Subject: Draft Aviation Security Report

All,

Attached is a draft report of what we have done to date in aviation security. Please provide your comments to me. I am currently on vacation, so will not address any of these issues until I return on November 4 or 5. I would appreciate it if you could use change tracking so that I can see what was done. I would like to keep this report to about 10 to 12 pages so that it will be sufficiently short that people might actually read it. Also, while this report is in response to Huy and will be given to our CICT sponsors, I would like this report to be something that could be sent to those at NASA HQ or perhaps even TSA who may be interested in what NASA has been doing in aviation security.

Thanks for your comments.

Subject: Now with Attachment: Final Opportunity to Comment on Automated Passenger Threat Assessment and Security Reporting Accomplishments to Date

All,

Lets try this again with the attachment.

I finally had time to get back to this report and included the ASRS material. I also made some slight updates to show that we now have iris scanning working in the lab and to clean up some wording. I left change tracking on so that you can see what has been accomplished by everyone since the last version.

I have changed the date to December 16, with the goal of shipping this out to the CICT program managers and my management on that date. Since this report is currently the best summary of what we have done, please feel free to update this with any recent results from your areas, such as data mining or others. As far as I am concerned, anything that we have accomplished prior to the December 16 data is fair game for inclusion in this report.

I would like to have all input by close of business on Thursday December 12, so that I can modify the report and have it ready to deliver on December 16. If you do not have any additional input, please let me know. If I hear from everyone prior to Thursday, I will change the date of the report and ship it out earlier.

Thanks.

tom

Document No. 4

From: Thomas H. Hinke <Thomas.H.Hinke@nasa.gov>
Date: Tue Feb 4, 2003 2:14:39 PM US/Pacific
To: Mark Schwabacher <schwabac@email.arc.nasa.gov>
Subject: Fwd: N258 Room 235 request

Mark,

I just got the following message from one of the branch chiefs here in the division, asking for the use of the Aviation Security Lab rooms for some March Collaborative technology demo for Dave Korsmeyer. Unless you see some basis for refusing this request, I am inclined to say yes. However, before saying yes, I would like to see that all of the Northwest Airlines' CD's are taken out of the room and secured in a locked area.

So, my first question is do you want to take control of this data, or do you want me to take care of it? If possible I would like to see this data removed today, since things can move pretty fast around here.

The second question is whether there is any Northwest data on any computer in the lab that needs to be secured. I was of the opinion that the quad processor system had not been loaded with any data, so it should be clean, but I just wanted to make sure.

Reply-To: <Hugh.LaMaster-1@nasa.gov>

I would like to be able to use the Room 235 Area (has been assigned to Aviation Security) for the March Collaborative Technology demo of HDTV between ARC and JPL. Is the Aviation Security initiative still actively using it? The rooms are the correct size for this demo. The ARC customer is Dave Korsmeyer.

Subject: N258 Room 235 request
Reply-To: <Hugh.LaMaster-1@nasa.gov>

I would like to be able to use the Room 235 Area (has been assigned to Aviation Security) for the March Collaborative Technology demo of HDTV between ARC and JPL. Is the Aviation Security initiative still actively using it? The rooms are the correct size for this demo.

The ARC customer is Dave Korsmeyer.

Yes, I meant to say that in the Aviation Security Lab, only the PC attached to the jukebox had PNR data stored on it.

All,

So, for the machines in the lab, it looks like only the PC attached to the laptop had PNR data on it.

Thanks.

Mark,

I would send it US postal service registered, return receipt requested since this is sensitive data and registered will provide protection. I would not think that you would get billed for this, or if so, I would think it would come out of the division budget. I would be surprised if we were talking more than \$50 at most. I would be surprised if your division would have a problem with this small amount of money.
