

August 21, 2018

The Honorable John Thune, Chairman
The Honorable Bill Nelson, Ranking Member
U.S. Senate Committee on Commerce, Science, & Transportation
512 Dirksen Senate Office Building
Washington, DC 20510

Dear Chairman Thune and Ranking Member Nelson:

We write to you in advance of the Nominations Hearing for Dr. Kelvin Droegemeier, of Oklahoma, to be the Director of the Office of Science and Technology Policy.¹ We express no views for or against the nominee, but we believe it is vitally important for the OSTP to begin a public consultation on the future of Artificial Intelligence.

EPIC, leading scientific organizations, including AAAS, ACM and IEEE, and nearly 100 experts recently urged the White House to solicit public comments on artificial intelligence policy in a petition to the Office of Science and Technology Policy.² We sent the petition to the OSTP because that is the agency that the White House designated to lead the Administration's work on this topic. However, the current structure excludes public participation and has already failed to identify key issues that the nation should consider as Artificial Intelligence plays a greater role in our lives. The OSTP should recommend, and Congress should implement, extensive oversight mechanisms to oversee the use of AI by federal agencies to require algorithmic transparency, particularly for government systems that involve the processing of personal data.

The Electronic Privacy Information Center ("EPIC") is a public interest research center established in 1994 to focus public attention on emerging privacy and civil liberties issues.³ EPIC has promoted algorithmic transparency⁴ for many years and has litigated several cases on the frontlines of AI in the federal government.⁴ EPIC successfully sued U.S. Customs and Border Protection for documents relating to its use of secret, analytic tools to assign "risk assessments" to U.S. travelers.⁵ In *EPIC v. DHS*, EPIC sought to compel the Department of Homeland Security to produce documents related to a program that assesses "physiological and behavioral signals" to determine the probability that an individual might commit a crime.⁶ EPIC also sued the Department

of Justice to produce documents concerning the use of “evidence-based risk assessment tools,” algorithms that try to predict recidivism, in all stages of sentencing.⁷ The algorithms at issue in these three lawsuits are examples of problematic uses of AI by the federal government.

These problems could now become more widespread across the federal government. On May 10, 2018 the White House held a summit on “Artificial Intelligence for American Industry.”⁸ According to the OSTP summary report, the participants discussed “the promise of [artificial intelligence] and the policies we will need to realize that promise for the American people and maintain U.S leadership in the age of artificial intelligence.”⁹ However, the meeting was not open to the public and many critical issues in the AI-field were not discussed.

For example, the words “accountability,” “transparency,” “ethics,” and “fairness” do not appear in the report of the White House AI summit.¹⁰ The only reference to “privacy” is an assurance that personal data can be opened to research without compromising privacy. There is a similar assurance about public safety.¹¹

At the summit, the White House also announced the creation of the Select Committee on Artificial Intelligence.¹² According to the charter, the Select Committee will:

address significant national and international policy matters that cut across agency boundaries and shall provide a formal mechanism for interagency policy coordination and the development of Federal artificial intelligence activities, including those related to autonomous systems, biometric identification, computer vision, human-computer interactions, machine learning, natural language processing, and robotics.¹³

Despite the broad social implications of these topics, the Charter identifies only the “private sector” as a source of advice. Unless the channels of input are formally broadened and deepened substantially, the Select Committee will fail to understand and mitigate the risks of AI deployment.

Several professional organizations have developed significant policy frameworks to help policymakers understand and assess AI technology. For example, the Association for Computing Machinery’s (“ACM”) Statement on Algorithmic Transparency and Accountability states that, “the ubiquity of algorithms in our everyday lives is an important reason to focus on addressing challenges

associated with the design and technical aspects of algorithms and preventing bias from the onset.”¹⁴ The IEEE-USA stated in 2017 that, “Effective AI public policies and government regulations are needed to promote safety, privacy, intellectual property rights, and cybersecurity, as well as to enable the public to understand the potential impact of AI on society.”¹⁵

Leading computer scientists and legal scholars have expressed concern that the development of the nation’s policy for Artificial Intelligence should be more open and more inclusive. There are several related issues for OSTP and the Select Committee to consider:

- (1) What potential harms arise from the use of AI and how are these risks currently addressed?
- (2) What are the legal frameworks currently governing AI, and are they adequate?
- (3) How could companies and government agencies be more transparent in the use of AI?
- (4) What technical measures could promote the benefits of AI while minimizing the risks?
- (5) What experience have other countries had trying to address the challenges of AI?
- (6) What future trends concerning AI could inform the current discussion?

