and they
7 charge that. So it's a way of just kind of going
8 in and regulating that and addressing the
9 co-pays. So that's the pricing stuff that I
10 wanted -- maybe I should just pause to see if
11 anybody has any questions on any of that.

12 ATTENDEE 1: Any questions? I don't see any
13 hands, so keep going.

14 MS. TREAT: Okay. Well, keeping on our
15 focus on price, as you all know I am sure,
16 there's a great deal of discussion out about
17 price (inaudible) and being able to make good
18 choices, states having information. So this has
19 been reflected in the pharmaceutical area by
20 state laws and other programs, many of them
21 implemented through the AG's office and, quite
22 frankly, the (inaudible) summary of this
23 information is in the report of your own Attorney
24 General that (inaudible) has help put together,
25 which he's apparently been updating right now.

1 resources decided to focus on the issue that they
2 felt was most important which was upholding the
3 discount drug program itself and kind of let this
4 law go and said they just didn't even appeal the
5 decision that -- that section of the law where
6 it's unconstitutional, the ruling of the court
7 based on commerce clause, which is that the state
8 really didn't have jurisdiction over the drug
9 company that's outside of the state.

10 And that's an issue that's being litigated
11 in other contracts around the country right now.
12 The jury's still out on whether or not a state
13 can take this approach. And I (inaudible) to the
14 Wisconsin law which has been on the books and not
15 been challenged as far as we know, and that takes
16 a very similar approach to the Maine RX law. So
17 there may be another approach to looking directly
18 at prices, you know, that may well be upheld.
19 But again, this is all areas where it would be
20 sure to be challenged by the industry I would
21 suspect if you put one of these on the books.
22 But there may be ways to address it and ways that
23 can be more rather than less places to be upheld.

24 And then I just recently put something down,
25 this -- I happened to have just gotten elected

1 But these states have set up a program where
2 people can log on to the Web and find out what
3 the prices are in other states and different
4 (inaudible) at different pharmacies. (Inaudible)
5 it's a good way to find out what's going on in
6 different pharmacies and help people price
7 compare. It does not get at the core issue of
8 pricing set by the manufacturer, but it does help
9 people -- if you do have prices there between
10 pharmacies, it does address that.

11 One of the issues is -- is that -- and I
12 know (inaudible) some states haven't wanted to do
13 this, is that it basically encourages people to
14 go to several different pharmacies to get their
15 several medications. Because what often happens
16 is that the same pharmacy doesn't necessarily
17 have the low price for all of the drugs you're
18 taking, you know, there might be three different
19 pharmacies with a lower price depending on how
20 many drugs you're taking. Which means that if
21 there's drug interaction or things like that or
22 you're taking drugs together you shouldn't, the
23 pharmacist you go to might not know that.

24 Now, when you deal with that, if you were
25 interested in the whole electronic record push

Page 74

1 right now to make sure that those records can,
2 you know, be electronic and can be shared, and
3 that would be one way of addressing this issue if
4 you wanted to go with a -- the pricing.

5 There's other kinds of disclosure. I
6 mentioned that -- a Maine law which requires the
7 retail price to be printed on the receipt. And
8 you may have something like that, I'm not sure.
9 But it's yet another way to continue to
10 (inaudible) the actual cost of drugs and so that
11 if your co-pay is \$40 but the actual cost of a
12 two-month supply is 400, that would be on the
13 receipt and you would find that out.

14 And then the third disclosure provision that
15 I've mentioned is one that actually is my
16 favorite right of the state senator, I put in in
17 part because of discussions with the attorney
18 general of the state of Maine, which like I
19 believe Vermont has been involved in a series of
20 investigations and also lawsuits for pricing
21 fraud essentially under the Medicaid law where --
22 as I know you all know, where the state's
23 supposed to be getting the corporate best price
24 under Medicaid and, in fact, we're not being that
25 -- not given that price. And there's private

Page 76

1 joined by Maine and West Virginia. Maine
2 (inaudible) come out with its regulations and
3 it's going to be enforcing it now. West Virginia
4 is in the process of it (inaudible) weeks. But
5 there's a lot of other issues (inaudible) if you
6 wanted to and I know your focus is on pricing
7 and, you know, there's reasons to do -- to focus
8 on advertising and marketing which are related to
9 the cost of drugs (inaudible) that are perhaps
10 unrelated to that.

11 But there certainly is a belief among many
12 states that has focussed on addressing
13 advertising and marketing that their -- their
14 concern is about health and safety, their concern
15 is about privacy, and their concern also is about
16 making sure that people aren't -- and doctors
17 aren't being directed to prescribe the absolute
18 most expensive drug which may not be a
19 (inaudible) drug because of the intensity of
20 advertising and marketing. So there is a link to
21 -- you know, whether we can come in with the
22 numbers on that, that's another question.

23 That said, the big hot issue right now which
24 is pending in a court near you, (inaudible) on
25 Monday is the New Hampshire (inaudible)

Page 75

1 companies that provide this information to go
2 through (inaudible) from the drug companies. And
3 basically this provision requires the drug
4 companies to ensure that the information that the
5 states are getting is, in fact, accurate.

6 And I mentioned AWP, I know that there's
7 some changes to how pricing is going to be
8 recorded. The Maine law includes a whole panoply
9 of these different pricing mechanisms. And it --
10 basically if there's violations of this, those
11 violating it would be rife for perjury as well as
12 the other (inaudible). So it gives the attorney
13 general additional legal fire power essentially.
14 And hopefully you'll do fine with that in the
15 first place so that you won't be ending up in a
16 (inaudible) situation (inaudible). So that's my
17 discussion of disclosure and I think I'll pause
18 and see if there are any questions here.

19 ATTENDEE 1: Okay. Any questions at this
20 point? Okay. None. All right.

21 (Static.)

22 MS. TREAT: Vermont has been the leader in
23 this, you're the first state and for a long time
24 the only state to require disclosure of marketing
25 and advertising spending. Since then we've been

Page 77

1 prescription confidentiality law that --
2 restricting you of identifying information --
3 doctor or patient identifying information from
4 being released to pharmaceutical companies and
5 other companies for the purpose of marketing that
6 can still be used or carrying out clinical
7 trials, research, assessing Web (inaudible)
8 properly or whether they're (inaudible) or, you
9 know, cost-controlled Medicaid program, any of
10 those (inaudible) to be used for. But aggregate
11 data have been still used for marketing purposes,
12 but what is not allowed is a retailer coming into
13 an office with a profile of a doctor saying that
14 that doctor has prescribed X, Y, and Z, and then
15 targeting their marketing towards that doctor's
16 prescribing practices.

17 This is in the courts right now. I would
18 say there's at least ten states that have pending
19 legislation on this issue, and I believe Vermont
20 is one of them or will be soon if you do not have
21 a bill yet. So that is happening. And, you
22 know, I have all the briefs on that. We actually
23 submitted, I think, a brief, but a big part of
24 (inaudible) actually was the focus on the effect
25 of this marketing on the state costs for the

1 prescription drugs program.

2 The second bill relates to something that
3 Florida enacted. We -- I mentioned electronic
4 prescribing and electronic records. There's a
5 huge push to do that not only in (inaudible)
6 prescription drugs, but also health care
7 generally. It's the big new thing. (Inaudible)
8 make health care better for everybody, et cetera,
9 et cetera, and I believe that you've also done
10 something in this area (inaudible) but I think
11 that's part of your focus.

12 Anyway as -- particularly if they're making
13 more restrictions on what retailers could do, for
14 example, like the New Hampshire law, there's
15 going to be a real shift towards marketing to
16 doctors and others through electronic means.

17 So this Florida law is one example of that
18 standing (inaudible). It may not actually be a
19 (inaudible) but perhaps it needs to be. I get
20 e-mails from a lot of pharmaceutical blogs and
21 this is a hot topic right now, this whole shift
22 towards electronic prescribing, electronic
23 everything, and I think you're going to see a lot
24 more marketing and advertising that's done in
25 that way. And this might be good to have a

1 months and then they're on to something else.

2 And what seems to be the case is that the FDA, by
3 the time they get wound up to do something about
4 it, pretty much the advertising campaign's over.
5 So this gives explicit authority, still the AG
6 may already have that authority and probably may
7 do as well under the Unfair Trade Practices Act
8 on misleading advertising, but this makes it very
9 specific authority which they were quite happy to
10 have. It hasn't yet been used by anybody to go
11 after anything.

12 I then have listed on your handout, it's --
13 one, two, three -- four (inaudible) unsuccessful
14 pieces of legislation that I just thought were
15 interesting focussing on this whole issue of
16 advertising and marketing. I think one of the
17 legislators, and some of you may be among them,
18 who would just like to ban the whole practice of
19 the drug consumer advertising program. There is
20 questions about whether that can be done, which
21 is why Maine, for example, would not be
22 (inaudible) for now. But these are some
23 different measures that different states have
24 looked to to see whether they can (inaudible) the
25 lines maybe in terms of addressing advertising

1 heads-up on so that any laws that pass, you know,
2 look at that issue as well as this more
3 traditional means of marketing that we're more
4 familiar with.

5 Another area would be misleading
6 advertising, which really goes in large part to
7 help (inaudible) standard people can say whether
8 they're really good or not so good standards, but
9 there's a lot in those standards that address
10 misleading advertising and they address adverse
11 effects of what's fully communicated to not only
12 medical providers, but also direct consumer
13 advertisers to consumer patients.

14 FDA does very little enforcement of those
15 and often it's (inaudible) less statistics from
16 all of that. As a consequence to that, Maine has
17 a law in 2005 which adopts as part of the Maine
18 law the FDA misleading advertising standards and
19 gives to the AG authority and to others under the
20 AG Unfair Trade Practices Act, to go into court
21 and -- false advertising or get payments in full.

22 One of the issues around FDA enforcement is
23 that frequently it doesn't really happen until a
24 lot of advertising has already run its natural
25 courses. It only goes for a certain number of

1 and marketing.

2 And then finally what I've listed here is a
3 whole -- a number of things that focus on the
4 activities of drug (inaudible) dealers who the
5 salespeople come into the offices, provide
6 information about the latest and greatest drugs,
7 and also provide some (inaudible) gifts and
8 payments in various forms. There is, of course,
9 a variety of industry and doctor standards that
10 have been (inaudible) and say we're not going to
11 get into a conflict of interest situation, we're
12 not going to take this and that. But from all
13 the reports (inaudible).

14 Interestingly there is a law on the books
15 which was passed in 1993 in Florida that bans
16 gifts to doctors or pharmaceutical companies.
17 There's a bunch of exemptions to this law, it's
18 not written in (inaudible) like I think and it's
19 not really clear that's ever been implemented.
20 It hasn't been challenged from the courts as far
21 as we know, so it appears to be a good law on the
22 books and a model for (inaudible) to look at.

23 Massachusetts last year in its -- the Senate
24 version of the budget passed the more stringent
25 version of this gift stand, and -- but it didn't

1 make it through the final budget after
2 consultation with the House.

3 I have drafted, working with the
4 Massachusetts folks this year, a bill which we
5 felt pretty good about that if you were
6 interested in this would be a model bill you
7 could take a look at that would -- it's actually
8 the clearest reading of the Massachusetts version
9 (inaudible) but it's a tighter version than the
10 Minnesota one, and it might be something you'd
11 like to look at.

12 The other area where states have attempted
13 to do something but not successfully so has been
14 legislation that would set registration
15 provisions or (inaudible) provisions, sort of an
16 education criteria for drug retailers. And that
17 hasn't gone anywhere. And I actually sat through
18 one of the hearings on that and the entire room
19 was filled up with hundreds of retailers. And I
20 think that's a pretty powerful lobby. But
21 anyway, those haven't gone anywhere, but there's
22 been interest in doing something in a number of
23 states, and I've listed a couple where that
24 legislation was not successful. So there you
25 have advertising and marketing, and again I would

1 information that wouldn't be -- this is the best
2 drug but (inaudible) newest drugs but here are
3 all the options, here's what they cost, here's
4 the medical and the clinical evidence, here
5 perhaps are some alternative (inaudible) drugs
6 also that involve exercise, diet, et cetera, et
7 cetera.

8 And I know that there's a small effort going
9 on in Vermont right now. I wanted to mention
10 that I have been working with an organization
11 called The (inaudible) Foundation, it's a
12 (inaudible) has spun off from our group which is
13 focussed on working with legislators and
14 (inaudible) choices is really working more
15 generally on prescription drug issues. And my
16 colleague, Ann Wolf (phonetic), is there and has
17 been in active communication with doctors as well
18 as health people in Vermont, New Hampshire, and
19 Maine, and there may be a more (inaudible) to see
20 if there's some interest (inaudible) a
21 state-to-state (inaudible) detailed program. And
22 there's tremendous interest in the New Hampshire,
23 we know, in doing this that really came out of
24 the whole confidentiality bill debate and
25 discussion.

1 pause and see if there's any questions on that
2 point.

3 ATTENDEE 1: Questions? Don't -- don't see
4 any.

5 MS. TREAT: Okay. I hope I'm not putting
6 anybody to sleep here.

7 ATTENDEE 1: Oh, no, everyone's awake.

8 ATTENDEE 2: No, it's great.

9 MS. TREAT: You can't tell when you're on
10 the phone. All right. Well, this leads
11 naturally from the detailed discussion to my next
12 section which is what I call communicating
13 effectiveness (inaudible) evidence.

