April 5, 2019

The Honorable Janice D. Schakowsky, Chair
The Honorable Cathy McMorris Rodgers, Ranking Member
U.S. House Committee on Energy and Commerce
Subcommittee on Consumer Protection & Commerce
2125 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairwoman Schakowsky and Ranking Member McMorris Rodgers:

We write to you regarding the hearing on “Protecting Americans from Dangerous Products: Is the Consumer Product Safety Commission Fulfilling Its Mission?”1 American consumers face unprecedented privacy and security threats from Internet-connected devices. The unregulated collection of personal data and the growth of the Internet of Things (“IoT”)2 has led to staggering increases in identity theft, security breaches, and new cybersecurity threats. The CPSC should regulate Internet-connected devices. Privacy and security are integral to consumer safety.

EPIC is a public interest research center established in 1994 to focus public attention on emerging privacy and civil liberties issues.3 EPIC is a leading advocate for consumer privacy, and has led the effort to establish the authority of the Federal Trade Commission (“FTC”) to safeguard consumer privacy and more recently to explore the impact of the Internet of Things.4 EPIC also urged the Consumer Product Safety Commission (“CPSC”) to address the hazards of weak privacy and security in IoT products.5

Today, the IoT network is the weak link in consumer products. IoT devices track personal data generated by consumers’ activities and lifestyles. IoT devices pose significant privacy concerns that could threaten physical danger.

EPIC brought the Google Home Mini complaint6 to the CPSC precisely because the design defect of the consumer device created a specific risk to consumers. The Acting Chairman of the

2 EPIC, Internet of Things (IoT), https://epic.org/privacy/internet/iot/.
CPSC responded to EPIC, stating that “CPSC’s authority will not generally extend to situations solely related to consumer privacy or data security, that do not pose a risk of physical injury or illness, or property damage.”

The CPSC response reflects a profound lack of understanding about the IoT and the new threats facing consumers. As renowned security expert Bruce Schneier has said: “The Internet is dangerous—and the IoT gives it not just eyes and ears, but also hands and feet. Security vulnerabilities, exploits, and attacks that once affected only bits and bytes now affect flesh and blood.”

Hackers, criminals, and foreign adversaries exploit IoT vulnerabilities to launch network attacks that cause millions of dollars in damage and have devastating impacts on real people. Hackers could conceivably exploit vulnerabilities on “smart” refrigerator to carry out a denial of service attack against the network of a city or hospital. In the past few months alone there have been several such attacks. A ransomware attack known as SamSam took down the entire municipality of Farmington, New Mexico and two hospitals by exploiting vulnerabilities in IoT devices. The city of Atlanta spent 2.6 million dollars to recover from a ransomware attack that impacted municipal functions including the Police Department and the judicial system. It would defy reason to say that unsecured IoT devices do not harm consumers.

Privacy and security hazards should be regulated in the manufacture and design of consumer products. Companies have little incentive to maintain strong standards without regulation. And consumers do not have enough information to evaluate the privacy and security of these products themselves. This has alarming implications for toys that target children’s data, and internet-connected home systems like smoke detectors and security cameras.

Therefore, manufacturers—not consumers—must bear the responsibility to ensure the security of their products. We agree with the UK Government’s assessment that “There is a need to move away from placing the burden on consumers to securely configure their devices, and instead ensure that strong security is built in by design.”

9 Bruce Schneier, Click Here to Kill Everyone, N.Y. Magazine (Jan. 27, 2017), http://nymag.com/selectall/2017/01/the-internet-of-things-dangerous-future-bruce-schneier.html (describing an attack that used millions of DVRs and other insecure IoT devices to take down Twitter, Netflix, Reddit, and other sites down from the internet).
13 UK Department for Digital, Culture, Media & Sport, Secure by Design: Improving the cyber security of consumer Internet of Things Report (March 2018),

EPIC Statement
House E&C Committee

CPSC
April 5, 2019
Current voluntary standards are lax. And current safety regulations are outdated. They are not adequate to address the security hazards of IoT devices. The CPSC should establish mandatory privacy and security standards, and require certification to these standards before IoT devices are allowed into the market stream.

The code of practice proposed by the UK government serves as a useful framework for security standards for IoT. In particular, manufacturers should adopt the following:\(^{14}\)

1. No default passwords
2. Implement a vulnerability disclosure policy
3. Keep software updated
4. Securely store credentials and security-sensitive data
5. Communicate securely
6. Minimize exposed attack surfaces
7. Ensure software integrity
8. Data protection
9. Make systems resilient to outages
10. Monitor system telemetry data
11. Make it easy for consumers to delete personal data
12. Make installation and maintenance of devices easy
13. And validate input data

This guidance necessitates privacy and security by design. If the CPSC implements this code of practice, it will shift the responsibility of product safety back to manufacturers where it belongs.

Congress should act to empower regulators to protect consumers from the risks posed by the IoT. We ask that this letter be entered in the hearing record. EPIC looks forward to working with the Subcommittee on these and other issues impacting the privacy and security of American consumers.

Sincerely,

Marc Rotenberg
