The National Security Commission on Artificial Intelligence (NSCAI) was established by the Fiscal Year 2019 John S. McCain National Defense Authorization Act. In that legislation, Congress requested an initial report from the Commission within 180 days of the NDAA’s enactment. The following update responds to that request.

Background

The NSCAI is comprised of fifteen Commissioners, led by Chairman Eric Schmidt and Vice Chairman Robert Work. Commissioners were appointed by Members of Congress and by the Secretaries of Defense and Commerce. The Commission is bipartisan and commissioners are drawn from across the country. They bring broad and deep expertise in the private sector, academia, and government. The NSCAI mandate is to “consider the methods and means necessary to advance the development of artificial intelligence, machine learning, and associated technologies by the United States to comprehensively address the national security and defense needs of the United States.” All Commissioners and the Commission staff are committed to collaborating with, and providing timely recommendations to, Congress and the executive branch.

Initial Activities

The Commissioners met and began to work in earnest in March 2019, and most of the Commission staff was appointed by late April. During these early months, the Commissioners and staff have focused on surveying the AI landscape, and have held three plenary meetings:

- **Plenary #1**: The Commission’s first meeting was held on March 11 in Arlington, VA. Senator Martin Heinrich and Representatives Elise Stefanik and Jerry McNerney participated. They laid out their expectations and recommendations for the Commission, and expressed strong support for our mandate. Commissioners received briefings from the Defense and Commerce Departments and from the Intelligence Community.

1 H.R. 5515, Sec. 1051(c)(1).
2 Other commissioners include Safra Catz, Steve Chien, Mignon Clyburn, Chris Darby, Ken Ford, Jose-Marie Griffiths, Eric Horvitz, Andy Jassy, Gilman Louie, William Mark, Jason Matheny, Katharina McFarland, and Andrew Moore.
3 H.R. 5515, Sec. 1051(b)(1).
• **Plenary #2:** The Commission convened on May 20 in Cupertino, CA. Commissioners were briefed on U.S. Government policies and perspectives, including from the White House Office of Science and Technology Policy, the National Security Council, and the Defense Department’s Office of Net Assessment.

• **Plenary #3:** The third meeting, also held in Cupertino, CA, featured briefings from the Intelligence Community, the Federal Bureau of Investigation, and the National Security Council.

At the first meeting, commissioners decided to meet in plenary every other month, and organize themselves into four working groups focused on key areas to examine in detail. Each working group meets monthly, and will enumerate objectives, assess current challenges, and develop recommendations for consideration by the entire Commission. The preliminary results of the working group assessments will form the basis of the Commission’s Interim Report to Congress in fall 2019.

• **Working Group #1—Maintaining U.S. Global Leadership in AI Research.** The first group is focused on how the U.S. Government, through policy reforms, incentives, or appropriations, can help accelerate academic research and commercial innovation in AI.

• **Working Group #2—Maintaining Global Leadership in AI National Security Applications.** The second group is focused on how the U.S. Government can adopt AI applications at speed and scale through policy, process, governance, and organizational reforms to protect U.S. national security.

• **Working Group #3—Preparing Our Citizens for an AI Future.** The third group is focused on how to overcome challenges and develop incentives to build a world-class, AI-ready national security workforce.

• **Working Group #4—International Competitiveness and Cooperation in AI.** The fourth group is considering ways to enhance U.S. global competitiveness, leverage our alliances, and establish norms that advance U.S. values and interests.

Commissioners have also decided to pursue Special Projects on three cross-cutting issues: 1) harnessing AI through public-private partnerships, 2) pursuing the responsible and ethical use of AI for national security, and 3) managing data to support AI applications.

As of July 11, 2019, the Commission has held nine working group meetings. From March to July, the Commissioners and staff have received over 100 briefings, both unclassified and classified, on a wide range of government, academic, and commercial topics related to AI.
Relationship to Ongoing USG Efforts

The Commission is working in close collaboration with the White House, the National Security Council, the Office of Science and Technology Policy, executive departments and agencies, and Congress, to ensure that the many ongoing U.S. Government efforts in AI are complementary and reinforcing. Ultimately, these efforts should produce a comprehensive and enduring national approach to maintaining America’s AI advantages in the realm of national security. The Commission is pleased to report an exceptional level of cooperation we have seen from other U.S. Government offices working on issues relevant to the Commission’s work.

Major U.S. Government efforts include: the February 2019 Executive Order on Maintaining American Leadership in Artificial Intelligence; the National Security Presidential Memorandum on Protecting the United States Advantage in Artificial Intelligence and Related Critical Technologies; the National Science and Technology Council’s National Artificial Intelligence Research and Development Strategic Plan 2019 Update; the Department of Defense’s 2018 AI Strategy; the Office of the Director of National Intelligence’s AIM Initiative; and the Department of Energy’s AI initiatives.

 Relationship with Industry and Academia

The Commission is committed to understanding a range of perspectives from outside of government. Given the central role of universities, research centers, and private enterprises in AI innovation, the NSCAI will ensure that expertise and insights from these arenas are integrated into the Commission’s work. Toward that end, the Commission has held engagements with a wide range of academic and private sector groups, and we have enlisted leading figures in the AI field to serve as advisors or to offer their perspectives to the Commission.

Ethics and Responsible Use

The Commission is firmly committed to integrating ethical considerations into all components of its analysis and research. The Special Project on AI ethics is convening experts across the range of ethicists in the private sector, academia, and within government, and it is working closely with Defense Innovation Board’s AI Principles Project.

Commission Staff

---

The Commission is supported by a strong staff of about 20, including direct hires and detailees from the military services and government agencies. The staff is organized into three teams, focused on research and analysis, outreach and engagement, and operations. The staff frames questions, convenes experts, manages day-to-day relations with counterparts in and out of government, and prepares the commissioners for their regular meetings as the NSCAI moves toward its Initial Report.

Next Steps

- The Commission will continue to carry out the assessment phase of its work, which should be complete by November 2019. At that time, the Commission will submit an Interim Report to Congress on its initial findings and judgments.
- The delivery of the Interim Report marks the shift to the Commission’s analysis phase, which will take up much of 2020. The analysis phase will be followed by a final phase of work focused on consolidating the Commission’s findings and refining its final recommendations.
- Then, we will move into an analysis phase for much of 2020, followed by a final phase of work focused on consolidating our findings and refining our recommendations.
- Following the successful June 28, 2019 engagement with House and Senate staff led by the Commission’s Chair and Vice Chair, the Commission will seek further opportunities to consult with Congress throughout the course of our work.