14 One of the things that -- you know, response
15 to all of this heavy-duty marketing, some of
16 which is misleading, all of it's expensive and
17 it's definitely effective in shifting prescribing
18 practices and also what patients ask for. It
19 states that (inaudible) is something they can do
20 to counteract that.

21 Now, you have a wonderful provision in your
22 log that says that you have the authority to do a
23 detailed program to provide evidence-based
24 research, get it out to doctors and other medical
25 providers about, you know, (inaudible)

1 And so I just wanted to put that on the
2 table. And, you know, the big difficulty with
3 doing (inaudible) detail is you have to come up
4 with a pot of money in the first place in order
5 pay for these trained, you know, pharmacists,
6 nurses, doctors to go out into the countryside
7 and the cities and meet with people and talk to
8 them, you've got to have money to prepare the
9 materials.

10 However, Pennsylvania is doing this in a big
11 way. They've already prepared a lot of
12 materials, they have the model, they're
13 evaluating that, and I think we -- and I speak
14 because I live in north Pennsylvania myself --
15 we're in a great position to perhaps take that
16 information and those materials and run with it
17 and do a bunch more (inaudible) they've already
18 put in the original cost, quite frankly. And I
19 think there's some -- you know, potentially
20 there's money available for this.

21 I don't know if Vermont was a party to the
22 Bayer drug settlement which just came down which
23 was related to marketing, the corporate
24 marketing. I know Maine was, there was \$200,000
25 that went to Maine because of that. It's

1 supposed to be used to address issues around
2 marketing. That would be a perfect pot of money
3 to put into teaching appropriate -- maybe
4 spending on the pilot level to actually do this.
5 Obviously you already have the authority.

6 So I'm a big fan of this. In a way it seems
7 like it's a little frustrating to put state money
8 into something to counteract all of the private
9 sector stuff that's going on that you can't get
10 rid off, but Pennsylvania believes -- and based
11 on some clinical data that Jerry Abrams
12 (phonetic) has put together, they believe they
13 could actually save money ultimately. The real
14 challenge is getting off the ground and funding
15 it in the first place because there will be
16 (inaudible) later on because it's going to
17 totally shift the prescribing pattern. And that
18 is what the evidence has shown.

19 ATTENDEE 1: Okay. Sharon, I do have a
20 question.

21 MS. TREAT: Sure.

22 ATTENDEE 1: And I (inaudible), see if she
23 can hear you. If not, I'll repeat it.

24 ATTENDEE 3: Does this help? Can you hear
25 me, Sharon?

1 like my parents live right across the river from
2 New Hampshire, they live in Vermont, and the
3 closest drug store is across the river.

4 So, you know, I think there might be some
5 real (inaudible) by doing a regional program, you
6 know, that -- in a sense you want to look at
7 documents from a medical center in New Hampshire
8 but it's still (inaudible) I believe that are
9 associated with Vermont as well on that
10 (inaudible) because people in Vermont go there
11 for their medicines. So, you know, I think there
12 could be some of the same that we've done in that
13 (inaudible) level. So -- but that's where the
14 costs are primarily. But --

15 ATTENDEE 1: Okay. We have a follow-up.

16 MS. TREAT: Yes. Well, just quickly I
17 should tell you in addition to the drug
18 settlement money, again, I mean -- again, I don't
19 know Vermont's situation on this, but Maine has a
20 Fund for a Healthy Maine which is a track of
21 government money, most of it goes to health care.
22 Some of the stuff there -- if you really did save
23 money, you'd have a revolving loan essentially
24 that would (inaudible) and get repaid as they
25 make payments.

1 MS. TREAT: Not very well.

2 ATTENDEE 3: The question is --

3 ATTENDEE 1: Come on down.

4 ATTENDEE 3: I'm sorry?

5 ATTENDEE 1: You can come on down.

6 ATTENDEE 4: I can do the question from here.

7 ATTENDEE 3: Okay. My question is, Sharon --
8 can you hear me now?

9 MS. TREAT: Yes.

10 ATTENDEE 3: That's my first question. My
11 second one is, is if Pennsylvania's done all the
12 work on all these drugs, what does Vermont have
13 to spend money for? Can't we just do what they
14 do and use their stuff?

15 MS. TREAT: Well, the biggest expense is you
16 need to take the salary of the people who
17 actually go do this. So even -- and I'm not sure
18 that they've actually entirely done all of the
19 materials, but there's -- they've done a lot.
20 But essentially you're going to have to pay the
21 salaries of the people who are going to go out
22 and meet with these doctors and other medical
23 providers. And that's actually one of the
24 reasons I thought -- and this comes from the fact
25 that in part I'm familiar with the territory,

1 ATTENDEE 5: When I looked at the written
2 materials, Sharon, it shows a Web site for this
3 process or this service, and I had the idea it
4 was something that a doctor or a nurse or whoever
5 the prescriber is could log on to check out the
6 stack that wanted to prescribe or whatever it is.
7 Is that something that we could -- and then of
8 course we'd have to pay our share of the
9 staffing, though, but is that something that's
10 been looked into?

11 MS. TREAT: Yes. I mean, currently there's
12 a possibility in the future -- if you go to
13 (inaudible) down the page (inaudible) that the
14 Oregon Effectiveness Review Project, which some
15 states belong to and they get all -- complete
16 access to the materials. And also what Maine's
17 doing as part of the misleading advertising law
18 that they have, it gave the AG authority to
19 enforce misleading advertising standards.

20 Also at the request of the Department of
21 Health and Human Services, it required that
22 department to set up a public and provider
23 education program. It's funded through
24 (inaudible) drug companies and one reason it's
25 been slow getting started is states have been

1 rather reluctant to (inaudible). However, they
2 are just about -- according to (inaudible), she
3 sets up this program, they're just about to go
4 out with an RMP to do a (inaudible) education
5 program that will also have a Web portal to these
6 clinical trials information and other information
7 that would be helpful.

8 I think that's great. I do think and I
9 believe that many (inaudible) were (inaudible)
10 from Harvard Medical School among other, in fact,
11 (inaudible). His words will show you that, you
12 know, every opportunity to deal with research on
13 the Web and click on something is not the same as
14 (inaudible) someone coming into your office,
15 having a relationship with you. I mean,
16 retailing works. And even if they're not giving
17 away free gifts, you know, from that drug
18 retailer, what they've found is that there's a
19 law to benefit and it's essentially more
20 effective. Because your (inaudible) is in the
21 office and, you know, giving someone a Web site
22 to click onto is good, but it's not going to
23 counteract the detailing in the same way.

24 And the other thing that we're finding in
25 Pennsylvania is that it's a real value to having

1 this relationship with the provider, particularly
2 for the Medicaid program. I don't know how it is
3 in Vermont, but one of the things we haven't
4 talked about yet is a preferred drug list and
5 things like that. At times a contentious
6 relationship between doctors and the Medicaid
7 program is partly around fees.

8 But in any event, one thing that they've --
9 a real benefit they've found is that this has
10 been a real positive relationship between the
11 Medicaid program retailing, you know, aspect and
12 the doctors, kind of -- you know --

13 ATTENDEE 1: Sharon, one of the things that
14 was brought to our attention by staff is that
15 right now we can, you know, know differences in
16 price, but that there is -- don't have any
17 studies that tell you differences in
18 effectiveness. It might be worth 10 percent more
19 to have a drug that is 40 percent more effective.
20 And he thought there were trials underway or
21 studies underway to that. Do you know anything
22 about that?

23 MS. TREAT: That would have compared one
24 drug to another?

25 ATTENDEE 1: For effectiveness.

1 MS. TREAT: Yeah. I mean, (inaudible) this
2 gets into a much larger question about who's
3 doing all of these clinical trials and what are
4 they trying to prove. And, you know, usually
5 they're done by drug companies that would like to
6 get their drug on the market and they're
7 essentially testing out the drug, I guess.

8 ATTENDEE 1: Right. Yeah. And that's --
9 yeah, that's what he said, that it reduces
10 heartburn, but does it reduce it as well as or
11 less well than the more expensive drug?

12 MS. TREAT: Right. And, I mean, that's a
13 problem that I don't know that Vermont's going to
14 be able to solve because unless, you know, you've
15 got one pot of money I don't know about to
16 independently fund this sort of study --

17 ATTENDEE 1: He thought that there were some
18 studies underway. Robin looks like she knows
19 more than I do.

20 MS. TREAT: But I think that's more
21 (inaudible) I think that Congress is actually --
22 or the FDA is starting to look at this issue more
23 directly at things that need to be done. I mean,
24 it's just that there's so many tremendous shifts
25 over the last 10, 15 years from --

1 ATTENDEE 1: Okay.

2 MS. TREAT: -- you know, a lot of the
3 independently done clinical studies having it
4 largely being done by interested parties and it
5 (inaudible) look at.

6 ATTENDEE 1: Robin just pointed out it's on
7 your sheet under RN evidence-based --

8 MS. TREAT: Yeah. And again, that -- a
9 number of states have joined that as -- in
10 addition to the evidence-based and the
11 information could be used in a variety of ways.
12 It could be used to help draft what you put on
13 your preferred drug list, what do we (inaudible)
14 entire authorization forms. You know, PO can be
15 based on what you're giving those rebates for or
16 they could be based on what you think is the best
17 drug.

18 This Oregon (inaudible) though, getting
19 information to states and others who have bought
20 into their program to identify what is the best
21 treatment and the best information including the
22 best clinical trial information. So that's
23 something that, you know -- and (inaudible)
24 encourage that, I think, but it is a cost until
25 that information is available without paying

1 anything for this certain amount of freeloading
2 going on.

3 But I think (inaudible) also it's talking
4 (inaudible) detailing that North Carolina is a
5 state that has viewed the Oregon information in a
6 program that did (inaudible) they tried to
7 provide information to doctors and their offices.
8 So it could be used to help any effort in that.

9 ATTENDEE 1: Okay.

10 MS. TREAT: Okay. So I've already mentioned
11 the posting of clinical trial results in the
12 Maine law that said that these clinical trials
13 need to be posted. People are sometimes
14 confused. This is the only state in the nation
15 that does this now. There is posting of the fact
16 that the clinical trial is done, and that's a law
17 that, you know, this is ongoing. There's
18 somewhat incomplete compliance with that law.
19 What the Maine law does, though, (inaudible) is
20 the results need to be posted even when they're
21 bad results so that the clinical trial might be
22 ended because the results are not positive
23 results to that particular drug.

24 ATTENDEE 1: Posted where?

25 MS. TREAT: It's posted on the Internet.

1 ATTENDEE 1: On the Internet. Okay.

2 MS. TREAT: Everybody can get these -- the
3 notes, whether you're in Maine or not obviously.
4 And the state is going to develop a Web site
5 (inaudible) so that there'll be a people-friendly
6 way of accessing the information.

7 But I will tell you this is a very
8 complicated thing. I have actually submitted two
9 or more sets of comments on the state's rules.
10 If you are interested in pursuing this, I would
11 suggest not copying the Maine law verbatim
12 because there are problems with it in that it was
13 the first law that was drafted and those that
14 drafted it weren't that familiar with clinical
15 trials and the lingo as they should have been.
16 So there's information that probably should be
17 posted that's not posted because the Maine law is
18 stating the -- there is a difference between
19 states.

20 ATTENDEE 1: Okay. We'll learn from your
21 experience.

22 MS. TREAT: Yeah. So the next thing, Part
23 D, everybody's big headache. You know, Vermont
24 is usually like just about the best of anybody on
25 this in terms of providing wrap-around. This is

1 not a cost to you, this is a cost to
2 expenditures. But I did want to mention that I'm
3 not entirely clear on whether or not you're doing
4 all of the things that you might want to be doing
5 around making sure that people access (inaudible)
6 Part D who need it and who are eligible for it.
7 And (inaudible) with a Maine program (inaudible)
8 this, that and the other, and I'm not sure that's
9 true. But I did want to mention that I think
10 they are doing a lot that would be worth looking
11 at if you are not doing it. And that includes,
12 you know, signing people up -- the state signing
13 people up for the subsidy and for (inaudible)
14 programs and specifically enrolling them in the
15 programs that are appropriate for them, as well
16 as helping them with their appeal if they're
17 denied medications or denied the subsidy. And so
18 I don't know.

19 ATTENDEE 1: I think we're being told we do.
20 There's people pointing to themselves and saying
21 that's what they do.

22 MS. TREAT: What's that?

23 ATTENDEE 1: There are people in the
24 audience saying that's what they do, so I think
25 that Vermont does do that. I know we have a

1 healthcare ombudsman that also -- that does that,
2 so . . .

3 MS. TREAT: Good. And also one other --
4 this is another one actually that I am personally
5 putting in, but at the request of our insurance
6 bureau and just -- it may be that I think there
7 may be other states that states want to be taking
8 a look at.

9 Part D, as you know, not all (inaudible) is
10 a private insurance product. There have been
11 problems with how that product is marketed and
12 just -- and, you know, whether or not you're
13 fully regulating everything you can do. And then
14 to put these questions here because there's lots
15 of writing and (inaudible) what states can and
16 can't do -- can't do.

17 But I've been able to put in a bill dealing
18 with entirely a growing practice in this state
19 which is that insurance agents use the Part D
20 marketing as an opportunity to market everything
21 else that they have like their life insurance.
22 And that includes cold calls to people as well as
23 (inaudible) somebody to sit down (inaudible) Part
24 D stuff.