EPIC and others in the scientific and legal community have urged the Office of Science and Technology Policy to establish a public comment process for the Administration’s work on AI.¹⁶

Dr. Droegemeier should be asked what steps the OSTP will take to ensure public participation in the development of AI policy.

* * *

Democratic governance is built on principles of procedural fairness and transparency. And accountability is key to decision making. We must know the basis of decisions made by government, whether right or wrong. But as decisions are automated, and organizations increasingly delegate decision making to techniques they do not fully understand, processes become more opaque and less accountable. It is therefore imperative that algorithmic processes be open, provable, and accountable.

When the government uses AI to make decisions about people, it raises fundamental questions about accountability, due process, and fairness. Algorithms deny people educational opportunities, employment, housing, insurance, and credit.¹⁷ Many of these decisions are entirely opaque, leaving individuals to wonder whether the decisions were accurate, fair, or even about them.

¹⁷ Danielle Keats Citron & Frank Pasquale, *The Scored Society: Due Process for Automated Predictions*, 89 Wash. L. Rev. 1 (2014).

The Privacy Act of 1974, which governs data processing across the federal government, sought to ensure fairness and accountability in the government’s use of personal data.¹⁸ But many new activities, including AI-based analysis, may fall outside the reach of the law.

The Department of Homeland Security released a white paper last year outlining potential uses of AI techniques.¹⁹ DHS proposed the development of predictive systems to assess future risk. A similar proposal a few years ago – The Future Attribute Screening (“FAST”) – was developed to detect “malintent.” The program collapsed after it became clear the system would not work.²⁰

DHS also proposed to use social media analytics to predict human behavior to counter violent extremism.²¹ Algorithms are simply not equipped to understand the nuances of online communication and make positive or negative determinations about individuals.²² Government scrutiny of social media accounts also chill First Amendment-protected activities. When DHS previously monitored social media for criticism of the agency, Congress held hearings and the program was suspended.²³

Congress should regulate the use of AI by the federal government to ensure accountability and transparency. EPIC supports legislation that would do the following:

- Establish a **Commission on AI Accountability and Algorithmic Fairness**. New York City recently passed legislation establishing an Algorithmic Accountability task force that could serve as a helpful model for the federal government.²⁴
- Amend the **E-Government Act** to require an **Algorithmic Fairness Assessment** any time an agency newly develops, implements, or relies on an algorithmic decision tool that implicates personally identifiable information. The Assessment should require disclosure of the logic of algorithms that make determinations about individuals.

²⁴ EPIC, *NYC Establishes Algorithm Accountability Task Force* (Dec. 21, 2017), <https://epic.org/2017/12/nyc-establishes-algorithm-acco.html>.

- Amend the **Privacy Act** to require publication of an **Algorithmic System Notice** any time an agency newly develops, implements, or relies on an algorithmic decision tool that implicates personally identifiable information.
- Amend the **Privacy Act** to allow any person affected by a rule, policy, or action of an agency—where such decision was made by or with the assistance of an algorithmic decision tool—to request and receive an explanation of that rule, policy, or action and the basis for it.
- Amend the **Freedom of Information Act** to clarify that (b)(4) does not exempt algorithmic decision tools/rule-based techniques from disclosure, even if they would otherwise constitute trade secrets.

We do recognize the value of AI techniques for a wide range of government programs. But government activities that involve the processing of personal data trigger specific legal obligations; the use of new techniques will raise new challenges that OSTP will need to contend with.

We ask that this Statement from EPIC be entered in the hearing record. We look forward to working with you on these issues of vital importance to the American public.

Sincerely,

/s/ Marc Rotenberg