25 And so our insurance bureau has asked that

1 we put in a bill (inaudible) the Unfair Trade
2 Practices Act and that may be something that you
3 would be interested in in the consumer protection
4 provision.

5 ATTENDEE 1: Okay. We will definitely check
6 with our insurance representatives on that one.

7 MS. TREAT: So --

8 ATTENDEE 1: If it's a practice in your
9 state, I'm quite sure it is in ours too.

10 MS. TREAT: Yeah.

11 ATTENDEE 1: That's -- otherwise
12 (inaudible). Okay.

13 MS. TREAT: So next on my list is purchasing
14 pools. I mentioned (inaudible) you are a member
15 of this. The only thing I would say here is -- I
16 mean, what I don't know is -- purchasing pools
17 are effective in dragging down prices in part
18 because you have a large group of (inaudible) and
19 in part because you have to balance if the drug
20 company's participating in a rebate situation.
21 Because you can, you know, say, well, you're not
22 -- we're not going to, you know, have your drug
23 (inaudible) there may be things that Vermont
24 could be doing that would make that more
25 effective in terms of how your preferred drug

1 list works. I just don't know.

2 And the other question would be whether
3 everybody -- all the different programs within
4 the state are benefitting from this negotiating
5 authority or not and -- you know, including
6 whoever's buying the medications for the state
7 employees, for the teachers, for the town, all of
8 that. So that's the only (inaudible). I know
9 that you're doing a lot already, maybe there's
10 not much more that you could be doing, but those
11 are two areas where, you know, perhaps there's
12 additional savings that are possible.

13 ATTENDEE 1: Okay.

14 MS. TREAT: Okay. Same thing with generic,
15 when we -- you know, I just didn't have time to
16 know everything you're doing about generic. So
17 again, there may be things that could be done
18 related to your preferred drug list and other
19 policies that you have that would encourage
20 generic use more than you are right now.

21 So I've listed a number of things that
22 (inaudible) there's lots of savings that can't be
23 seen in here. You know, a lot of these states
24 weren't doing much to start with, so by doing
25 more small changes in generic policy they've --

1 I don't know what that beeping is.

2 ATTENDEE 1: I don't know either. Sounds
3 like a --

4 (Static.)

5 MS. TREAT: -- changes in their policies,
6 but (inaudible) seniors with Florida they've
7 saved, you know, really some money. I just don't
8 know whether there's anything to review, but I
9 think that we look at that and particularly right
10 now with so many of the really big blockbuster
11 drugs that are prescribed a lot, going by the
12 patents, you know, that's -- some of them like
13 right away, that's something to pay attention to
14 to make sure you have policies that allow for and
15 encourage people to switch over to the generic
16 right away.

17 ATTENDEE 1: We've got another question.

18 ATTENDEE 6: Do we have a short list of
19 those biggies that are going off patent?

20 ATTENDEE 1: Can you get us a short list of
21 those biggies that are going off patent?

22 MS. TREAT: I can't off the top of my head.

23 ATTENDEE 1: Okay. No, I just --

24 MS. TREAT: But there are lists out there we
25 could (inaudible).

1 ATTENDEE 1: We will find them.

2 MS. TREAT: You could do that in that e-mail
3 I'm sending (inaudible) yeah, you can probably
4 just go to the Generic Drug Association's Web
5 site, but I could help you with that.

6 ATTENDEE 1: Okay.

7 MS. TREAT: Okay. So then my next category
8 is avoiding the middleman. This is always a good
9 policy, mind you. And again, I don't know
10 whether that's an issue with Vermont. I know
11 that some states purchasing -- purchase not
12 (inaudible) the middleman such as a PBM to do the
13 negotiating. So I guess that's good, but, you
14 know, you might want to consider having overall
15 PBM transparency (inaudible) legislation. Maine
16 has a law, (inaudible) has a law, there's laws in
17 South and North Dakota. We do believe that there
18 is cost savings out there.

19 Essentially by getting rid of the middleman
20 you're getting complete transparency around how
21 much money you're actually saving with any
22 rebates being passed through of those savings and
23 all of that. If you're not avoiding it, then you
24 can pass legislation that says here's how we deal
25 with PBM.

1 ATTENDEE 1: We have actually passed that
2 legislation twice but it hasn't made it past that
3 committee. I think it's -- and it hasn't made it
4 through the other bodies, it's just made it
5 through the Senate.

6 ATTENDEE 7: It passed it by 24 actually.

7 MS. TREAT: So, you know, I mentioned here,
8 I mean, just to be really clear about -- there's
9 a lot of things being said about Maine like all
10 the PBMs are leaving the state and all this, and
11 I just -- we have no evidence of that, but I get
12 these e-mails because, you know, Indiana just had
13 a hearing on what was said. I don't believe it's
14 true.

15 But the way the Maine law is set up is it's
16 really hard to know for sure what's going on
17 because the law is really about (inaudible)
18 contract law. There are some PBM regulatory laws
19 that are more about giving an insurance
20 commissioner authority to go in and get
21 information or to regulate PBM kind of like in
22 insurance companies. The Maine law and the D.C.
23 law and actually the North and South Dakota laws
24 also are more saying this is about what should be
25 in contract between PBMs and those parties which

1 that court. We don't know what's happening
2 there.

3 So there are very legal complicated
4 questions here that involve (inaudible) dealing
5 with the employer being health care. And there
6 (inaudible) issues at first impression illegally
7 and they go to a lot of questions on how far
8 states could go on some of this stuff. This is
9 one of the areas where that is certainly the
10 case. So that's my PBM discussion.

11 ATTENDEE 1: Okay.

12 MS. TREAT: On 340B, I know I appeared
13 before the finance committee last year and
14 mentioned a number of things that could be done
15 under the 340B pricing. (Inaudible) Public
16 Health Act. There's policies that -- there's a
17 couple different ways to look at that. One is to
18 expand the clinic in -- the ability of clinics
19 (inaudible) to provide pharmacy services
20 essentially, which we'd have as lower 340B
21 pricing, I believe, that you -- that's actually
22 something that you've had a report on and are
23 working on.

24 The other side of it is to see if there's
25 particularly high cost (inaudible), example which

1 would be health plans or states that contract
2 with them or employers, you know, the contract
3 has to have certain things. Well, the contract
4 is between those parties, it's not between the
5 parties and the state.

6 So the state has been gathering information
7 about whether everyone's complying with those
8 contracts or whether, you know, there's PBMs that
9 are leaving the state or anything like that, they
10 don't really know. So I would just put that as
11 (inaudible). We don't really know. But I will
12 say this, that the Maine law is good law, at
13 least in the First Circuit which is where Maine
14 is. This case was decided in (inaudible) terms.
15 I mean, it could not have been a decision that
16 would better put the state of Maine (inaudible)
17 law and the PBM industry was unsuccessful in
18 getting the Supreme Court to take the case and
19 review it and reverse it. Well, they didn't even
20 take the case.

21 In D.C., the law like Maine was initially
22 ruled unconstitutional. That court has been
23 asked to look at its decision in light of the
24 Maine law and has been sitting on it for quite
25 some time and we haven't had a decision out of

1 would be HIV medication, hemophilia (inaudible)
2 medication, drugs that are particularly expensive
3 that if you have someone going through a 340B
4 certified clinic, which could also be many
5 hospitals in many states, then they have access
6 to these lower costs. And also if the state is
7 paying the (inaudible) rate, they have access to
8 these costs, you know, just generally. So that's
9 the information that (inaudible) provided that to
10 the finance committee last year. There may be
11 some savings opportunities there.

12 And I noticed that there was a conference
13 coming up very soon sometime in February that
14 looks like it's going to go into vast detail on
15 this. There might be something that if you were
16 interested (inaudible) staff or someone from the
17 agency would be interested in going and listening
18 if there's anything else you could be doing.

19 ATTENDEE 1: Okay. Questions?

20 MS. TREAT: A study here called the claims
21 act on --
22 (Static.)

23 ATTENDEE 1: Okay.

24 MS. TREAT: Okay.

25 ATTENDEE 1: Okay.

1 MS. TREAT: So False Claims Act. What we're
2 talking about here is Medicaid and Medicare
3 products. You know, sometime when people think
4 about Medicaid fraud they think about an
5 individual patient going in and getting
6 (inaudible) that they are not allowed to have for
7 (inaudible) purposes. But it turns out that the
8 bigger issue is one that many states have been
9 involved in litigation against various healthcare
10 providers, the bigger issue is things going on
11 with those providers charging prices that are
12 over the price of the (inaudible) charge, for
13 example.

14 In the case of a pharmaceutical company,
15 many of these marketing and misleading
16 advertising cases have involved False Claim Act
17 cases. False Claim Act is something I'm
18 (inaudible) on the federal session books that's
19 actually passed back (inaudible) from Abraham
20 Lincoln to deal with fraud that was happening
21 during the Civil War. And it's kind of a weird
22 (inaudible) because it's like a whistle-blower in
23 that it protects the whistle-blower to report
24 things. It actually has a kind of weird secret
25 process for a little bit before the government

1 discussion is all the programs around importing
2 drugs from other countries, which you have
3 already done. It's -- it's (inaudible) you're --
4 with these programs, so I haven't really gotten
5 into any more detail on that. But I guess you
6 could certainly lump that in with the trade
7 discussion as well. So that's not really, you
8 know, a way to save money on the trade issues,
9 but it's something to be aware of so that you
10 don't lose money if you're told that you can't
11 have a preferred drug list or something like
12 that.

13 ATTENDEE 1: We're actually going to be back
14 on Friday here in (inaudible) and people on the
15 trade issues.

16 MS. TREAT: Right. So that is my
17 presentation.

18 ATTENDEE 1: Okay. Thank you very much. I
19 don't see any other questions. Very
20 comprehensive and I think it's a world that we
21 need to start looking at and we hope to be
22 talking to you in more detail once we've kind of
23 honed in (inaudible.)

24 SENATOR RACINE: Okay. This is Doug Racine,
25 Sharon, I'm the new chair of the Senate Health

1 decided we'd better not be one to jump into the
2 case, and especially brought by private persons.

3 The thing about this is that if you have a
4 law that looks a lot like the federal laws and
5 meets strict criteria, if you enter into one of
6 these case (inaudible) that has a settlement that
7 (inaudible) and I know if Vermont's been real
8 active in a lot of these cases, you will be
9 eligible for additional federal money when that
10 case is settled if you have a law that meets
11 their criteria. And most state laws deal with
12 the legal (inaudible) as such do not meet these
13 criteria.

14 So I wanted to mention this. This was
15 something you might want to do because since
16 you're bringing these cases anyway, you would be
17 eligible for more money as a result of
18 (inaudible) that came down. So that's something
19 you might want to look at.

20 Then finally I'm not going to talk about it
21 as much, I know that (inaudible) talked to
22 everybody about those, but trade issues actually
23 could have an effect on what you are able to do
24 or not able to do.

25 And what I sort of left out of this

1 and Welfare Committee and I just wanted to thank
2 you. This was, as Ann said, very comprehensive
3 and I think it gives us a number of areas that we
4 can pursue. This was sort of put on the back
5 burner the last couple of years because we've
6 been focussing on cap amount within our blueprint
7 for chronic care management. But we want to move
8 it to the front burner this year. So you gave us
9 a great start and I thank you for that.

10 MS. TREAT: Great. Thank you. I appreciate
11 it.

12 ATTENDEE 1: Okay. Thank you. Bye.

PROCEEDINGS

CD No: CD 2007 35

SPEAKER 1: -- at one time, and then I just got treated by another surgeon, and he says, you know, I am out of here.

MS. RICHTER: Was he a general surgeon?

SPEAKER 1: No, (inaudible) the second one, and general was the first one.

MS. RICHTER: Yeah, because general surgeons are sort of in the bind that we are in. They are being devalued and --

SPEAKER 1: We lost -- medicine lost a good man.

MS. RICHTER: And that's the problem, that's happening all the time. Retlin (phonetic) is having a severe problem.

SPEAKER 1: Yeah.

MS. RICHTER: Northeast Kingdom is having a severe shortage. So there are certain areas that are actually being affected more than others and really need not be. I mean this need not happen. I think this premature retirement can be stopped.

As far as, you know, getting and

Page 4

could not afford to come back and practice.

SPEAKER 1: They pay for your education.

MS. RICHTER: Yeah, I mean there is a rural initiative that is doing that, but we have not invested in that.

I mean I think that is certainly worthy, because what you find is that when you recruit from rural areas, rural people tend to stay rural, just like urban tend to stay urban, black tends to stay black.

I mean that's why minorities are recruited, because they tend to then practice in minority communities. Same thing in rural, and that would be certainly in our best interest to do that, but I think there is other things that we should try do in the meantime to keep docs from retiring early.

I am terribly worried about my own practice, where two of my partners are 63 years old, and they have had it up to their eyeballs, and most of the time -- you know, when they first started, they would have probably practiced until they were about 75. That's not going to happen. Within two or three years, they will retire, and we will not be able to replace them, because we

Page 3

recruiting docs to come here and practice here, I think we are sort on somewhat of a right track. The AHAC has an initiative of going -- where they are trying to encouraging students to practice in rural Vermont, and we actually just had one float in to our office that's going to do that. So that is actually promising. But when you have so many doctors that are now dissatisfied and thinking of retiring early, we are going to have a crisis in another five years, if you don't already consider it a crisis.

SPEAKER 3: I don't know if this is (inaudible) here, but I know in Maine -- Maine, over the years, actually a high school classmate of mine was married to a Physician's Assistant, and he then lived in rural Maine, and the communities that he was actually working in actually paid for his medical to go back to school to become a doctor, as long as he agreed to stay, and are we doing that here?

MS. CUMMINGS: I had a neighbor who wanted nothing more than to come back and be a pediatrician in Vermont, and she went to -- I think it is called -- she went to a school in Maine, and Maine made her such an offer that she

Page 5

will never be able to reimburse at the rate that other places around the country are.

SPEAKER 4: How much retirement, say, 60 on is in fear of liability?

MS. RICHTER: I am not sure. I don't know what the answer to that is.

SPEAKER 4: Because it would strike me as that is an added variable.

MS. RICHTER: It is. I mean it is an added -- if you consider the malpractice premiums and such, although they are not that tremendous for primary care, it is one of the issues, but most of the issues right now, the docs that I talked to, most of them, especially the ones that are disgruntled, who have been in practice for a while, it is because of the second guessing.

You know, they say it's that steady drip, drip, drip of asking me to provide documentation of something that I already did for the patient, and now you are taking time away from the patient so I can show you that I did this.

MALE ATTENDEE: So malpractice is another part of the (inaudible).

MS. RICHTER: Yeah, it is part of it, yeah.

MS. CUMMINGS: Where do they go?

Page 6

1 MS. RICHTER: Well, I will tell you, some of
2 them in here talked about one woman who is now in
3 law school. Some of them went to other places.
4 Some of them -- yeah, one said practice closed and
5 moved out of Vermont. Some went to other states
6 where they got paid more. One actually said that,
7 I have actually made that phone call, and I am
8 moving out of state where I will see a 70 percent
9 pay increase and substantial reduction in hours.
10 This is on page seven. I am retired from clinical
11 practice. This person was in the military.

12 People are, you know, either retiring
13 early and finding some other way to make a living
14 or just retiring.

15 MS. CUMMINGS: It's not the money?

16 MS. RICHTER: It's interesting, because there
17 are some docs that actually can't afford to
18 retire, can't afford to. They want to, but they
19 can't afford it.

20 So you have got sort of a disgruntled
21 group in that respect, too. One doc has been
22 practicing for 30 years and can't, you know --
23 actually, in the eastern part of the state, and
24 can't afford to retire, but wants to.

25 So, you know, if you add all these

Page 8

1 MS. RICHTER: Instead of hearing from just me,
2 I am one practicing doc in the state, you need to
3 really hear from docs in the trenches.

4 What we heard last year, there was maybe
5 testimony on -- I think on one day hearing from
6 six docs. I actually happened to be one of them,
7 but there wasn't enough input from people who are
8 in the trenches, and you need to hear from these
9 folks. It isn't just me. It isn't just a handful
10 of us. There is basically a major disaffection
11 with the ways things are going right now, so I
12 would say if we involve the docs that want to be
13 involved, we actually have 170 that responded with
14 personal information, contact information, to us
15 that wanted to be involved in the process.

16 I think we need hearings at the state
17 level to hear from these docs, to find out what
18 would make their lives easier, what could make
19 things better, and then we have to stop before we
20 add more work, which I would sort of single out
21 the Catamount disease management piece, the
22 blueprint for Health adds work to our load without
23 even assessing if there is enough hands to do the
24 work, and we need to stop that in its tracks and
25 reassess. Let's do things that help primary care,

Page 7

1 together and the fact that, you know, we really
2 probably need 20 or 30 more primary care docs in
3 the state, and that we may end up losing that
4 amount, we are going to have a tremendous problem
5 in a few years.

6 MS. CUMMINGS: I am watching the clock, and I
7 think I said before you came in some of us have --
8 one of us has been summoned to the Speaker's
9 office at 3:00.

10 MS. RICHTER: Oh, okay.

11 MS. CUMMINGS: I thought it was 2:00, but it
12 looks like we have got a 15-minute interval, so
13 Sandra Ayre will take over.

14 MS. RICHTER: All right.

15 MS. CUMMINGS: And I will -- yeah, I think we
16 are just going to --

17 SPEAKER 3: What happened to our break?

18 MS. CUMMINGS: We are not finished yet.

19 MS. RICHTER: Are you union or what?

20 (Inaudible.)

21 MS. CUMMINGS: Well, we have to be out by 6:00.

22 MS. RICHTER: I think in terms of
23 recommendations, though, in case you want to
24 know --

25 MS. CUMMINGS: Yes, I think --

Page 9

1 not hinder them.

2 MS. CUMMINGS: This community really isn't the
3 appropriate one to do that.

4 MS. RICHTER: I know that. I already talked to
5 Senate Health.

6 MS. CUMMINGS: It needs to be either Health or
7 probably the Healthcare Commission.

8 MS. RICHTER: The Commission, yeah.

9 MS. CUMMINGS: And I will be willing to do
10 everything I can to get that hearing. I assume it
11 will be an evening meeting.

12 MS. RICHTER: It would have to be.

13 MS. CUMMINGS: I think part of it is I hesitate
14 to ask doctors --

15 MS. RICHTER: I know.

16 MS. CUMMINGS: -- because they have a practice.

17 MS. RICHTER: Me too. I know. I mean that's
18 why we did this. We wanted to hear at least what
19 they had to say.

20 I mean the other thing we are going to do
21 is, we are going to assemble sort of a democratic
22 process for primary-care physicians to be able to
23 respond to various aspects along the way.

24 If you suddenly start discussing some
25 measure that you are going to implement, that we

1 then feed it back to them and say, what do you
 2 think of this, does this make sense to you, and if
 3 not, what would you recommend that we use to
 4 contain cost.
 5 MS. CUMMINGS: I think some just like to think
 6 the Medical Society does that for them. I think
 7 we are having some doubts.
 8 MS. RICHTER: Yes, I think they are not
 9 addressing primary care as much as they do the
 10 specialties.
 11 SPEAKER 3: I think the emergency room would be
 12 a plum assignment in today's era, because it's --
 13 MS. RICHTER: Yeah.
 14 SPEAKER 3: -- more organized by hours and it
 15 probably --
 16 MS. RICHTER: It's guaranteed pay. As far as
 17 the paperwork hassles, they are very minimal,
 18 except you have to write the chart for seeing the
 19 patient, yeah, that and locum tenens.
 20 A couple docs talked about locum tenens.
 21 Locum tenens are basically temporary placements.
 22 You go and work for a year, but you get a salary.
 23 You have no paperwork as far as any kind of
 24 administrative stuff, and it's much more
 25 satisfying for some of these docs, but that's not

1 the answer.
 2 SPEAKER 3: (Inaudible) travelling nurses.
 3 MS. RICHTER: Yeah, but it is not the answer,
 4 you know.
 5 SPEAKER 1: How would you get a random sample
 6 of the primary cares so that you get maybe a happy
 7 doctor out there?
 8 MS. RICHTER: Well, there probably are some
 9 happy doctors. I mean we only heard from -- we're
 10 assuming we only heard from about half of the
 11 docs. I am either assuming the other half are
 12 happy or --
 13 SPEAKER 3: No time.
 14 MS. RICHTER: Or whatever, yeah.
 15 Some of them -- actually, we even after
 16 the deadline for this, we started getting -- we
 17 continued to get about a dozen more that came
 18 filtering in.
 19 But I am sure there are some happy docs
 20 out there. I don't happen to know very many of
 21 them, but I am sure there are. You know, I think
 22 most of us are happy with what we do. What we
 23 don't want is the baloney that does nothing for
 24 the patient and does nothing to contain cost that
 25 is being imposed on us, because people are trying

1 to contain cost and think that this will do it.
 2 The other thing is when you see the
 3 insurance companies who send these different
 4 correspondence, it saves them money, but it
 5 doesn't save us money, and it doesn't save the
 6 system money.
 7 SPEAKER 3: Puts it on you.
 8 MS. RICHTER: Pardon me?
 9 SPEAKER 3: Puts it on you.
 10 MS. RICHTER: Yeah. So I mean, each of
 11 these -- this is a different formulary for each --
 12 I actually just took two of them. This is for MVP
 13 and this is for Medicaid. They are all different.
 14 So if you want a (inaudible) hypertensive, it may
 15 be covered on MVP. It is not covered under
 16 Medicaid, etcetera.
 17 So every time I get in the habit of
 18 prescribing a sort of class of drugs, I may or may
 19 not be able to and have to sit down and look it
 20 up, or sometimes you have to call them and find
 21 out what they cover and what they don't. Everyone
 22 is different.
 23 SPEAKER 3: That's the problem of first
 24 (inaudible).
 25 MS. RICHTER: Yes.

1 But we also have the disease management,
 2 you know, that are calling our patients and
 3 sending them letters, like this patient ended up
 4 being accused of having congestive heart failure,
 5 and was told to go to a Web site and that he would
 6 learn how to manage -- he could learn how to
 7 manage his congestive heart failure. And he
 8 actually called me after a month, and it turns out
 9 that he didn't have congestive heart failure, so
 10 he spent his entire Christmas being frightened,
 11 depressed, trying not to dwell on my prospects, as
 12 my wife emphatically stressed lastly, I should
 13 have confided in her in this immediately, but I
 14 couldn't face this over the holidays, so I tried
 15 to swallow it.
 16 Maybe it's the guy thing about being a
 17 stable provider and protector. Now the terror is
 18 subsiding, and I am really angry about being
 19 subjected to this. My kids were home from
 20 college, and this was Christmastime.
 21 So that's not the only one. I mean I have
 22 had people accused of having depression or one
 23 patient diabetes that she didn't have, called me
 24 hysterically.
 25 The problem is that they are overseeing --

1 they are going aside from what the doctor is
 2 recommending, and they are not necessarily --
 3 MS. CUMMINGS: These are by the insurance
 4 companies?
 5 MS. RICHTER: Yeah.
 6 MS. CUMMINGS: Oh.
 7 SPEAKER 3: Oh, yeah.
 8 MS. RICHTER: They are calling patients without
 9 asking the doctor, and this one was an insurance
 10 company, and I actually have the Web page that
 11 this gentleman was in. It says, Hello, Mr. Jones.
 12 It time to manage your congestive heart failure.
 13 He was -- he was mortified.
 14 SPEAKER 5: They respond to gestures? I don't
 15 think so.
 16 MS. RICHTER: Isn't that awful?
 17 SPEAKER 5: (Inaudible.)
 18 MS. RICHTER: Oh, yes. I mean this -- the
 19 reason that this can happen is for some reason you
 20 went into your doctor one time with a cough,
 21 they -- the claims -- they use claims data, and
 22 the insurance company may see that as you have
 23 pulmonary hypertension, because people with
 24 pulmonary hypertension have coughs. So they will
 25 pull in all those people that had a cough, and

1 they send you a letter saying that you are at a
 2 higher risk and you need to get a flu shot,
 3 because you have pulmonary hypertension, scaring
 4 you to death.
 5 And that -- there are -- I have numerous
 6 examples. I am just one doc.
 7 MALE ATTENDEE: Do they extrapolate from the
 8 pharmaceuticals they are taking?
 9 MS. RICHTER: As far as -- you mean as far as
 10 what your disease might be?
 11 MALE ATTENDEE: Yeah.
 12 MS. RICHTER: Sometimes, yeah.
 13 MALE ATTENDEE: In other words, there are drugs
 14 to be taken for hypertension, specifically heart
 15 medications.
 16 MS. RICHTER: Right.
 17 MALE ATTENDEE: So there are people taking
 18 them --
 19 MS. RICHTER: Absolutely.
 20 MALE ATTENDEE: -- who don't have heart
 21 conditions?
 22 MS. RICHTER: Right. Absolutely. That
 23 happened with one of my patients who was not a
 24 diabetic, and I put her on a drug used for
 25 polycystic ovary syndrome and diabetes, and they

1 said, well, she must be diabetic, wrote her a
 2 letter, scared her half to death, told her she
 3 could go blind, her kidneys could fail, her feet
 4 could fall off.
 5 You know, it is really unnecessary, and it
 6 is not helping the care. If it was, we could
 7 probably put up with it, but it is not. And it is
 8 adding to the burden, and it really needs to stop.
 9 And I would urge any of you if you have any
 10 connection with the Catamount, that we stop that
 11 process and take a look it, and how we can make
 12 this a positive thing instead of a negative thing.
 13 I mean the disease management and the
 14 chronic care model could be good if you integrate
 15 some of these measures into primary care.
 16 So, anyway, any other questions?
 17 MS. CUMMINGS: Thank you very much.
 18 MS. RICHTER: Okay.
 19 MS. CUMMINGS: Committee, we have Linda
 20 McIntire.
 21 Committee, we have a break until our next
 22 witness at 3:15. Can you be back at 3:15?
 23 Be back in 11 minutes.
 24 (Thereupon a break was taken.)
 25 MS. CUMMINGS: To resume, are you all set,

1 Linda?
 2 MS. McINTIRE: Thank you very much.
 3 I am Linda McIntire, Commissioner of the
 4 Department of Human Resources. And I understand
 5 that you have some questions about the PDL that we
 6 have for our formulary and our healthcare plan.
 7 Our prescription drug benefit is the
 8 biggest part of our health plan, which is
 9 something that we negotiated with the union, and
 10 the present formulary was actually negotiated
 11 before I became commissioner. Actually, the
 12 contract was signed the day that I accepted this
 13 job March 4, 19 -- 2005.
 14 So I would think it would be beneficial
 15 for the committee to hear from my Director of
 16 Benefits, Kathy Callahan, and she is with me, and
 17 Harold Schwartz, the Director of Fiscal
 18 Information Management for my department. The two
 19 of them really were involved with the negotiations
 20 with the union, and they know the formulary inside
 21 and out. So I think it would be really more
 22 appropriate to turn the chair over to the two of
 23 them, and I think they can provide the answers
 24 that you are looking for. Okay.
 25 MS. CUMMINGS: Thank you.

Page 18

1 MS. McINTIRE: Do you want to sit here
2 together?
3 MS. CALLAHAN: I could probably manage it.
4 Hi, everybody. Kathy Callahan. Nice to
5 see you.
6 I may be calling to Harold on the
7 sidelines, but right now --
8 Under --
9 SPEAKER 6: He is used to that.
10 MS. CALLAHAN: I have some copies here --
11 Yes, there are some committees that if
12 Harold says it's okay, it's okay. So I don't know
13 about (inaudible).
14 SPEAKER 6: If the girl thinks it's okay, Linda
15 thinks it's okay.
16 MS. CALLAHAN: Yeah, well, she made some
17 improvements.
18 Thank you for inviting me here today, and
19 the request was testimony on the State's preferred
20 drug list, how is it working, can you quantify any
21 savings, anything else you think the committee
22 should know about the prescription drug plan and
23 any other information you would like to share.
24 So I thought it might be useful if I gave
25 you a quick overview of the plan as it stands now,

Page 19

1 and a little bit of history of what it used to
2 look like and what it does look like.
3 Presently we have 22,400 plan members, and
4 this includes the state employees and retirees,
5 and their covered dependents.
6 For the year 2006, plan members filed
7 33,637 -- that's a typo. I apologize. 333,637.
8 We goofed, in case you had the other two numbers.
9 And the total cost of our drug spends for 2006 was
10 21.1 million.
11 Now, of that total number of
12 prescriptions, 140,225 were for brand name drugs,
13 and those cost 16 million. And the remaining
14 193,232 prescriptions were for generic drugs, and
15 the cost of those was 5.1 million.
16 So I think you can see that generics are a
17 lot more cost effective, and they represent about
18 58 percent of our drug spend, which is pretty
19 good.
20 Some of you may know that we use a
21 pharmacy benefits manager named Express Scripts,
22 and through Express Scripts the plan provides
23 prescription drug coverage through both retail
24 pharmacies and mail-order home delivery.
25 Retail pharmacies in Vermont are

Page 20

1 nationally contracted with Express Scripts for
2 retail prescriptions, and then Express Scripts
3 provides mail-service prescriptions through its
4 own dispensaries around the country.
5 On our behalf, Express Scripts obtains and
6 passes along manufacturer pharmaceutical
7 discounts. They don't pass all of the discount
8 along, but they pass some of the discount along,
9 based on the size of our plan and our market
10 share, and these discounts are based on a drug's
11 average wholesale price, otherwise known as AWP.
12 The discounts vary between their retail
13 network and their mail-order pharmacy, and the
14 mail order discounts are generally the deeper
15 discounts.
16 The plan's current contract with Express
17 Scripts guarantees the following discount levels:
18 At retail, brand name drugs are average wholesale
19 price minus 16 percent, and there is a \$1.20
20 dispensing fee. And generic drugs are average
21 wholesale price minus 51.5 percent, plus a \$1.20
22 dispensing fee. And through mail service, brand
23 drugs are AWP minus 24 percent, and generic drugs
24 are AWP minus 54.5 percent, and there are no
25 dispensing fees at mail order.

Page 21

1 Plan members may obtain short-term drugs
2 or 30-day fills through retail. Long-term
3 maintenance fills, these are generally 90-day
4 supplies, are available either through retail
5 pharmacy or the mail service home delivery,
6 whichever one an employee chooses.
7 MS. CUMMINGS: Your plan does not -- I'm sorry.
8 SPEAKER 7: No, go ahead, you are the chair.
9 MS. CUMMINGS: -- doesn't make it so our local
10 pharmacists have to defer to some mail order
11 person in Illinois?
12 MS. CALLAHAN: That's correct, they don't. You
13 can do it either way you want.
14 SPEAKER 7: I guess my question is the follow
15 up of that, that is, if you choose the retail
16 typically -- I mean I don't know how this plan
17 works, the plan that I happen to belong says it
18 is -- if I order a maintenance drug through the
19 mail order, I get -- I get the equivalent of two
20 months of co-pay.
21 MS. CALLAHAN: Yeah.
22 SPEAKER 7: And it's either way for whether
23 it's retail or not, the co-pay is basically the
24 same?
25 MS. CALLAHAN: One co-pay. It is one co-pay.

Page 22

1 SPEAKER 7: It is the same co-pay?
 2 MS. CALLAHAN: It is the same co-pay.
 3 SPEAKER 7: Yes.
 4 MS. CALLAHAN: Yes. So there is no
 5 disadvantage. Members aren't disadvantaged if
 6 they go to retail. They will generally pay more,
 7 though, because the discounts are greater at mail
 8 order.
 9 SPEAKER 8: We have a percentage co-pay, so
 10 they are paying the same percentage, so if it is
 11 10 percent, they are paying 10 percent of the
 12 cost.
 13 SPEAKER 7: Oh, okay, so the co-pay --
 14 SPEAKER 8: 10 percent of the smaller number.
 15 MS. CALLAHAN: Is a percentage.
 16 SPEAKER 7: Under, okay. So it is not a co-pay
 17 of \$5, \$10, \$20.
 18 SPEAKER 8: It is a percentage co-pay.
 19 SPEAKER 7: It is a percent co-pay?
 20 SPEAKER 8: Yeah.
 21 MS. CALLAHAN: Yeah.
 22 SPEAKER 7: And it is a percent of the --
 23 MS. CALLAHAN: Cost.
 24 SPEAKER 7: -- the final cost --
 25 MS. CALLAHAN: Right.

Page 23

1 SPEAKER 7: Okay.
 2 MS. CALLAHAN: And that really goes to my next
 3 point, that for longer-term maintenance medicine,
 4 it is more cost effective to both the plan and the
 5 members if they use the mail service delivery.
 6 The impact of the January 1, '06 change to
 7 a PDL or a preferred drug list plan, prior to
 8 that, prior to 1/1/06, because employee benefits
 9 are a mandatory subject of collective bargaining
 10 between the state and its union, the state does
 11 not have the unilateral right to just change the
 12 plan. So we did bargain with the union in 2005,
 13 and the parties agreed to change the structure of
 14 the prescription plan and to use a PDL for the
 15 first time, and that went into affect January 1st
 16 of 2006.
 17 The plan designed prior to the PDL in 2006
 18 was that there was a \$25 annual deductible. The
 19 plan paid 80 percent, and the members paid
 20 20 percent, and that was for any prescription
 21 drug. There was a low member annual out-of-pocket
 22 cost of \$300. That means that the plan paid 100
 23 percent after that \$300 in drug costs.
 The changes that we made in January 1st of
 2006, we implemented a preferred drug list on a

Page 24

1 three-tier formulary basis. The \$25 annual
 2 deductible remained in place, and the cost shares
 3 under the plan changed, and it changed from the
 4 state paying 80 percent and the member 20 for any
 5 drug to the state paying 90 percent and the member
 6 10 percent for generics. The state retained its
 7 80 percent cost share, and the member the
 8 20 percent cost share on preferred brands, and
 9 then for non-preferred brand drugs, the state paid
 10 60 percent, and the member pays 40 percent. And
 11 in addition, the member out-of-pocket maximum was
 12 increased slightly to \$475.
 13 So why is a formulary plan important, and
 14 what were the changes that occurred? Generally, a
 15 formulary plan incites (phonetic) members
 16 purchasing decisions, which we have seen going on
 17 in our experience. It drives market share to the
 18 preferred brand, and it incites members to use
 19 generics where available.
 20 The 2006 savings based on our change to
 21 the PDL plan were 2.8 million based on an overall
 22 drug spend of 21.1 million.
 23 The plan's 2006 drug spend would have been
 24 2.8 million higher if we had not changed to a PDL
 25 plan. The savings came primarily from a higher

Page 25

1 generic fill rate. And based on the new PDL plan,
 2 more members chose the lower cost generic drugs at
 3 a low 10 percent co-pay, which is kind of a
 4 win-win for everybody. I know mine -- when -- you
 5 know, when I go for a 30-day fill, my
 6 out-of-pocket is 58 cents or something, which is
 7 almost unheard of, because of the cost of the
 8 generic is low, and my 10 percent is pretty small.
 9 MS. CUMMINGS: Okay. So we did save some
 10 money.
 11 MS. CALLAHAN: We did. It's money not spent,
 12 money --
 13 SPEAKER 7: Can you join the life of the
 14 contract? Typically, it is a two-year contract;
 15 is that not right?
 16 MS. CALLAHAN: It is -- no, it is a two-year
 17 contract, with a possible two more years
 18 extension.
 19 SPEAKER 7: Okay. I am talking about the
 20 overall contract with state employees.
 21 MS. CALLAHAN: Oh.
 22 SPEAKER 7: State employees.
 23 MS. CALLAHAN: The labor agreement.
 24 SPEAKER 7: The labor agreement is a two-year
 25 contract?

Page 26

1 MS. CALLAHAN: Right.
 2 SPEAKER 7: Is the PDL -- I don't know how to
 3 say this? Is this part of the contract, the PDL?
 4 I mean what drugs --
 5 SPEAKER 8: Does it coincide with it?
 6 SPEAKER 7: Yeah.
 7 Does it coincide with that two-year
 8 window? In other words, you have two-year labor
 9 contracts. Is the PDL, a two-year PDL?
 10 MS. CALLAHAN: No. The change to the PDL was
 11 permanent, and it was negotiated in the last
 12 contract.
 13 SPEAKER 7: All right.
 14 MS. CALLAHAN: And the state and the VSCA have
 15 agreed to get together and talk about changes
 16 within PDL.
 17 SPEAKER 7: How does that happen? That's my
 18 question. How does changes within the PDL happen?
 19 MS. CALLAHAN: Okay.
 20 SPEAKER 7: Is it unilateral? Does the state
 21 say this is it, or is there --
 22 MS. CALLAHAN: No. We have something called a
 23 benefits advisory committee, and the state and
 24 VSCA get together and talk about -- at least
 25 quarterly, and talk about anything related to the

Page 27

1 benefit plans. And we have language in the labor
 2 agreement that said that we will discuss the PDL
 3 at least once a year. And Express Scripts then
 4 comes forward with their proposed PDL changes, and
 5 they only do this once a year essentially. So the
 6 formulary is not changing every quarter or every
 7 month or anything like that.
 8 If a drug goes off patent, it will be a
 9 generic at the time that that occurs in mid year,
 10 and that is all to the good of the member. But if
 11 there are going to be any drugs that come on or go
 12 off the PDL, that's an annual thing.
 13 SPEAKER 7: But you are not bound to the labor
 14 contract in order to switch the drug benefit
 15 around?
 16 MS. CUMMINGS: You could take things on and
 17 off. That's not written in the labor contract.
 18 MS. CALLAHAN: That's correct.
 19 SPEAKER 7: But that has to be in conjunction
 20 with the union, right?
 21 MS. CALLAHAN: Yes, it does.
 22 SPEAKER 7: In other words, both sides have to
 23 agree to that?
 24 MS. CALLAHAN: We do, and we work pretty
 25 closely together on that.

Page 28

1 SPEAKER 7: How does -- how does -- how do you
 2 decide something that might come off of the PDL
 3 and become a non-preferred versus preferred or
 4 vice versa?
 5 MS. CALLAHAN: Well, we take the counsel of the
 6 PBM, not to throw too many acronyms around.
 7 Express Scripts --
 8 MS. CUMMINGS: Pharmacy benefit --
 9 MS. CALLAHAN: -- benefit manager --
 10 MS. CUMMINGS: -- we are going to do a lot of
 11 work on PBMs.
 12 MS. CALLAHAN: Yeah. And they have what they
 13 call a pharmacy and therapeutic committee. They
 14 study the drugs coming into the Pipeline, and they
 15 determine which ones are medically advantageous
 16 and which ones cost a lot. And their first cut is
 17 medical necessity or medical efficacy.
 18 SPEAKER 7: Who sits on that board?
 19 MS. CALLAHAN: That is a board of physicians
 20 and pharmacists from all over the country. It is
 21 a private, independent board.
 22 SPEAKER 7: I just want to be sure it's not
 23 insurance guys --
 24 MS. CALLAHAN: No, it is not.
 25 SPEAKER 7: -- making those decision.

Page 29

1 MS. CALLAHAN: No, it is not. They don't work
 2 for ESI at all, which is a good thing.
 3 Yeah, it is a private, independent group
 4 of doctors and pharmacists who are brought in and
 5 do their thing under cover of night -- as we all
 6 joke -- and then fade away. But truly speaking,
 7 they are an independent group, and they make this
 8 recommendation.
 9 Now, they send us the recommendation. We
 10 talk about which drugs -- this year not more than
 11 a handful of drugs were added or subtracted. You
 12 know, when you think of all the drugs on a
 13 formulary list, there aren't many that change.
 14 MS. CUMMINGS: How much transparency do we have
 15 with the PBM? Do we know if they are going to put
 16 something on or off, if they are getting paid for
 17 market share for that particular -- those are
 18 stories we have heard about pharmacy benefit
 19 managers, that they get a bonus if they increase
 20 the market share for a certain pharmaceutical. Do
 21 we know if that's going on, or is this just
 22 again --
 23 MS. CALLAHAN: I don't --
 24 MS. CUMMINGS: -- you get a percentage of the
 25 average wholesale price discount -- I think that's

Page 30

1 what went on there, a discount from the average
2 wholesale price.

3 MS. CALLAHAN: Yeah.

4 You know, it's hard to use the word
5 transparency and PBM in the same sentence.

6 MS. CUMMINGS: We are finding that.

7 MS. CALLAHAN: Because I think it might take,
8 you know, the CIA to ferret out true drug pricing.

9

10 SPEAKER 7: I don't even think they could.

11 MS. CALLAHAN: The answer is --

12 MS. CUMMINGS: This is worse than the CLA. I
13 am still trying to figure that out.

14 MS. CALLAHAN: It is not all that transparent,
15 but a lot of common sense goes into it too from
16 our prospective. We question their thought
17 processes and their choices and their
18 recommendations. We don't just say okay.

19 MS. CUMMINGS: Okay, that's --

20 MS. CALLAHAN: Okay.

21 SPEAKER 7: Madam Chair, I think it would be
22 equal as a group if we could, for instance, maybe
23 see what the current PBM is and what the PBL is --
24 what the proposed PBL is, just so we can kind -- I
25 mean, I happen to know -- I worked for a

Page 32

1 interest come into play?

2 MS. CALLAHAN: Well, it is important to know
3 that on a preferred drug list, there are always
4 choices. It's never the one -- that there is only
5 one choice of a drug in a category. There are
6 generic choices. There are brand choices, and
7 there is at least one brand choice in every
8 therapeutic group and two in many.

9 So we have -- let me back up and say that
10 we have what is called an open formulary or a
11 broad formulary. There are three kinds of
12 formularies, and we have the one that's the most
13 broad. Some are much more narrow, and they are
14 really more restrictive. They are designed to
15 have people pick just whatever there is, but we
16 have a lot of choice in ours.

17 MR. SCHWARTZ: There is a couple of protections
18 for the patient employees. One of the protections
19 is: If the person cannot take a particular drug
20 that's -- that is a preferred drug, and they have
21 to take the non-preferred drug, the one where the
22 co-pay is 40 percent, if there is a clinical
23 reason for it, not just the doctor says I like
24 that drug, yeah, there is on opt-out, so they
25 would end up -- the doctor provides some

Page 31

1 pharmaceutical company years ago, and I happen to
2 know a little bit about these things, and I worked
3 for a wholesaler as well at one time. And I would
4 be curious from my standpoint so I can understand
5 better, you know, what's going on. I mean, I
6 don't know what some of the companion drugs are
7 from different companies. You know, Merck had
8 one, Pfizer had one, the same -- they treat the
9 same thing. And one may be on this year, and all
10 of a sudden, there is a push by the PBM to take
11 that one off and put --

12 MS. CUMMINGS: Yeah, that's --

13 SPEAKER 7: That's what you were saying.

14 MS. CUMMINGS: But that's our negotiating
15 thing.

16 SPEAKER 7: Right.

17 MS. CUMMINGS: Is that if you give us a lower
18 price, you will be on our list and we will deliver
19 to you at X market share.

20 MS. CALLAHAN: We don't get hurt by their
21 decisions actually, if you want to think of it
22 that way, because they are making decisions in
23 their own financial best interest, and that
24 interest is passed on to us.

25 SPEAKER 7: But when does the patient's best

Page 33

1 information to the PBM, and they would pay a lower
2 percentage co-pay on it.

3 The other --

4 MS. CALLAHAN: An override.

5 MR. SCHWARTZ: The other sort of safety net for
6 the individual is there is a maximum amount out of
7 pocket, so they wouldn't pay more than a certain
8 amount of money. So their decisions -- you know,
9 there is a certain tunnel of decisions that they
10 can make, but at a certain point in time, they are
11 not going to pay any more than X amount.

12 MS. CALLAHAN: I think it is important what
13 Harold brought up, being able to take drugs and
14 get a medical override. And that was part of what
15 we negotiated with the union when we put this
16 thing in.

17 MS. CUMMINGS: Okay. So we have got an
18 override, and we are still saving significant
19 money.

20 MS. CALLAHAN: Yeah.

21 MS. CUMMINGS: And I am not going to get into
22 drug formularies. The Health Committee does that.

23 We don't do pills (inaudible), you know,
24 in efficacy and all the recognized (inaudible), we
25 are really kind of looking at the money.

Page 34

1 So any other questions from the committee?
 2 Okay. Thank you. That told us what we
 3 asked.
 4 MS. CALLAHAN: Great, thank you.
 5 MS. CUMMINGS: Committee you've got ten
 6 minutes. I am going to give you -- I assume you
 7 didn't get any break while I was gone.
 8 MALE ATTENDEE: No, we didn't.
 9 MS. CUMMINGS: You get another ten minutes,
 10 because Julie is not here yet.
 11 (Thereupon, a break was taken.)
 12 MS. CUMMINGS: Thank you. We can't do this too
 13 well. Rachel will be sorely depressed that we
 14 survived without her.
 15 MALE ATTENDEE: We went through two breaks.
 16 MS. CUMMINGS: We went through two breaks,
 17 that's what happens when Rachel is gone, we get
 18 two breaks.
 19 MS. BRILL: Good afternoon. My name is Julie
 20 Brill. I am from the Attorney General's office,
 21 and I specialize in consumer protection and
 22 anti-trust, among other things, and
 23 pharmaceuticals is one of the areas I spend a lot
 24 of time working on.
 25 I would just like to take a minute to

Page 35

1 introduce Anna Lav (phonetic) to you. Anna is a
 2 MPH candidate down at Dartmouth, and he mastered
 3 in public health. And he is doing an internship
 4 with me this semester. And he has got great
 5 credentials and has been incredibly helpful. He
 6 formally worked with Consumer Reports' version of
 7 health watch or health report, so he has got a
 8 great background for this kind of work. And so I
 9 am very pleased that he is here. And he has been
 10 sitting here this afternoon, so I just thought I
 11 would let you know who he was.
 12 MS. CUMMINGS: That's helpful, because we -- up
 13 to a few minutes ago, we were really crowded. And
 14 I -- we just assumed that some people -- never
 15 sure the people come or if they just -- we had --
 16 I saw, by the name tags, I gather the L&As were
 17 here today. There were a couple of L&As in, and
 18 so it's been a --
 19 MS. BRILL: Interesting, and I am sure they
 20 came here just to hear what you guys had to talk
 21 about.
 22 I thought I would talk about the five
 23 things that our office has been responsible for in
 24 terms of doing the pharmaceuticals. I wasn't
 25 talking about enforcement matters.

Page 36

1 You heard the Attorney General last week
 2 talk about the kind of cases we bring under our
 3 general consumer protection jurisdiction, for
 4 instance, the Betty Call (phonetic) case that you
 5 were just mentioning. We had a large Neurontin
 6 settlement. We had -- this year will be another
 7 banner year, I think. I think in 2007 we will
 8 have a large number of settlements again this
 9 year.
 10 But instead, I thought I would focus on
 11 the programs that we administer that deal with
 12 pharmaceuticals you all have basically given to us
 13 to deal with.
 14 One is the gift disclosure law, which is a
 15 law that requires pharmaceutical marketers,
 16 basically the manufacturers, to report to us about
 17 payments that they make to prescribers, and we do
 18 a report on that issue.
 19 The second is the price disclosure law,
 20 and I will explain that all to you in a minute.
 21 MALE ATTENDEE: What's the first one?
 22 MS. BRILL: We call it gift disclosure.
 23 Unfortunately, these two laws have very similar
 24 names, so -- it's called the gift -- colloquially,
 25 it is called the gift disclosure law, but it

Page 37

1 refers to any payment, like a consulting fee,
 2 travel, any meals, anything like that.
 3 The second one is a price disclosure law,
 4 and they are different. And I will explain those
 5 in just in one second. And then we have been
 6 doing things related to retail prices, and you all
 7 passed a law related to retail prices, and then we
 8 are working on a Web site related to that. So I
 9 wanted to let you all know about that.
 10 I thought I would give some information
 11 about the counter detailing that we did fund at
 12 UVM and Dartmouth through the Neurontin Grant
 13 Program. Bill Strull (phonetic) mentioned that
 14 when he was here, so I thought I would give you a
 15 little more information on that.
 16 And finally, I thought I would talk about
 17 the 2005 report that we did, which I have enough
 18 copies for you all, and I can hand that out.
 19 I think you might find this interesting.
 20 It has got some very interesting topics in it, and
 21 we are doing an update on this now, so we can talk
 22 about that.
 23 So those are the areas I thought I would
 24 cover briefly today. I know it's the end of the
 25 day, and you guys are probably exhausted, so I

Page 38

1 will try to go quickly, unless I go too quickly.
 2 MS. CUMMINGS: The protam (phonetic) has told
 3 us to plan on midnight, so --
 4 MS. BRILL: Midnight today?
 5 MS. CUMMINGS: Midnight every day, so --
 6 MS. BRILL: Oh.
 7 MS. CUMMINGS: So we are wearing the calluses
 8 up here gradually.
 9 MS. BRILL: I certainly will not work you until
 10 midnight.
 11 MS. CUMMINGS: I have to work my other job at
 12 6:00 o'clock.
 13 MS. BRILL: Don't worry. We will be out of
 14 here well before then.
 15 Okay. So let's talk first about the gift
 16 disclosure law.
 17 What you all decided several years ago,
 18 probably in around the 2002 time frame, was that
 19 you wanted to know and you wanted to have reported
 20 to the public gifts that were made by
 21 manufacturers to prescribers, because you wanted
 22 to find out what was influencing prescribing
 23 decisions and whether these gifts were out there
 24 as one of the mechanisms for influencing
 25 prescriber decisions.

Page 39

1 So prescribers are required to report
 2 to -- I am sorry, not prescribers -- the
 3 manufacturers and marketers are required to file a
 4 report with our office every year.
 5 And it's actually a very detailed report,
 6 and it's all computerized now. And we get
 7 probably 10,000 or more pieces of information
 8 about various gifts and payments to various
 9 prescribers in the state.
 10 We pull that information together and we
 11 put out the report. And we have now done three
 12 reports, and we have discovered that, you know, on
 13 average, Vermonters are receiving on the order of
 14 one to \$3 million. Vermont prescribers are
 15 receiving one to \$3 million per year in terms of
 16 reportable payments.
 17 There are exceptions that do not have to
 18 be reported, payments under \$25, discounts and
 19 rebates. We actually had a debate in the
 20 legislature about whether those should be recorded
 21 or not. You all decided they should not be
 22 recorded. Certain types of CMEs do not have to be
 23 recorded, things like that.
 24 FEMALE ATTENDEE: What are CMEs?
 25 MS. BRILL: Sorry, Continuing Medical

Page 40

1 Education.
 2 FEMALE ATTENDEE: Oh, education.
 3 Sample drugs, right?
 4 MS. BRILL: Sample drugs do not have to be
 5 reported, that's right, that's right.
 6 Although, there is an intellectual debate
 7 about whether that influences prescribing
 8 decisions.
 9 As you can imagine, if a doctor has a
 10 bunch of samples, you know, will the doctor more
 11 likely prescribe that for a consumer who may or
 12 may not be able to pay? But that is not part of
 13 our report. Consulting fees are, and that's a big
 14 area that we deal with.
 15 So I thought what I would hand out, this
 16 is the guide that we give to manufacturers of what
 17 they have to report to us. Just sort of describes
 18 generally our view of the law.
 19 And this is the last report that we did.
 20 This is the 2006 report. All of this
 21 information -- I have got plenty for the people
 22 that are here, but all this information is
 23 available on the Web. (Inaudible) report.
 24 Frankly, we would like to -- I will give it to
 25 you.

Page 41

1 MS. CUMMINGS: That's another report?
 2 MS. BRILL: These are two different documents.
 3 Frankly, we think that this database that
 4 we have is an extremely rich database, and has a
 5 lot of great information in it. And we would like
 6 to start doing more with it, but we are a little
 7 bit hampered in terms of the amount of data that
 8 we can match up with this data. So we want to
 9 work with folks over at OVA to get more data to
 10 help us enrich this report, and we are going to be
 11 working on that this year.
 12 MS. CUMMINGS: I was wondering. You collected
 13 all this information. Is it telling us anything?
 14 MS. BRILL: Well, it does -- it tells us some
 15 things, but I think it could tell us a lot more.
 16 In other words, right now what it tells us
 17 is, you know, the total amount of payments that
 18 are made, which in FY05 was \$2.17 million. And we
 19 can see the rates at which these payments are
 20 changing, which is interesting. But what I would
 21 like to see is looking in specific categories of
 22 drugs, whether individuals who receive these
 23 payments are influenced in terms of the rate at
 24 which they prescribe certain drugs versus other
 25 drugs. I think that would be a much richer --

1 MS. CUMMINGS: I think that sounds like a Ph.D.
2 thesis.

3 MS. BRILL: Well, we actually talked about the
4 type of person that we would need to help us
5 analyze the data, because OVA does have a
6 tremendous amount of data, but I do -- I do think
7 that would make this a really rich report, and
8 frankly, I think it would be helpful for you to
9 know whether, for instance, who are prescribing
10 for Medicaid patients, are some doctors
11 prescribing certain drugs, maybe more expensive
12 drugs, and they also happen to be doctors who are
13 receiving consulting fees, things like that. I
14 think it would be a very helpful thing to know.

15 So we would like to enrich this report.
16 It will take a lot more work on our part, and it
17 will take cooperation from OVA, and I am sure we
18 will get it. We just need to get their attention
19 on the issue. But in the meantime, it is a very
20 rich database.

21 You all, at our request, allowed
22 manufacturers to declare that certain payments
23 would be trade secrets, and the reason we asked
24 you to do that is so we wouldn't be subject to a
25 constitutional challenge on this law. And in

1 situation where the manufacturers could enjoin
2 this law, basically stop it from functioning at
3 all, because they would have said it was taking
4 their intellectual property, their (inaudible)
5 property in terms of their marketing plans.

6 MS. CUMMINGS: That was the same argument we
7 had with transparency and PBM.

8 MS. BRILL: It's similar, yes, similar,
9 similar.

10 So we actually asked to have that in there
11 in order to protect the law. That was --

12 MS. CUMMINGS: Now the other side is suing you.
13

14 MS. BRILL: Yeah, we are dealing with it. We
15 are okay. We are dealing with it, and I actually
16 think that's going to be worked out between the
17 consumer groups and the manufacturers. I think
18 the manufacturers will just give them the
19 information they are seeking.

20 MALE ATTENDEE: And they don't want to shut the
21 operation down?

22 MS. BRILL: No, no. They definitely don't want
23 to shut this down. They definitely don't want to
24 do that.

25 So that was -- I can go into greater depth

1 fact, we have not been subject to a constitutional
2 challenge, but we -- it's resulted in some
3 litigation on the part of consumer groups. Some
4 consumer groups have sued us, and then also sued
5 the manufacturers, because we were not giving them
6 data that the manufacturers were declaring which
7 was trade secret.

8 So we have been working on that issue. We
9 have been working on that lawsuit. It has not
10 affected the functioning of the law, the
11 administration of it or the report. I just
12 thought I would let you know that that's been
13 happening too.

14 MALE ATTENDEE: What kind of gifts would
15 (inaudible).

16 MS. BRILL: Well, the argument is, and I think
17 that that has been asked just that way by some
18 people, that a manufacturer's marketing plan can
19 be easily discerned and figured out if you know
20 which doctors they are seeking expert opinions
21 from, which doctors they are consulting with those
22 kinds of things.

23 We in Vermont have actually a very broad
24 trade secrets law. It covers quite a bit. And
25 what we didn't want to do is wind up in a

1 about this, but I thought I would just move along.

2 MS. CUMMINGS: Any questions from the committee
3 (inaudible)?

4 MS. BRILL: I think it is a great law.

5 Actually, one thing I will say, it is one
6 of the -- there are several of them on the books
7 in other states, but this one is the most advanced
8 and the one that has been functioning the longest.

9 And I go to some conferences where the
10 manufacturers ask me to talk about this law, and
11 the industry asks me to talk about this law. And
12 there is a lot of concern out there in the
13 industry that states are enacting all sorts of
14 different laws with different requirements.

15 And my response is, well, Vermont was
16 first. Vermont is working well. We would be very
17 happy to cooperate with any other state, to tell
18 them what we are doing and give them our
19 guidelines.

20 The difficulty is that in most other
21 states, it's not the Attorney General that's
22 administering the program, it is someone else. So
23 it has been -- it has been hard to coordinate with
24 other states, but there is sort of an interstate
25 issue here.

1 No, that's good, and do you have the other
2 one?

3 MALE ATTENDEE: I don't know, this one?

4 MS. BRILL: That's okay. We were just talking
5 about the gift disclosure law, and this I haven't
6 handed out yet but you can take one.

7 MALE ATTENDEE: That's okay.

8 MS. BRILL: So the next law that I thought we
9 would talk about is the price disclosure law.
10 This one has been interesting.

11 MS. CUMMINGS: Has been a little more
12 difficult?

13 MS. BRILL: This one has presented some issues
14 that we are working on.

15 MS. CUMMINGS: Well, it had issues when we cast
16 it. This is one of the things that sounded so
17 simple.

18 MS. BRILL: I think it is one of those things
19 that sound really simple and it is a great idea,
20 and it is the execution of it that has been
21 interesting.

22 What this law requires, rather, the one
23 that we just talked about requires the
24 manufacturers to report to our office their gifts.
25 And we have this huge database, and we put a

1 did come to was simple.

2 MS. CUMMINGS: Yeah.

3 MS. BRILL: This is different. This deals with
4 detailing and giving the doctors and prescribers
5 some relative information about pricing for drugs
6 in the same therapeutic class.

7 We have heard some complaints from nurses.
8 The information needed to be given to any
9 prescriber is detailed, and a lot of times it
10 appears that the nurses are receiving this
11 information and they are complaining, because they
12 are saying they are getting a stack this big, you
13 know, a stack of materials, and they are not
14 reading it, and they want something that's
15 simpler.

16 And we have been in discussions with
17 various members of the industry, as well as
18 various consumer groups, to try to figure out a
19 more elegant way to do this disclosure.

20 What I passed out for you is the guideline
21 that is currently in operation. In fact, I think
22 we have a meeting Friday to continue some
23 discussions with the industry on this.

24 One of the things that I am thinking would
25 be much simpler is just requiring an average

1 report together.

2 This is a different law. This requires
3 the manufacturers, when they go into a doctor's
4 office, to detail, that is, to market a product,
5 what you all had said you wanted the manufacturer
6 to do was to simultaneously give the doctor some
7 information about relative price so that there
8 would be some understanding about, okay, we are
9 hearing the wonders of this new drug, drug A,
10 which is supposed to be this brand new thing, but
11 how does it stack up in terms of price for other
12 drugs in the same therapeutic class. That was the
13 concept you all had asked us to work on.

14 MS. CUMMINGS: I was thinking of the one that
15 said that the pharmacies had to reveal the retail
16 price.

17 MS. BRILL: We are getting there.

18 MS. CUMMINGS: Okay. That's the next --

19 MS. BRILL: That one hasn't actually -- I don't
20 think that one has been that difficult, but maybe
21 you have heard things that I haven't heard.

22 MS. CUMMINGS: No, just I remember it was very
23 difficult to do.

24 MS. BRILL: It was difficult to come to a
25 solution, but the solution is actually -- that we

1 retail price for other drugs in the same
2 therapeutic class. The manufacturers can go to
3 drugstore.com or whatever source they want, as
4 long as it is the same source, they can come up
5 with an average price of other drugs in that
6 therapeutic class, and they can disclose the price
7 of the product they are marketing. One page, I
8 want it to one page.

9 The industry has said, Well, gee, why
10 don't we just disclose it on the Web? Why do we
11 have to even hand out anything to the doctor? And
12 I think I have been resisting that, and the reason
13 is because I think the legislature generally
14 wanted the doctors to receive something at the
15 time when they receive information about the
16 wonders of the new drugs. That was the intent
17 that I recall during the debate, and so we are
18 sticking with that. We are sticking with the
19 desire to give the doctors something
20 simultaneously at that meeting.

21 MS. CUMMINGS: So you know that this is at or
22 above, below the average price?

23 SPEAKER 9: Who is policing this?

24 MS. BRILL: We are.

25 SPEAKER 9: How do you know that at the time --

1
2 MS. BRILL: Oh --
3 MALE ATTENDEE: Julie is very busy.
4 MS. BRILL: I am very busy. I am going all --
5 no.
6 SPEAKER 9: It just seems --
7 MS. BRILL: We have not heard of lack of
8 compliance in terms of people not giving the
9 information out. What we have heard in terms of
10 complaints is that the nurses, as I mentioned,
11 think that the information is not helpful. They
12 have complained to us about trying to make this
13 more helpful. So what we have been focused on is
14 thinking about the different ways we can make this
15 information more helpful to them.
16 MS. CUMMINGS: Sounds like we told them to give
17 information, and they are giving you --
18 MS. BRILL: Exactly, exactly. They are in -- I
19 am not aware that anyone is out of compliance.
20 There may be some companies out of compliance, but
21 I think the better thing for us to focus, in the
22 Attorney General's Office, our attention on right
23 now is making this a better program so that it
24 works better for the prescriber. That's why we
25 really want to get it to down to one sheet.

1 MS. CUMMINGS: (Inaudible.)
2 MS. BRILL: Yes, exactly.
3 MS. CUMMINGS: (Inaudible.)
4 MS. BRILL: So as I said, we had meetings. I
5 had meetings with various people down at Dartmouth
6 who are thinking a lot about this in terms of
7 trying to come up with creative ways to do this,
8 and we are also meeting with the industry so that
9 effort will continue.
10 Retail prices -- unless there are more
11 questions about this one, the giving information
12 to doctors as we are -- as they are being
13 detailed.
14 Retail prices, yes, a couple of years ago,
15 we came in here and we said we wanted the
16 pharmacies to do Web disclosures, and the
17 pharmacies really resisted that.
18 MS. CUMMINGS: I would say it started out with
19 putting back the signs --
20 MS. BRILL: It may have started out that way.
21 MS. CUMMINGS: It started out with the sign.
22 MS. BRILL: That's right. And no ever liked
23 that sign. Just to give -- you, who are not on
24 the committee, Vermont, years ago, required a
25 poster or something similar to that in all the

1 pharmacies that listed the retail prices of a
2 certain number of drugs, like 100 of them or so.
3 The problem was the posters were being crossed out
4 all the time with new prices being added. It was
5 a mess. The pharmacies hated it. I don't think
6 consumers ever really looked at it. So we -- that
7 was then -- I think it was the Health Department
8 and not AHS, but it was some state agency. Again,
9 I believe it was the Health Department. It could
10 have been the Pharmacy Board. One of them said
11 they were going to no longer require that.
12 We felt that something needed to be
13 disclosed to consumers. If it wasn't going to be
14 the poster, then let's have the pharmacies do a
15 Web disclosure. They very much resisted that in
16 this committee, if I am recalling. So we said,
17 okay, let's require that when a consumer requests
18 the retail information, that they will get it --
19 that they will be given it by the pharmacy; in
20 other words, you go in and you say what's your
21 retail of Lisinopril, the pharmacy will tell you
22 their retail price of Lisinopril or whatever the
23 drug is.
24 MS. CUMMINGS: The problem is that when they
25 got into their computer, they had to put in all of

1 your information and they had to go -- to get to
2 that price, if you asked --
3 MS. BRILL: Right.
4 MS. CUMMINGS: -- they had to actually input
5 your prescription, and then --
6 MS. BRILL: And they weren't giving the price.
7 MS. CUMMINGS: Yeah. And then if you say, oh,
8 because there was a study done and there was a
9 wide swing.
10 MS. BRILL: We did that study.
11 MS. CUMMINGS: Yeah.
12 MS. BRILL: We did that study. Your memory is
13 great on this one. We did that study. We passed
14 it out to you all. We said, Look --
15 MALE ATTENDEE: Who is (inaudible).
16 MS. BRILL: Look at the difference in price --
17 MS. CUMMINGS: If I were knitting, I would
18 remember more.
19 MS. BRILL: That's right.
20 Look at the difference in price. In fact,
21 I could have brought you that study. I didn't
22 bring that, because it has been a few years since
23 we have done that one. But there was a wide
24 disparity in price, and therefore, we said we need
25 to have some disclosure.

1 The pharmacies did say they had some
2 trouble, because typically they liked to give the
3 consumer what the consumer's price would be.

4 MS. CUMMINGS: Right.

5 MS. BRILL: So if you were on Cigna, it would
6 be different than if you are on Medicaid,
7 etcetera, etcetera.

8 We said just give them the retail price.

9 Cash customers, give them the cash price, and
10 that's the law that you all enacted. So if a
11 consumer goes in and asks for the cash price, you
12 know, not on any program or anything like that,
13 just what will it cost me to buy this product
14 cash, they have to tell the consumer what that
15 price is.

16 During that debate, you remember there was
17 a lot of discussions about whether this ought to
18 be put on a Web site, and who ought to be doing
19 that. In -- since that discussion, again, over
20 the last couple of years, a number of Attorneys
21 General around the country have instituted retail
22 Web -- retail price Web sites. So that a consumer
23 can go to their Web site, plug in a drug, one of
24 say 50 or so, and get -- get the retail price.

25 So we thought that was a great idea. We

1 MS. CUMMINGS: Predatory pricing. I heard
2 that, and said that's the death now for your local
3 pharmacists.

4 MS. BRILL: Well, we have not heard that
5 complaint. That doesn't mean that isn't a concern
6 by the pharmacies with respect to that issue, but
7 they have not come to us, and they could come to
8 us, because, of course, we enforce the predatory
9 pricing law.

10 MS. CUMMINGS: Well, who wants to go out there
11 and say you want to stop people from getting \$4
12 drugs?

13 MS. BRILL: Right.

14 \$4 generics?

15 MS. CUMMINGS: Yes.

16 MS. BRILL: And it really is very good for
17 consumers. It really is terrific. And you know
18 what Wal-Mart did is they took a number of drugs,
19 not as many as it seems, because there are all
20 sorts of numbers and dosages -- you know, there
21 was one drug that had five different dosages that
22 was on the list five times, but it became a loss
23 leader for them. They would get somebody in the
24 store, and then the person would buy all sorts of
25 other things.

1 have actually been working on developing that Web
2 site for probably on or off two years.

3 It has been interestingly complex to get
4 it right. We have really been striving to get it
5 right. And we are probably going to be launching
6 that within a couple of months. We will invite
7 you all to the launch. You can see it work. It
8 is actually very neat. It is a very, very neat
9 site.

10 And while the percentage of consumers that
11 are buying drugs at, you know, cash retail is
12 shrinking, especially because of Part D, you know,
13 consumers who are now on Part D as seniors no
14 longer need to pay cash, because they are all --
15 most -- the vast majority of them are on Part D.

16 There is also this other element at the
17 other end of the spectrum, where you have
18 Wal-Mart, and Kmart and these other stores who are
19 now doing the \$4 generics, so we still think there
20 is a strong market for cash, especially at the
21 generic level.

22 MS. CUMMINGS: Is there a concern about price
23 gouging with that? I know -- remember we did a
24 whole thing on unfair competitive practice?

25 MS. BRILL: Predatory pricing you mean?

1 It probably is a phase that ought to be
2 watched in terms of predatory pricing, but we --
3 like I said, that would be the sort of thing that
4 I think the industry, if it were really concerned
5 about that, would at least come to us and say, you
6 know, Attorney General, you should really be
7 looking at this, and we just haven't heard that.

8 So that's what we are doing with respect
9 to retail pricing. You know, again, the Web site
10 will be something that we are hoping will be very
11 helpful. We know that in other states, consumers
12 love them. I mean if they are not paying cash --
13 (Thereupon the CD ended.)

STATE OF VERMONT
SENATE COMMITTEE ON FINANCE

Re: Senate Bill 115

Date: February 6, 2007

COMMITTEE MEMBERS:

SENATOR ANN CUMMINGS, CHAIR

SENATOR CLAIRE AYER, VICE CHAIR

SENATOR MARK MacDONALD, CLERK

SENATOR BILL CARRIS

SENATOR JAMES CONDOS

SENATOR HULL MAYNARD, JR.

SENATOR RICHARD McCORMACK

CD No: CD 2007 36

Esquire Job #928011

Page 2

1 ---
2 PROCEEDINGS
3 ---

4 CD No.: CD 2007 36

5 MS. BRILL: -- in terms of best dealing with
6 pharmaceutical companies, but we were very pleased
7 that both Dartmouth and UVM submitted application
8 for money under this national program, and this
9 money comes as a result of a settlement with
10 Pfizer over some inappropriate marketing that it
11 was engaged in back in the late 90's and early
12 2000's.

13 So that's something that we are very
14 involved in, in dealing with that program, and
15 actually, we are about to launch a consumer grant
16 round where consumer groups are applying to
17 educate consumers about pharmaceutical projects --
18 excuse me. Pharmaceutical efforts and marketing
19 direct-to-consumer advertising, that kind of
20 thing. And we will be awarding a grant
21 probably -- one or more grants in a few months.

22 So the -- the last thing I thought I would
23 talk about, I think Bill Strull (phonetic) also
24 mentioned that in 2005, when he was president of
25 the National Association of Attorneys General, we

Page 4

1 are involved in to deal with pharmaceutical
2 pricing.

3 There is a chart in back, and you know, we
4 have worked with Sharon Shreet (phonetic) to keep
5 that as up to date as we can. And I actually do
6 have a new chart that I am working in terms of
7 current efforts that states are involved in.

8 So there is some pretty high powered
9 thinkers that are described -- their thoughts are
10 described in this report dealing with, as I said,
11 like I said, research and development. We have
12 Marsha Angel giving a -- wrote a piece in here.
13 She is a doctor at Harvard Medical School, and
14 someone who has written a lot about research and
15 development. She actually has a book on it. We
16 have got -- we had Jerry Avorn (phonetic) and
17 Jerry Casamer (phonetic). These are leading
18 thinkers on marketing to doctors, leading national
19 thinkers.

20 So, anyway, you know, when you are having
21 trouble going to sleep some night as you are
22 sitting in a hotel room up here, maybe it will be
23 something that you might want to look through.

24 MR. MacDONALD: (Inaudible.)

25 MS. BRILL: What did you say, Mark?

Page 3

1 did a report on pharmaceutical pricing, and this
2 is the report, and it is actually, I think, still,
3 even though it is -- almost two years old, it has
4 a lot of interesting information in it.

5 So we did bring one copy for every member
6 of the committee, and I thought I would tell you
7 that we are working on updating that now.
8 Probably will come out late spring, early -- early
9 summer. But this report has a section on research
10 and development, and what kind of -- what costs
11 are added to the price of prescription drugs as a
12 result of research and development, and is that
13 rational or irrational. It talks about
14 direct-to-consumer advertising. It talks about
15 marketing to doctors. It talks about
16 international pricing and how other countries do
17 pricing in pharmaceuticals.

18 We brought in national and inter --
19 actually, international experts to a conference
20 that we had in January of 2005, and they spoke on
21 all these different issues. And this report is a
22 culmination of that conference and what was said
23 and talked about. But also, at the end of the
24 report, we have a list of the kind of efforts that
25 other -- that states generally, including Vermont,

Page 5

1 MR. MacDONALD: (Inaudible) prescribe this.

2 MS. BRILL: That's right. The (inaudible)
3 prescribing for insomnia.

4 MR. MacDONALD: One page takes a long time.

5 MS. BRILL: It is thick, but actually it does
6 have a lot information.

7 SPEAKER 4: It has got lots of pictures.

8 MS. BRILL: We tried to make it with some
9 pictures and wide space.

10 Anyways, as I said, we are updating that.
11 That's a new effort that is underway.

12 SPEAKER 4: I don't know that I have seen that.

13 MR. MacDONALD: Why don't we wait? I think
14 they are just trying to hand these out.

15 MS. BRILL: No, no. These are a hot commodity.
16 You can sell them on a E-bay for a lot of money.
17 No, just kidding.

18 SPEAKER 4: Inaudible.

19 MR. MacDONALD: Inaudible.

20 MS. BRILL: The update that we are working on
21 will be different in the sense that we will really
22 be focusing in the version on what states are
23 currently doing, and making recommendations of
24 what states ought to be doing. This is more
25 descriptive of some of the problems that are out

1 there with respect to pharmaceutical pricing, so
2 to give you background and an overview, and then
3 at the end it talks about what states are doing,
4 but it doesn't focus on that. So we are going to
5 pick up where that one left off.

6 SPEAKER 4: You should probably develop a
7 reading list for members of this committee before
8 sending it out in November.

9 MS. BRILL: Yeah.

10 SPEAKER 4: That would be build up.

11 MS. BRILL: That would be -- we would be more
12 than happy to help you with that.

13 SPEAKER 4: I am sure.

14 MR. MacDONALD: I am sure.

15 MS. BRILL: Anyway, that was all I thought that
16 you might want to hear from me today. I know that
17 you had people come in to talk about different
18 things that states are doing, and I have all the
19 material that they submitted to you. And, you
20 know, if you want me to at sometime in the future,
21 I would be happy to react to that list and tell
22 you some of the things that we think make sense,
23 what we have been hearing out here, but today I
24 just thought I would talk about what we have been
25 working on here.

1 SPEAKER 4: We have done at least twice, at
2 least that I can remember.

3 Some of the price gouging, you know, tying
4 prices to -- was one we talked about, and the
5 third was talking perhaps with you about any
6 interest in allowing the Attorney General to
7 enforce the advertising laws.

8 MS. BRILL: Oh, the federal advertising laws.

9 SPEAKER 4: Yeah, because we know we cannot ban
10 Platzberg (phonetic) from being here.

11 MS. BRILL: Right, right, right. Okay. That's
12 interesting. I am going to look through her whole
13 list, and I will look through my list, and I will
14 let you know what else has been done out there.
15 Know, Maine has done a clinical trial registry,
16 for instance.

17 SPEAKER 4: There is talk -- there is a lot of
18 interest also in -- is it Colorado where they are
19 trying to do an efficacy, you know, this drug may
20 cost 10 percent more --

21 MS. BRILL: Oh.

22 SPEAKER 4: -- but it is 40 percent more
23 effective.

24 MS. BRILL: Absolutely, right. It is only --
25 Consumer's Union actually has a program that, you

1 SPEAKER 4: Okay.

2 Are you prepared to talk about that at
3 all, because you got probably a half hour?

4 MS. BRILL: I just don't -- I have the
5 materials. I just haven't gone through them, I am
6 sorry.

7 SPEAKER 4: Okay. No. No problem.

8 Because it looks like the pharmacy bill is
9 at least fast-tracked in this committee. We have
10 been -- I think I met with Senate Health and
11 Welfare this morning, and since this committee has
12 done PBM legislation a number of times, we might
13 be able to do that a little more quickly than his
14 committee, and you know, start the bill here. We
15 are starting with a recommendation Sharon Shreet
16 gave us last time, and then we will bring it out
17 to this committee.

18 MS. BRILL: What would be the areas that you
19 are thinking at this time of focusing on or have
20 you not decided yet?

21 SPEAKER 4: Well, the pharms again --

22 MS. BRILL: The PBMs?

23 SPEAKER 4: The PBMs, the transparency, and the
24 fiduciary.

25 MS. BRILL: Right.

1 know, they have best buy, and they are doing that
2 now for drugs, you know, what is a best buy drug,
3 you know, what is the best for your dollar, best
4 value for your dollar. I think that makes a lot
5 sense. The clinical trial registry, I only
6 mention it because I am not sure we ought to do
7 that.

8 SPEAKER 4: Okay.

9 MS. BRILL: If Maine is doing it, I am not sure
10 two states need to do it. If you have one up
11 there, why do you need two. And if you don't know
12 what a clinical registry is, I can explain it to
13 you.

14 SPEAKER 4: I remember Sharon mentioning it,
15 but it didn't make it, I don't think, to the paper
16 just yet.

17 MS. BRILL: Yeah, and I can explain that to you
18 at some other time. It just seems to me it is a
19 lot of work, and it is a great effort. In other
20 words, you are letting consumers know about all
21 the clinical trials that are out there and what
22 the results are, and it is really -- it is
23 actually really meant more for prescribers than it
24 is for consumers.

25 SPEAKER 4: Yeah.

Page 10

1 MS. BRILL: So they can know, well, gee, there
2 was a study done, and oh, this product wasn't as
3 effective as we thought it was, but I am --

4 SPEAKER 4: Even if it is for a disease I don't
5 have.

6 MS. BRILL: Right.

7 SPEAKER 4: I am just thinking of all the --

8 MS. BRILL: Right.

9 SPEAKER 4: -- about all the stories about
10 people going with the list of things from the TV
11 they are supposed to --

12 MS. BRILL: Exactly. It really is for
13 prescribers, but my view is that's the kind of
14 thing if one state does it and does it well,
15 that's sufficient. You don't need to have two Web
16 sites where Vermont is duplicating what Maine has
17 done. We can just send people to Maine's Web
18 site. Why recreate the wheel, if they do it
19 right. But I -- let me take a more --

20 SPEAKER 4: Take a look at that.

21 MS. BRILL: -- take a look at the list, and I
22 will get through it. And I certainly was involved
23 in the PBM discussions previously.

24 SPEAKER 4: Yes.

25 MS. BRILL: So I would be happy to do it again.

Page 12

1 committee has been really good about being here.

2 MS. BRILL: Good.

3 SPEAKER 4: We are used to last year, between
4 health issues, campaign issues, having many empty
5 seats at this table, so it has been a pleasure
6 this year.

7 MS. BRILL: Great.

8 SPEAKER 4: So it's been good.

9 MS. BRILL: I am nearby, so any questions --
10 and I will come back when you guys want to talk
11 about that.

12 SPEAKER 4: Okay.

13 MS. BRILL: I am ready to do that. So thank
14 you.

15 SPEAKER 4: That may be sooner rather than
16 later.

17 MS. BRILL: Perfect. I am around.

18 SPEAKER 4: Okay.

19 MS. BRILL: Thank you.

20 (Thereupon the proceedings concluded.)

Page 11

1 SPEAKER 4: Makes sense to probably do it
2 (inaudible).

3 MS. BRILL: That's right. That's right.

4 SPEAKER 4: But I think finding out what has
5 happened, you know, we sense some movement from
6 the industry, and you know, perhaps that movement
7 is enough, but we will look at it.

8 The other one was --

9 MS. BRILL: The prescription privacy issue? Is
10 that something you guys --

11 SPEAKER 4: That came up, and it is slipping my
12 mind, but we want to just take a look at what is
13 out there.

14 MS. BRILL: Sure, sure.

15 SPEAKER 4: Probably put it together in a
16 committee bill. If the memorandum is right, we
17 can do one and they can't. You know, and it is
18 just no decision, it is just what -- the new
19 thoughts, what sounded interesting.

20 MS. BRILL: Great. That sounds perfect, and I
21 apologize for not being ready to do that today.

22 SPEAKER 4: We didn't ask you to be ready.

23 MS. BRILL: Right.

24 SPEAKER 4: We just -- we are still scheduled
25 for a less efficient committee or something. This
